

# 3M™ Surgical Drapes

*Drape Selection Guide*

orthopaedic • cardiovascular • OB/GYN • urology

DRAPES THAT FIT ACCEPT NOTHING LESS

ophthalmic • EENT • neurology • general • equipment

# Setting 3M apart from the competition:

## 3M™ Steri-Drape™ Absorbent Prevention Fabric

- Low-linting, nonwoven, absorbent fabric laminated to a plastic film.
- Soaks up spills and splatters.
- No fluid strike-through.
- Absorbent throughout the entire drape, eliminates the need to define a “critical zone.”
- Meets Flammability Class 1 (CFR Title 16 Part 1610)

## 3M™ Ioban™ 2 Antimicrobial Incise Film

- Continuous broad-spectrum antimicrobial activity in the drape adhesive where it can't be washed away.
- Clinically proven to help reduce the risk of wound contamination and bacterial migration.
- Adheres better to skin than other incise drapes.

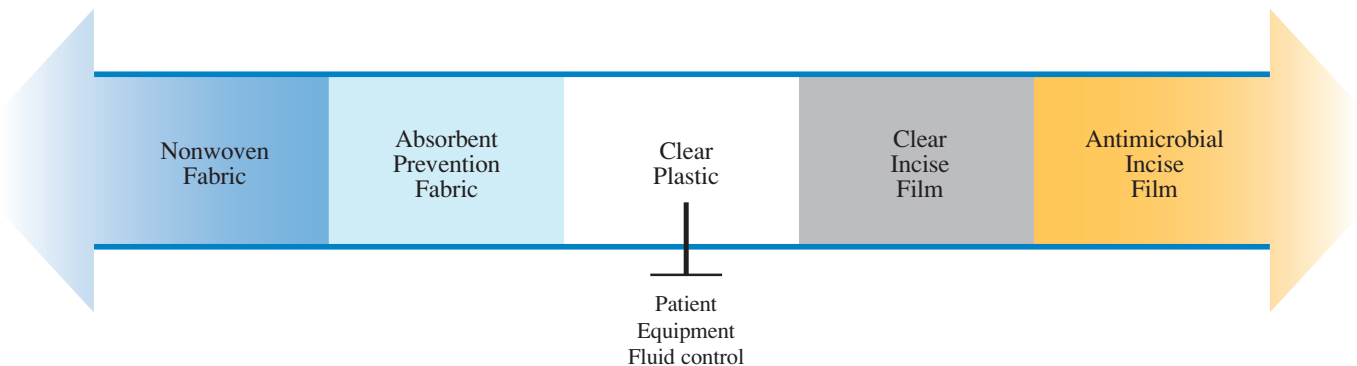

3M™ Incise Drapes create a sterile surface and act as a barrier to prevent skin flora from migrating to the incision.

## From the leader in medical films and adhesives

3M is a worldwide leader in film and adhesive technology. The medical films and adhesives featured in our drapes are some of the most dependable on the market today.

3M's expertise in adhesives, coatings, film and nonwoven technologies allows us to create a full line of drapes with the features most important to surgical teams. From our breathable, nonwoven “fabric” drapes to our antimicrobial incise drapes and everything in between, you'll find a 3M drape with the features you need to help create the sterile environment necessary for better patient outcomes.

# 3M™ SURGICAL DRAPES

*A line of drapes designed with the six principles of draping in mind*

Whether a surgery is performed in a traditional operating room, an ambulatory surgery center or a physician's office, you can be sure of one thing: one or more surgical drapes will be used. And every drape used during that procedure will address one or more of the six basic draping objectives or "principles." 3M offers many single-use, disposable surgical drapes to meet these principles:

## 1. Isolation

Isolating dirty, contaminated areas from clean areas.

## 2. Barrier

Preventing fluid penetration.

## 3. Sterile Field

Creating a sterile operative environment by aseptic application of sterile materials.

## 4. Sterile Surface

Creating a sterile surface on the skin which acts as a barrier to prevent skin flora from migrating to the incision site.

## 5. Fluid Control

Channeling and collecting body and irrigation fluids.

## 6. Equipment Draping

Allowing non-sterile equipment to be brought into the sterile field.
