CANPLAS® PLUMBING SOLUTIONS

What's keeping this...

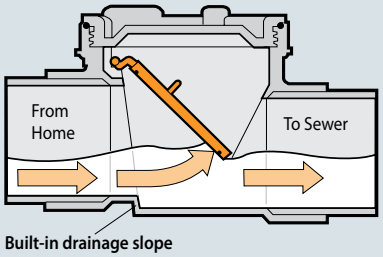
out of this?

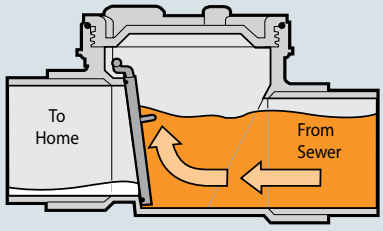
A canplas® Backwater Valve

New! DWV pipe can now be solvent welded to the lids of the 3" and 4" backwater valves to serve as an extention handle for easier access to the plug.

Backwater Valves

These simple devices offer effective protection against the backflow of sewage and stormwater into homes and businesses.





Under Normal Operation, the lightweight flapper opens and allows waste water to exit to sewer line.

During a backflow, the flapper seals closed, stopping the flow from reaching interior drains entering the living space.

Note: If the valve is to be buried in the ground or installed under a concrete floor, an access sleeve with lid is to be installed over the opening in the top of the valve permitting access to the valve for periodic inspection. If the sleeve is solvent cemented to the valve, care must be taken to ensure that the operation of the access plug is not affected.
