LASCO®
Fittings, Inc.

October 21, 2019

To Whom It May Concern:

All LASCO Branded Sch 40, Sch 80, CPVC Sch 80, CPVC CTS, and DWV products are made in USA in Brownsville, TN. except white and grey unions and Ultra Fix Telescoping Repair Couplings.

There is no pre or post consumer recycled material in our fittings per ASTM. We re-use nearly 100% of our own clean rework material. But this is generally less than 5%. The wood used in our pallets meet the requirements for FSC certification. All of our wood pallets are made from regionally manufactured materials. All of our boxes used in packaging are made of 30% recycled materials and meet SFI sourcing requirements.

The products that we produce at LASCO are vital to sustainable green building systems. Our products are used in rainwater harvesting, water filtration systems, grey water systems, water treatment, radon venting, etc… These systems, using LASCO Fittings, not only conserve resources but can also help building projects achieve points in many green building systems.

Regards,

Tom Batten
