INTRODUCTION

This catalog lists the most popular CADWELD connections using solid or concentric stranded copper conductor, insulated or bare. For a more complete listing, refer to catalog A1A.

If you cannot find the connection you need, contact ERICO or your local distributor or agent. We have designed over 45,000 connections, and "specials" are designed every day.

1. What connection do you want?

We strongly recommend that wherever possible you use molds listed in this catalog or in catalog A1A.

2. Only the most popular CADWELD connections are listed in this catalog.

For CADWELD EXOLON connections and ordering information, see catalog A1A.

3. What are the conductor sizes?

This catalog covers connections between solid or concentric stranded copper conductors to each other, to lugs, and to ground rods. For sizes not listed, contact your local CADWELD distributor, agent or ERICO.

Note: Other publications describe connections to conductors of copper clad, high-voltage copper, aluminum, busbar, lightning protection cable, steel cable, etc.

4. You must have the following to make a weld:

- Mold to fit your conductors
- Weld metal required by your mold
- Handle clamps or frame
- Flint ignitor (included with handle clamps and frames)
- If using CADWELD EXOLON, you need a Relia-Start™ battery instead of a flint ignitor.
- Lugs, sleeves, packing material listed on the page with the mold.

Ph: 1-800-677-9089 www.erico.com

GROUNDING CONNECTION SPECIFICATION

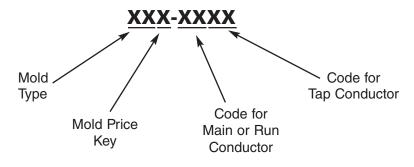

All grounding connections of copper to copper and copper to steel conductors of #8 and larger sized conductors shall be CADWELD exothermic welded connections. Conductors spliced with a CADWELD exothermic welded connection shall be considered as a continuous conductor, as stated in the notes accompanying NEC 250-50, 250-64, 250-68, 250-70 and IEEE Std 80 – 1986.

All grounding connections to equipment shall use bolted lugs. When the conductor is #8 and larger, the lug shall be joined to the conductor by the CADWELD process, otherwise use listed compression lugs which meet IEEE Std 837 – 1989.

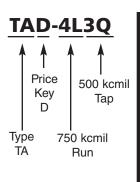

THE CADWELD MOLD NUMBERING SYSTEM

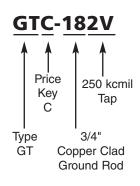

The CADWELD Mold Part Number gives, in code, the complete information of the mold.

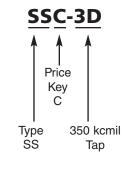

- Type of connection, mold price key, and conductor size(s)

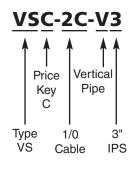

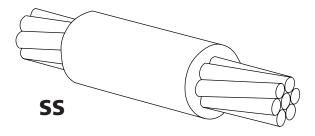

EXAMPLES

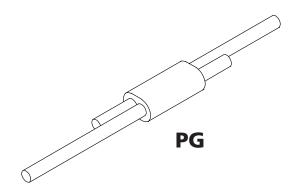

HORIZONTAL SPLICE

- · Splice of horizontal cables.
- Type PG makes a parallel style connection.
- Concentric stranded copper cable unless otherwise noted.
- Solid conductor may be either copper or Copperweld®.
- Also available are splices of different and mixed cable sizes. For Copperweld DSA cables, contact ERICO.
- Bold letter in mold part number is the price key.

REQUIRED TOOLS

XBQ/XBZ MOLDS

The CADWELD XB molds are the quickest, most efficient way to make lapped, horizontal x-style connections on solid or concentric stranded cable for a variety of installations.

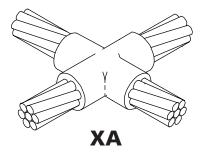

For cable-to-cable X-style connections at power substations and other commercial and industrial sites, there's never been a faster or easier way to make a reliable CADWELD connection. This two-piece mold lets you make connections in a trench in about half the time it would take with compression connectors or other exothermic products — and at a fraction of the cost.

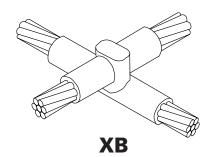

- Ergonomic two-piece molds use standard L160 and L159 handle clamps...the same clamps you use with other CADWELD molds.
- Saves labor costs. X-style connection can be made by one person in about 1 minute. That's 40 to 70% faster than other methods.
- Costs less. Saves you 1/3 over other models, thanks to innovative design techniques and advanced manufacturing technology.
- Simple to use. Operates just like an XA-style mold, but there's no need to cut the cable!
- Easy cable alignment.
- Also available in "smokeless" EXOLON.

NOTES

- Molds not available with wear plates.
- Special cleaning tool supplied with each mold.
- All Q price molds require L160 handle clamp.
- All Z price molds require L159 handle clamp.

HORIZONTAL X CONNECTIONS

- XA Cross of horizontal cables, tap cable cut cables in same plane.
- XB Cross of horizontal cables, lapped and not cut.
- Concentric stranded copper cable unless otherwise noted.
- Solid conductor may be either copper or Copperweld®.
- Bold letter in mold part number is the price key.

FIELD INFORMATION GUIDE

A. PROBLEM: MOLD DOESN'T CLOSE TIGHTLY Check For:

- 1. Adjustment of handle clamps.
- 2. Out-of-round or bent cables.
- 3. Dirt or slag in mold parting line.

NOTE: Use "C" clamp if necessary.

B. PROBLEM: CONNECTION COVERED WITH EXCESSIVE SLAG

Check For:

- 1. Weld material leaking past the disk caused by:
 - (a) Chipped graphite at tap hole.
 - (b) Disk moved when weld material was dumped.
 - (c) Disk not properly seated.
 - (d) Forgot disk.

NOTE: A small amount of slag on the surface is . . not abnormal.

C. PROBLEM: POROUS CONNECTION

Check For:

- Moisture present either in conductor or mold.
 Remedy:
 - (a) Dry the conductor under wet conditions.
 - (b) Heat mold with torch (to above 212ыF) or by igniting weld metal in mold without any conductors, taking care to prevent burns from the hot metal running out of the mold. Do not use the second method of heating if the mold has wear plates.
- **2.** Other contaminants (oil, insulation, etc.) present in conductors.

Remedy:

- (a) Wash conductor with a suitable solvent.
- (b) Remove insulation if present between strands.
- CADWELD Mold Sealer in weld cavity of mold.

Remedy:

(a) Always apply CADWELD Mold Sealer material to conductor after mold is closed.

D. PROBLEM: CONDUCTORS DO NOT WELD Check For:

1. Conductors were not properly cleaned and dry. **Remedy:**

- (a) Remove oxides with wire brush (T313 or T314). If heavily oxidized, have fresh-cut conductor end and use CADWELD Heavy Duty Molds.
- (b) Dry conductors with torch.
- Conductors not properly positioned in the mold.

Remedv:

- (a) Check for proper gap or butting as required (see mold tag and positioning instructions packaged with mold).
- (b) Check to be sure gap is centered under tap hole.

E. PROBLEM: WELD METAL LEAKS AROUND CONDUCTOR

Remedy:

- **1.** Use CADWELD Mold Sealer material around mold opening after mold is closed.
- 2. Use molds with wear plates (which also act as chill plates).
- **3.** Check for proper mold. Mold must be sized for the cable being welded.
- If mold is excessively worn, replace with new mold.

F. PROBLEM: CONNECTION HAS "FINS" - LOSING METAL

Check For:

- 1. Mold not completely closed.
- 2. Mold worn beyond useful life and needs replacement.

Ph: 1-800-677-9089 www.erico.com

FIELD INFORMATION GUIDE

G. PROBLEM: CABLES PULL OUT OF MOLD DURING WELDING

Remedy:

- Use clamp (CADWELD B-265) or other means to relieve tension on conductors when welding.
- H. PROBLEM: INSUFFICIENT FILL METAL TO COVER CONDUCTORS

Check For:

- 1. Use of proper weld metal size (see mold tag).
- 2. Too large a gap between conductors (see positioning instructions).
- 3. Mold leakage.
- 4. Conductors moved during welding process.

Remedy:

- (a) See Remedy E.
- (b) See Remedy F.
- (c) See Remedy G.
- I. PROBLEM: RISER TOO HIGH

Check For:

- 1. Use of proper weld metal size (see mold tag).
- 2. Moisture in mold or conductor.

Remedy:

- (a) See Remedy C.
- J. PROBLEM: SHORT MOLD LIFE (OVERALL AVERAGE SHOULD BE 50)

Remedy:

- Hard-drawn copper or DSA Copperweld requires the use of CADWELD B-265 cable clamp.
- Mold should be cleaned with T-394 or other soft brush, cloth or newspaper. DO NOT USE WIRE BRUSH.
- Care should be used in removing mold from finished connection to prevent chipping of the mold.

K. PROBLEM: WHEN WELDING TO STEEL, WELD DOES NOT "STICK" TO THE STEEL

Remedv:

- Steel must be cleaned with rasp or grinder to bright metal. All mill scale, paint and/or other coating must be removed. Wire brushing will NOT suffice. Grease must be removed with a solvent before cleaning. When grinding, use a vitrified wheel only.
- 2. Galvanized surfaces normally require cleaning with only a wire brush or emery cloth. However, extra-heavy galvanized steel must be cleaned with a rasp (T321).
- 3. If steel is moist, heat with a torch (from the back side if possible). Any carbon deposit from the flame must be removed.
- Conductors not in proper position. Check instruction sheet.
- L. PROBLEM: MOLTEN METAL "SPITS" OUT OF CRUCIBLE WHEN MAKING CONNECTION

Remedy:

1. See Remedy C.

SAFETY FIRST

ERICO recommends SAFETY FIRST when making CADWELD Connections. We offer safety equipment, including gloves and glasses as shown.

Safety Glasses

These glasses may be worn separately or over prescription glasses.

Gloves

Heavy canvas gloves with leather palms.

CADWELD WELD METAL

CADWELD Weld Metal is a mixture of copper oxide and aluminum, packaged by size in plastic tubes. Each tube contains the starting material at the bottom of the plastic tube, with the Weld Metal on top. These materials are not explosive and not subject to spontaneous ignition. These containers are packaged in boxes along with metal disks. Each weld uses one disk. Disks are included with the weld metal.

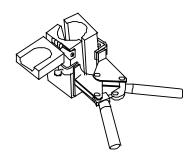

Five types of CADWELD Weld Metal are used for grounding connections:

- 1. F20 or standard Weld Metal is used for all grounding connections with the exception of those to cast iron or to load bearing rail. The Standard Weld Metal containers have clear (or natural) caps.
- 2. XL Weld Metal is used with EXOLON molds. EXOLON Weld Metal containers have white caps.
- **3.** XF-19 Alloy Weld Metal is used for all connections to cast iron such as Type HB and others. XF-19 Weld Metal containers have orange caps.

For DUCTILE IRON, see Section 3 in Catalog A1A, Cast Iron Connections.

- **4.** CADWELD F80 Alloy Weld Metal is used for all connections to load bearing rail such as Type W Bonds. F80 Weld Metal containers have yellow caps.
- **5.** Cathodic connections require different weld metal and molds. Contact ERICO for cathodic connection applications.

CADWELD MOLDS

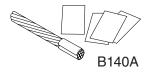

A semi-permanent graphite mold is used for making most CADWELD Connections. The mold controls the direction and speed of the molten CADWELD weld metal flow and its final shape. The graphite used in a CADWELD mold is a high temperature type that lasts for an average of 50 or more CADWELD connections under normal usage.

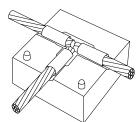

ADAPTING MOLDS TO FIT CONDUCTORS

Cables smaller than indicated on mold tag can be welded by using either wrap sleeves or adapter sleeves.

CADWELD Wrap Sleeve B140A

CADWELD Wrap Sleeve is wrapped around the cable until the diameter is about the same as the cable opening in the mold.

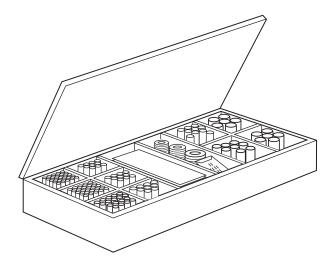

CADWELD Adapter Sleeves

CADWELD Adapter Sleeves are used to adapt a limited range of smaller size cables to a larger size CADWELD Mold.

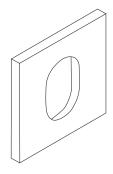

CABLE SIZE			
Concentric		Adapter Sleeve	Use in
Strand	Solid	Part No.	Mold for Stranded
#12,14	#10,12,14	B133-1H	#6
#7,8,10	#6,8	B133-1L	#4
#6	#5	B112	#2
#4,5	#3,4	B133-1V	#2
#3,4	#2	B133-1Y	#1
#2	#1	B133-2C	1/0
#1	1/0	B133-2G	2/0
1/0,1	2/0	B133-2L	3/0
2/0,1/0	3/0	B133-2Q	4/0

CADWELD Sleeve Kit (T427)

T427 Includes:	
Part No.	Quantity
B1331H	25
B1331L	25
B112	18
B1331V	10
B1331Y	10
B1332C	9
B1332G	10
B1332L	8
B1332Q	12
B140A	10
B117A	20
B117B	10
B117C	10
T320A	10

ADAPTING MOLDS TO FIT CONDUCTORS (cont.)

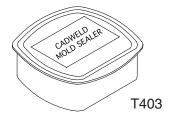

Packing

Packing consists of either preformed ceramic packing or sometimes B140A or B141A copper wrap shim. Packing is required on all rebar connections.

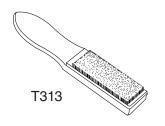

CADWELD Mold Sealer

T403 CADWELD Mold Sealer is ideal for sealing hot or cold molds to retard leakage from large stranded conductors. It is required on certain molds such as Types HA, HB, HC, VG and VN. It prolongs useful mold life when the cable opening becomes worn.

It is available in a convenient 2 pound package.

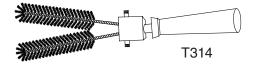

CABLE AND WORK SURFACE PREPARATION

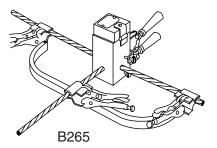

Cable Cleaning Brushes

Two types of brushes are available to aid in removing oxides from copper surfaces.

T313 Card Cloth Brush with short stiff bristles is generally preferred for cleaning concentric conductors and busbars, which are not heavily oxidized.

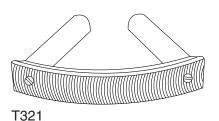

T314 Cable Cleaning Brush cleans any conductor and is especially useful for coarse or very dirty conductors. The brushes can be rotated to provide new cleaning bristles and are replaceable.

Cable Clamp B265

The B265 Cable clamp should be used with hard drawn copper cable, Copperweld DSA® conductor or any cable under tension.

Use of the clamp aids in preventing cable movement and prolongs mold life.

Rasp

T321 rasp is used to remove rust from any steel surface or galvanizing from hot dipped galvanized steel to expose the bare steel for welding. The curved blade makes it an efficient tool for flat surfaces.

T321A replacement blades are also available.

Ph: 1-800-677-9089 www.erico.com

CABLE AND WORK SURFACE PREPARATION (cont.)

Surefire™ Torch Head

T111 self igniting propane torch head. Squeeze the control knob for an instant flame. Release the control knob and the flame extinguishes. No flame adjusting. The burn tip remains cool during normal use. Operates on its side or upside down. Can withstand 60MPH winds without flareout.

Fits all standard 14 and 16 oz. propane cylinders.

SUREFIRE™ is a trademark of IPI

Galvanizing Touch-Up

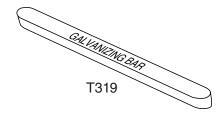

Easy to use galvanizing paint in a spray can is used to touch up heat affected areas on galvanized steel surfaces after welding. The damage to the galvanizing is often minimal so the repair is often cosmetic. T372A galvanizing compound is available in 12 ounce aerosol can.

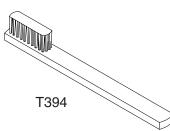

T358 Regalv is a 97% zinc rich organic coating which also can be used to repair galvanized surfaces. The brush is attached to the cap.

T358

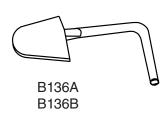

T319 Galvanizing Bar is used to repair a galvanized surface that has been damaged by welding or drilling. This is a low temperature, self-fluxing material. Often there is sufficient heat after making the CADWELD Connection to melt the bar or a small torch may be used.

MOLD CARE AND USE

Mold Cleaning Brush

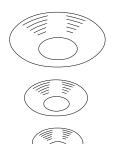

Mold cleaning brush T394 should be used to remove slag from molds – especially vertical split molds.

Slag Removal Spades

Slag Removal Spades are useful for removing the slag after making a CADWELD Connection – especially useful with horizontally split molds.

Slag Spade	Use With	Using
Part No.	Price Key Mold	Weld Metal Size
B136-A	A,C, & R	#65 & Smaller
B136-B	C,D,F & R	#90 & Larger

Disks

Each time a weld is made, a new disk is required. The disk sits on the bottom of the crucible. Its purpose is to hold the powdered weld metal until the reaction takes place. The slag produced by the reaction rises to the surface and the molten copper settles to the bottom of the crucible where it melts the disk and flows over the conductors to produce a permanent molecular bond.

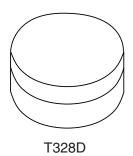

Disks are available in three sizes:

B117A used in molds using #15 thru #32 weld metal (3/4" diameter).

B117B used in molds using #45 thru #115 weld metal (1" diameter).

B117C used in molds using #150 thru #500 weld metal (1-1/2" diameter).

Disks are included with the Weld Metal.

Disk Kit

A disk container (T328) which includes 20 of each of the three sizes of steel disks is available for your convenience. Kit Part No. T328D.

MOLD CARE AND USE (cont.)

Wear Plates

Wear plates reduce mechanical abrasion of molds at cable entry points and help prevent leakage of molten metal (particularly on larger 7 strand conductor). These features prolong mold life.

Most CADWELD Molds are available with factory-mounted wear plates for the following sizes:

Copper Cable: 1/0 AWG thru 500 Kcmil DSA Copperweld: 7/#10 thru 19/#6

Ground Rods: 1/2" thru 1"

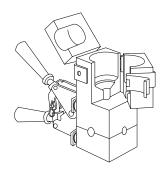

To order WEAR PLATES, specify: Mold Part No. followed by the suffix "-W" i.e., TAC-2Q2Q-W.

Not available with types HA, HB, HC, LJ, certain PTs & PCs, RR, VB, VF, VG, VN, XA, XBQ or XBZ.

Following are the number of wear plates (W.P.) used on the various mold types listed in this catalog.

TYPE	W.P.	TYPE	W.P.	TYPE	W.P.
GB GB-GR	1 2	HT LA	2	RC RD	2 2
GB-GT GL	3 1	LE LL	2 1*	SS TA	2 3
GR GT	2	PC PT	3** 4**	VS VT	1 2
GY HS	3 1	RA RB	1 2	VV XB	1 4

^{*} Available only on molds for 2" and narrower bus size.

Split Crucible Molds

Molds made with a horizontal opening and solid crucible section may be specified as a SPLIT CRUCIBLE TYPE. The advantage of the SPLIT CRUCIBLE MOLD is easier cleaning, but lead times are longer.

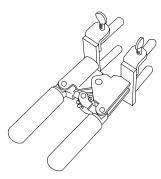

To order a SPLIT CRUCIBLE TYPE specify: Mold Part No. followed by the suffix "L" i.e., TAC2Q2QL.

Available in Type TA, XA, XB (C & D mold price only), LE and LJ connections.

^{**} Available only on mold for 1/0 (or 7/#10) and larger run and tap.

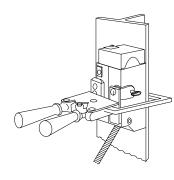

MOLD FASTENING AND MOUNTING

CADWELD Handle Clamps

Handle clamps such as the one shown are required for most molds. Specialized frames with handles are used on some molds. Flint ignitors are included with all handle clamps. The following handle clamps are most widely used.

- 1. L160 for all molds having a "C", "E", "Q" or "R" mold price listing. (3" wide molds)
- 2. L159 for all molds having a "D", "F", "J" or "Z" mold price listing (4" wide molds)

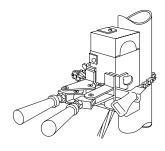

Vertical Surface Mold Support

The CADWELD Mold can be securely held to a vertical "H" column or angle by using the Vertical Surface Mold Support. It is easily attached to an existing L159 or L160 Handle Clamp. For use with Types VB, VG, VN, and VS molds, fits steel up to 1" thick, for Type VF mold, 3/4" thick.

B134: For use with L160 E-Z CHANGE Handle Clamp B135: For use with L159 E-Z CHANGE Handle Clamp

Chain Support Handle Clamps

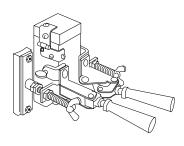

The CADWELD mold can be securely held to a pipe using the clamp assembly consisting of a modified L159 or L160 Handle Clamp with built-in Pipe Attachment.

Clamp	Fits	For Following	Pipe
Part No.	Mold Price	Connection Types	
B159V	D & F	VS,VF,VB, & VV	Vertical
B160V	C & R	VS,VF,VB, & VV	Vertical
B159VT	D & F	VT	Vertical
B160VT	C & R	VT	Vertical
B159H	D & F	HA,HS,HC, & HT	Horizontal
B160H	C & R	HA,HS,HC, & HT	Horizontal

The above clamps are equipped with 20" length of chain which will fit up to 4" pipes. Extra 20" length of chain, B158, is available to fit up to 10" pipes.

MOLD FASTENING AND MOUNTING (cont.)

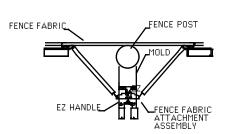

Magnetic Handle Clamps

The CADWELD mold can be securely held to a large flat or slightly curved vertical surface using the Handle Clamp with Magnetic Support. Used on vertically split molds.

Clamp	Fits Mold	Minimum Width
Part No.	Price Key	Required*
B396	C & R Price Key	8"
B159M	D & F Price Key	10-1/2"
B399AM	T Price Key	6"
B399BM	P & N Price Key	7"

^{*}Width will vary slightly depending upon the type of connection being made.

Fence Fabric Attachment Assembly

An easy to use, labor saving, Fence Fabric Attachment Assembly fastens to your existing L159 or L160 Handle Clamp to firmly hold your mold to the fence post after the fence fabric has been attached. Ideal for retrofit jobs.

Part No.	Fits Handles
B827A	L160, L159

GROUND ROD SPECIALTY TOOLS

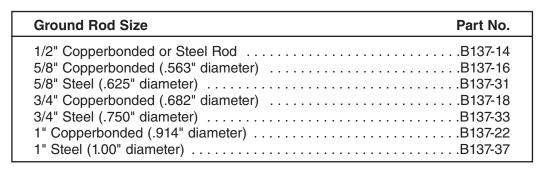

ERITECH® Ground Rod Drivers

Product No.	Description
EGRD58	5' driver body with insert for up to 5/8" ground rods
EGRD58I*	Replacement insert for 5/8" ground rods
EGRD34	5' driver body with insert for up to 3/4" ground rods
EGRD34I*	Replacement insert for 3/4" ground rods

^{*}Both 5/8" and 3/4" inserts fit standard body of EGRD58 or EGRD34.

Ground Rod Driving Sleeves**

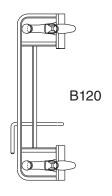

Use a CADWELD ground rod driving sleeve to prevent mushrooming the top of the ground rod.

^{**} For plain (unthreaded) ground rods only.

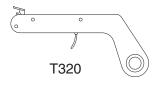

GROUND ROD SPECIALTY TOOLS (cont.)

Ground Rod Splice Clamp

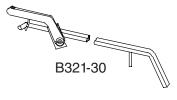

The B120 Ground Rod Splice Clamp must be used to support the upper rod and provide a method of correctly positioning the rods and mold while splicing the rods. (Type HDGB Connection).

ACCESSORY TOOLS

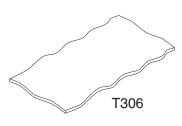

Flint Ignitors

T320 CADWELD flint ignitors are used to ignite the starting material when making a CADWELD Connection. An ignitor is included with each handle clamp or frame. T320A Replacement Flints are also available.

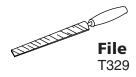

Flint Ignitor Extension

B321-30 Flint Ignitor Extension attaches to the T320 Flint Ignitor and allows the installer to be about 30" from the mold. Ideal for such applications as making a mold in a narrow trench while the installer is at ground level.

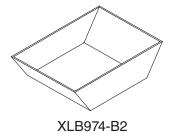

Ceramic Blanket

The woven Ceramic Blanket (Part T306) can be used to hold a hot mold or keep the work surface free of slag when cleaning the mold.

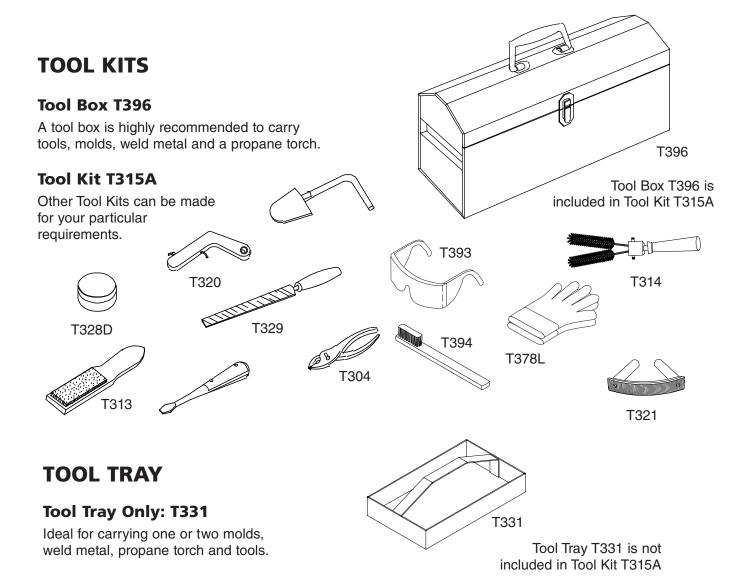

Welding Tray

The Welding Tray (Part XLB974-B2) can contain a spill of molten weld metal. It is for personnel safety. Recommended when working overhead or over expensive equipment.
