Product Information and Specification Guide

Metal Halide Lamps

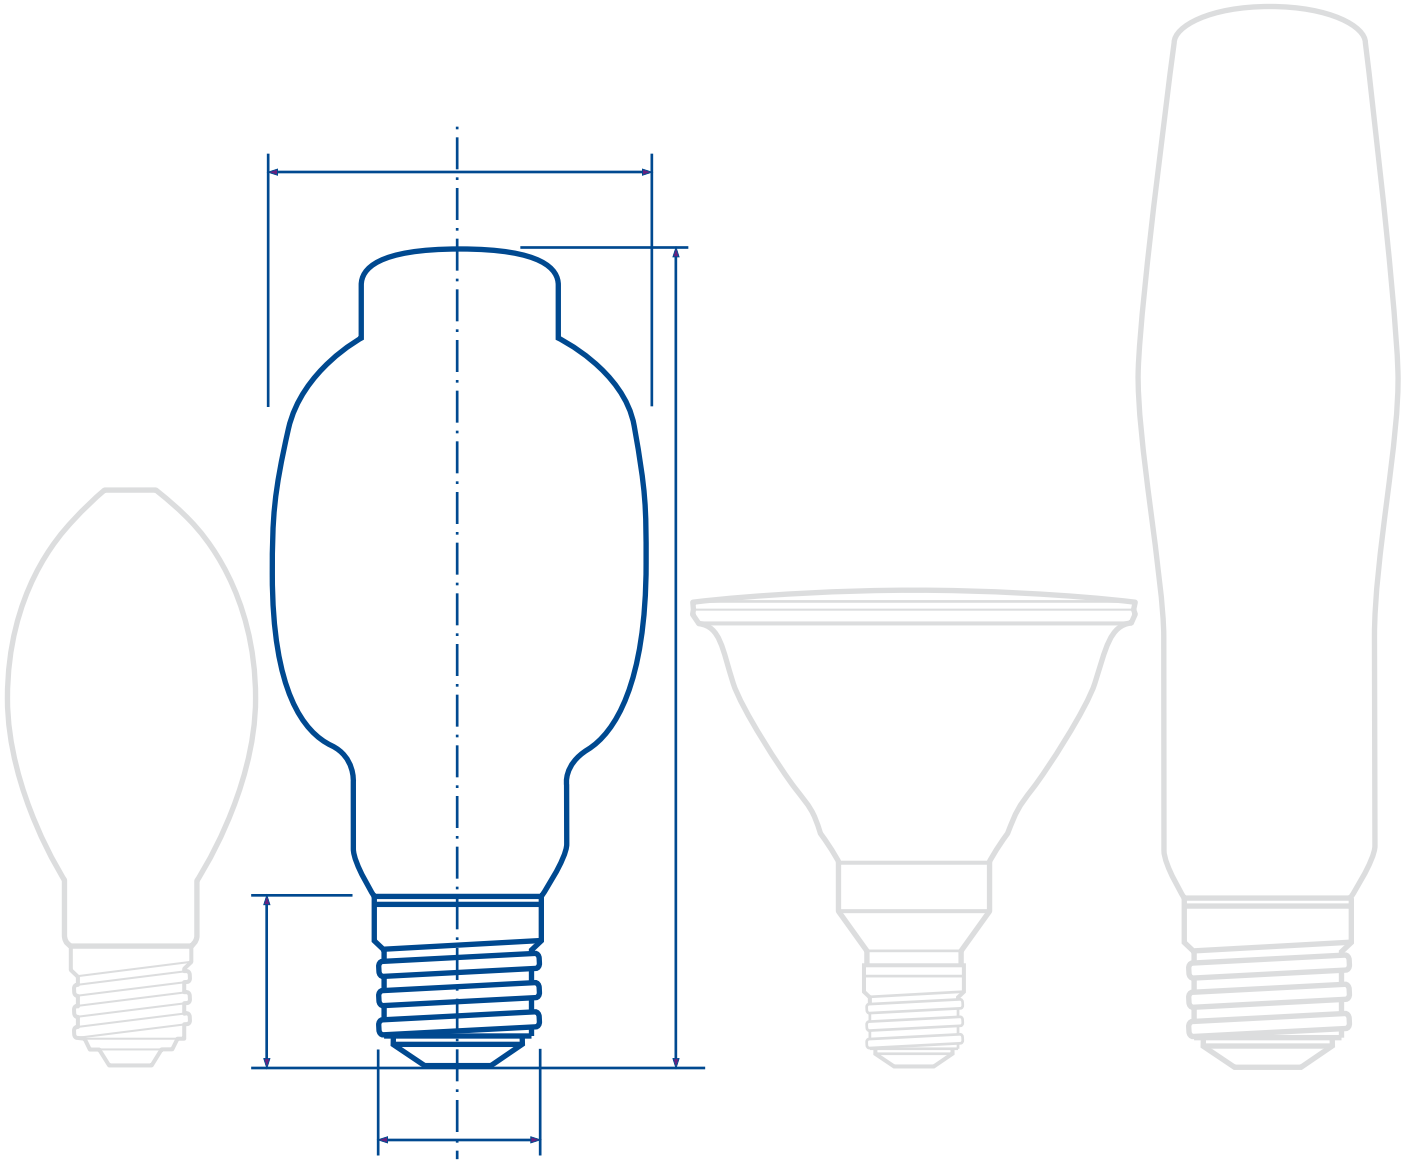

Table of Contents

SYLVANIA Metal Halide Lamps

Specification Guide
This guide contains a complete listing of SYLVANIA metal halide products available at its time of printing. The guide contains technical data (photometric, electrical, and physical characteristics) and is a supplement to the product information bulletins. Consult the online catalog at **www.mySYLVANIA.com/register** for the most up-to-date information as ratings are subject to change without notice.

OSRAM SYLVANIA offers additional literature describing each product family, which is updated as new products become available.

Consult product catalog, online catalog, or printed packaging for warning label for Metal Halide lamps.

Lumen Rating
SYLVANIA Metal Halide lamps, with the exception of HQI® lamps, are specified at rated wattage. What does this mean? The light output values contained in this specification guide are based on actual lamp operation on an ANSI circuit (high power factor linear reactor) while operated at rated wattage. Mean Lumens are measured on ANSI reference circuits at rated wattage at 40% of average rated life. Commercially available magnetic CWA and Lag ballasts may operate lamps below rated wattage depending on power factor of the system. This reduction in wattage may decrease luminous output.

HQI lamps are specified at rated input to the reference circuit. Photometric and electrical results will vary on commercial ballasts.

Ratings are based on burning cycles of at least 10 hours per start (excluding M1500 and BRITELINE lamps) on ballasts which meet ANSI standards. Initial lumens are based on 100 hours of operation. Any reduction in the rated operational hours per start will adversely affect light output and lamp life.

Life Rating
The average life of a lamp is based on vertical operation (unless otherwise noted) of representative lamps operated under controlled conditions of at least 10 hours per start (except for M1500 and BRITELINE lamps, which are based on 5 hours per start). Average life is defined as the total operating hours at which 50% (Median) of a group of lamps of significant size is still operating.

Operating cycles shorter than 10 hours per start will reduce lamp life as follows:

5 hours/start – Approximately 75% of Rating

2.5 hours/start – Approximately 55% of Rating

1.25 hours/start – Approximately 40% of Rating

Typical survival curves have been provided for most lamps contained herein. The curves illustrate the definition of average rated life and the percentage of expected lamp failures.

Maximum Base Temperature
A welded mogul screw base allows higher maximum operating base temperature than designated by ANSI (except for EX39 bases). For specific temperature requirements, see product section.

Light Center Length
The light center length of HID lamps is usually measured from the center of the arc tube to the bottom of the lamp base.

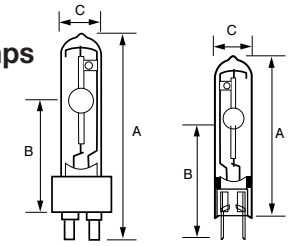
Light Center Length measurements for ceramic T6/G12 & TC are slightly different as shown in the pictures below.

Maximum Overall Length
The maximum overall length of single-ended lamps is the maximum distance from the top of the bulb to the bottom of the base. For double-ended lamps, it is the maximum distance from end-to-end excluding any leadwires.

Arc Length
Arc length is the dimension of the arc discharge measured from one electrode tip to the other. (METALARC® POWERBALL® Ceramic lamps are designed with a semi-opaque arc tube, thus arc length should be used as a reference only).

T6/T7.5 (G12) and TC Lamps

A = Maximum Overall Length
B = Light Center Length
C = Diameter



T6/T7.5 (G12) **TC**

Key to Date of Manufacture
The existing date code system is comprised of 4 characters. The second character represents the year, i.e. 6 = 2006 and the third character represents the month, i.e. 1 = January 9 = September, a = October.

METALARC® Performance Means Best Performance
SYLVANIA Metal Halide lamps are the ideal choice for today's energy-conscious lighting world. High output, high efficacy, and a wide range of wattages and colors allow designers increased flexibility to optimize their lighting solution while holding costs down. METALARC lamps have significantly higher efficacy than mercury vapor or incandescent products and have considerably better CRI than mercury vapor and high pressure sodium lamps.

OSRAM SYLVANIA offers a complete line of Metal Halide lamps in a variety of families. Each family of products offers a variety of open or enclosed fixture rated lamps, as defined by new ANSI nomenclature for fixture ratings: O/E/S/F.

O = Lamps classified as O-type, comply with ANSI Standard C78.389 for containment testing and may be used in open luminaires.

E = Lamps classified as E-type are to be used ONLY in suitably rated enclosed luminaires.

S = When operated within 15 degrees of vertical, this lamp may be operated in an open luminaire provided the installation is not near people or flammable or combustible material, otherwise it must be operated in a suitably enclosed luminaire.

F = F-rated lamps require an enclosed fixture with a UV filter and lens interlock.

METALARC PRO-TECH® (MP)
For lamps that will operate safely in either open or enclosed fixtures just look for the "MP" designation – METALARC PRO-TECH. These are specially designed lamps that incorporate a protective shroud to contain an arc tube rupture. METALARC PRO-TECH lamps can be used in open or enclosed fixtures. Dedicated bases are supplied on both low and high wattage lamp types while the PRO-TECH lamps are designed specifically for use with exclusionary sockets in open fixtures, they are also compatible with standard sockets. Lamps are available from 50W to 1000W in both the clear and coated versions.

Standard Probe Start Metal Halide Lamps

Standard METALARC Lamps (M)
A wide range of general lighting lamps includes wattages from 175W to 1500W. They offer exceptional white light in either a clear or coated outer bulb. Standard METALARC lamps allow for design flexibility with multiple light source solutions to choose from.

SUPER METALARC Lamps (MS)
SUPER METALARC lamps are position dedicated, which means that they are specially designed to run in specific operating positions. This feature allows these lamps to exhibit improved performance over standard (universal operating) metal halide lamps of similar wattage. Product features include longer life, higher maintained lumens and increased efficacy. For applications where higher light output or specific operating positions are required, Super METALARC lamps are available in 175, 250, 400, and 1000 watt.

METALARC SUPERSAVER® (M/SS)
Constructed with an enhanced arc tube for peak performance, METALARC SUPERSAVER lamps are designed as energy saving replacements for standard lamps. The 950 watt SUPERSAVER lamp is a direct retrofit
for existing 1000 watt products. The 360 watt SUPERSAVER replaces 400 watt products and the 150 watt SUPERSAVER replaces 175 watt lamps—no ballast change is required.

METALARC PULSE START (M/PS)
METALARC PULSE START lamps utilize metal halide performance with proven ignitor technology for longer life, improved lumen maintenance and reduced color shift over lamp life compared to standard metal halide products. Lamp configurations include low and high wattage types, both clear and coated. METALARC PRO-TECH lamps less than 150 watts and POWERBALL Ceramic lamps also utilize PULSE START technology.

All PULSE START lamps require the use of a 4000V pulse rated socket.

METALARC POWERBALL® Ceramic (MC or MCP)
METALARC POWERBALL Ceramic lamps meet today's color critical needs by combining conventional metal halide pulse start characteristics, such as high efficacy and long life, with improved lamp-to-lamp color consistency and high CRI (>85). Their compact size allows for use in a wide variety of applications.

METALARC POWERBALL lamps use a patented rounded arc tube shape, which allows for a more uniform temperature and improved color consistency. A wide configuration of clear and coated lamps are available, from 20W-150W in TC, T6, T7.5, PAR20, PAR30LN, PAR38, and E17 bulb shapes (available in PRO-TECH). In addition, higher wattage lamps such as the 250W and 320W POWERBALL Ceramic are available.

Specialty Metal Halide Lamps

METALARC SAFELINE® (MT)
The SAFELINE is available in 400 watts. This lamp is specially designed to self-extinguish within 15 minutes when the outer bulb is broken. This lamp is recommended for use in sports facilities and other places of public assembly where the lamps may be subject to breakage by external objects.

METALARC BRITELINE
OSRAM SYLVANIA offers the BRITELINE family of double ended lamps in 1500 and 2000 watts. These lamps allow for optimized fixture designs, which provide excellent optical control and high efficiency. The lamps are particularly well suited for sports lighting and outdoor floodlighting applications. All lamps are rated for type F luminaires and must be operated in enclosed fixtures with an interlocked ultraviolet (UV) filter glass lens to prevent serious skin burns and eye inflammation resulting from shortwave ultraviolet radiation.

HQI®
HQI lamps are recommended for installations where higher CRI values are critical, such as interior and display lighting. These lamps are offered in a wide variety of wattages including 70 and 150. They are available in both the double-ended and single-ended configuration, in a variety of color temperatures and have CRI values up to 93.

All HQI lamps must be operated in enclosed fixtures.

NOTES
For lamp wattages of 360W and greater, it is recommended that lampholders with nickel-plated copper alloy center contacts (with spring) should be used rather than electrical contacts made of stainless steel.

Max. Overall Length mm. (")	211 (8.31)		292 (11.5)	
Nominal Arc Length mm. (")	16.6 (0.65)	N/A	20.2 (0.795)	
Max. Bulb Temperature °C (°F)	400 (752)			
Max. Base Temperature °C (°F)	210 (410)			
Electrical Characteristics				
Nominal Lamp Watts	250 [1]		320	
Nominal Lamp Volts (RMS)	133		135	
Nominal Lamp Current (RMS)	2.3		2.6	
Minimum Start Volt-LAG	254 RMS, 345 Peak [2]			
Minimum Start Volt-Lead Peak	254 RMS, 483 Peak			
Voltage Crest Factor (VCF)	1.9			
Maximum Current Crest Factor	1.8			
Sustaining Minimum Voltage			270V	
Minimum Pulse Width at 2700V			1.3µs	
Photometric Characteristics				
Average Rated Life (Hours)	15000		20000	
Initial Lumens	24000	22500	37500	36000
Mean Lumens	19200	18000	28125	27000
Correlated Color Temperature °K	4200	4000	4000	3900
Color Rending Index (CRI)	94		88	
Warm Up Time (minutes)	2-4			
Hot Restrike Time (minutes)	5-7			
Nominal CIE Chromaticity Coordinates X	0.368	0.382	0.383	0.386
Y	0.355	0.367	0.379	0.381

(1) Wattage will be slightly lower on Magnetic Ballasts, see information in Lumen rating section.

(2) 345V peak allows for mag-reg ballast use, 359V peak for standard lag ballasts.

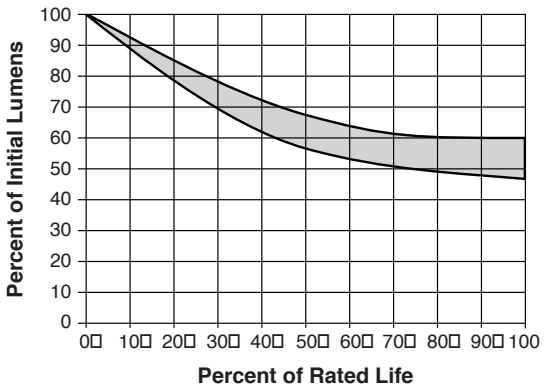
Lumen Maintenance Curves

The light output of METALARC® lamps gradually declines throughout lamp life. This phenomenon is also found in other electrical light sources, such as fluorescent & incandescent. Approximate lumen maintenance curves found below are typical ranges based upon the tolerances of luminaires, ballasts, and input voltage.

A wide variation of expected lumen maintenance is found throughout the product line due to chemistry differences, starting method differences, arc tube variations, and lamp life ratings. Actual lamp performance may vary.

Typical Lumen Maintenance Curve



Standard METALARC (except 1000W and 1500W)
SUPER METALARC
METALARC SUPERSAVER®
METALARC SAFELINE®
METALARC PRO-TECH®

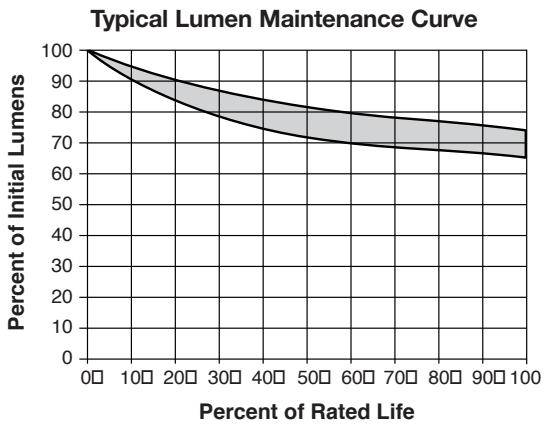
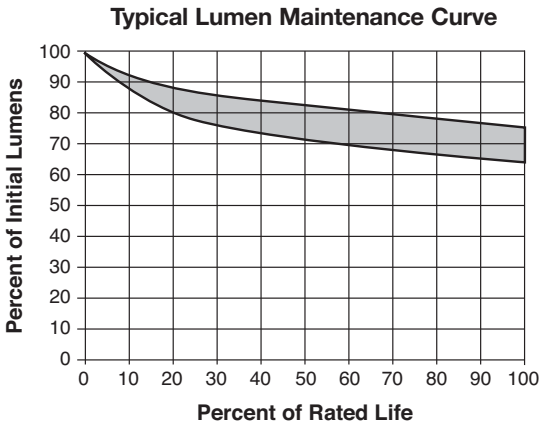
METALARC POWERBALL E17
and High Wattage Lamps

Lumen Maintenance Curves (continued)



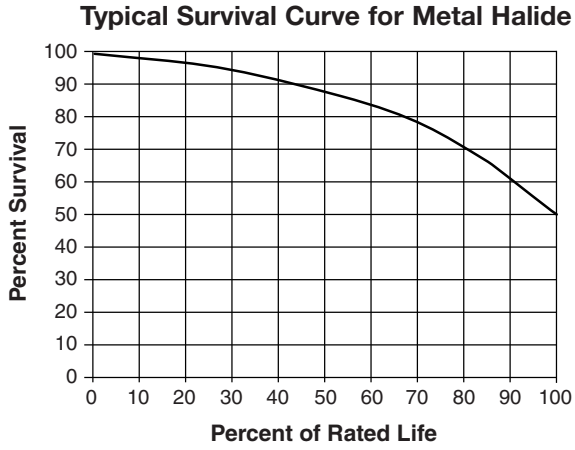
Standard METALARC® 1000W and 1500W



METALARC POWERBALL® T Lamps

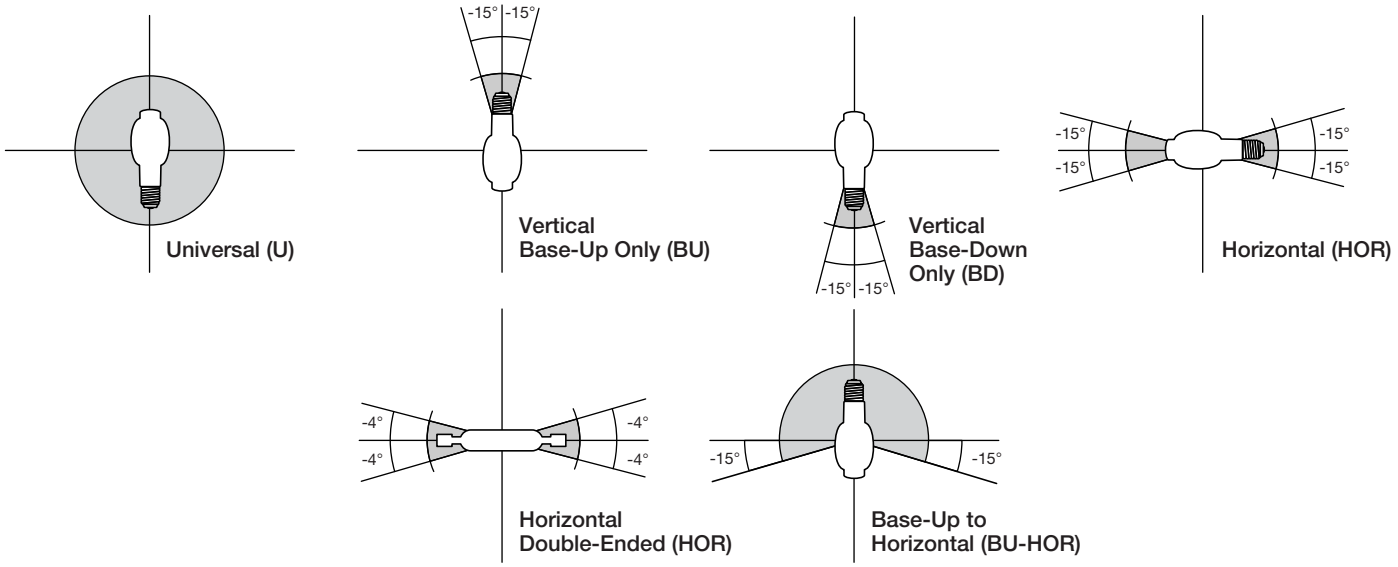
Typical Survival Curves

Typical survival curves are based on 10 hours per start with the exceptions of the M1500, and BRITELINE (which are based on 5 hours per start). The curve is nominal approximation; actual lamp performance may vary.



Operating Positions

METALARC® and SUPER METALARC® lamps have various operating position requirements. Each lamp type has these requirements as part of the lamp ordering information etched on the outer jacket of the lamp; for example, MP400/BU—base-up only.



Effect of Operating Position

The published ratings of universal METALARC lamps are established with the lamps operated in the vertical (base-up) position. In operating positions other than vertical, the arc tends to bend upward thereby producing non-uniform heating of the arc tube wall, resulting in less efficient operation. This may cause the lamp wattage and lumen output to decrease slightly, and may reduce the Lumen Maintenance. The operating positions which produce the lowest lumen output (and should therefore be avoided) are approximately 20–30° from horizontal (60–70° from vertical). The graph shows the effects of light output versus lamp operating position for METALARC lamps. These effects are more prevalent among higher wattage lamps (250W–1500W) and performance may vary by lamp type. This curve should be used as a guideline, and not a standard (see specific ratings for details).

WARNING: This lamp can cause serious skin burn and eye inflammation from shortwave Ultraviolet radiation if the outer envelope of the lamp is broken or punctured. Do not use where people will remain for more than a few minutes unless adequate shielding or other safety precautions are used. Lamps that will automatically extinguish when the outer envelope is broken or punctured are commercially available.
