

XD deflection couplings

Applications:

XD Couplings can be installed indoors, outdoors, buried underground or embedded in concrete in non-hazardous areas. XDs are used with standard rigid conduit or PVC rigid conduit. (PVC requires rigid metal conduit nipples and rigid metal-to-PVC conduit adapters). XDs provide a flexible and watertight connection for protection of conduit wiring systems from damage due to movement.

Typical applications include:

- Underground conduit feeder runs
- Runs between sections of concrete subject to relative movement
- Runs between fixed structures
- Conduit entrances in high rise buildings
- Bridges
- Marinas, docks, piers

Features:

- XD couplings accommodate the following movements without collapsing or fracturing the conduit, and damaging the wires it contains:
 1. Axial expansion or contraction up to $\frac{3}{4}$ "
 2. Angular misalignment of the axes of the coupled conduit runs in any direction to 30°
 3. Parallel misalignment of the axes of coupled conduit runs in any direction to $\frac{3}{4}$ "
- Inner sleeve provides a smooth insulated wireway for protection of wire insulation
- Watertight flexible neoprene outer jacket is corrosion-resistant and protects the grounding strap and the attachment points of the hubs
- Tinned copper flexible braid grounding straps assure grounding continuity
- Stainless steel jacket clamps for strength and corrosion resistance
- Standard tapered electrical threads fit standard rigid conduit
- Integral hub bushing protects insulation of conductors

Certifications and compliances:

- UL Standard 514B
- CSA 22.2 No. 18 3-12
- Wet locations

Size ranges:

- 1" to 6" (smaller sizes can be obtained by using reducing bushings)

Standard materials and finishes:

Hubs:

- Feraloy® iron alloy – hot dip galvanized

Outer jacket:

- Molded neoprene – natural (black)

Jacket clamps:

- Stainless steel – natural

Inner sleeve:

- Neoprene polyester fabric with steel coil

Bonding strap:

- Braided tinned copper

Hot dip galvanized now standard!

1. Axial expansion/contraction

2. Angular misalignment

3. Parallel misalignment
