

Volume 10: Enclosed Control

Powering Business Worldwide

Tab 1—Overview	V10-T1-1
Tab 2—NEMA Contactors and Starters	V10-T2-1
Tab 3—IEC Contactors and Starters	V10-T3-1
Tab 4—Lighting Contactors	V10-T4-1
Tab 5—Reduced Voltage Starters	V10-T5-1
Tab 6—Pump Panels	V10-T6-1
Tab 7—HVAC Control	V10-T7-1
Tab 8—NEMA Vacuum Break Contactors and Starters	V10-T8-1
Tab 9—Type 7/9 Hazardous Location Starters	V10-T9-1
Tab 10—Multi-Pak Group Control	V10-T10-1
Tab 11—Manual Motor Control	V10-T11-1
Tab 12—Special Applications	V10-T12-1
Tab 13—Alternate Enclosures	V10-T13-1
Tab 14—Enclosed Dimensions	V10-T14-1
Tab 15—Accessories and Modification Codes	V10-T15-1
Tab 16—Renewal Parts	V10-T16-1
Tab 17—Technical Data and Specifications	V10-T17-1
Appendix 1—Eaton Terms & Conditions	V10-A1-1
Appendix 2—Catalog Parent Number Index	V10-A2-1

Dimensions, Weights and Ratings

Dimensions, weights and ratings given in this catalog **are approximate and should not be used for construction purposes**. Drawings containing exact dimensions are available upon request. All listed product specifications and ratings are subject to change without notice. Photographs are representative of production units.

Terms and Conditions

All prices and discounts are subject to change without notice. When price changes occur, they are published in Eaton's *Price and Availability Digest* (PAD). All orders accepted by Eaton's Electrical Sector are subject to the general terms and conditions as set forth in Appendix 1—Eaton Terms & Conditions.

Technical and Descriptive Publications

This catalog contains brief technical data for proper selection of products. Further information is available in the form of technical information publications and illustrated brochures. If additional product information is required, contact your local Eaton Products Distributor, call **1-800-525-2000** or visit our website at **www.eaton.com**.

Compliance with Nuclear Regulation 10 CFR 21

Eaton products are sold as commercial grade products not intended for application in facilities or activities licensed by the United States Nuclear Regulatory Commission for atomic purposes, under 10 CFR 21. Further certification will be required for use of these products in a safety-related application in any nuclear facility licensed by the U.S. Nuclear Regulatory Commission.

WARNING

The installation and use of Eaton products should be in accordance with the provisions of the U.S. National Electrical Code® and/or other local codes or industry standards that are pertinent to the particular end use. Installation or use not in accordance with these codes and standards could be hazardous to personnel and/or equipment.

These catalog pages do not purport to cover all details or variations in equipment, nor to provide for every possible contingency to be met in connection with installation, operation or maintenance. Should further information be desired or should particular problems arise which are not covered sufficiently for the purchaser's purposes, the matter should be referred to the local Eaton Products Distributor or Sales Office. The contents of this catalog shall not become part of or modify any prior or existing agreement, commitment or relationship. The sales contract contains the entire obligation of Eaton's Electrical Sector. The warranty contained in the contract between the parties is the sole warranty of Eaton. Any statements contained herein do not create new warranties or modify the existing warranty.

Powering Business Worldwide

Eaton is a global leader in power distribution, power quality, control and automation, and monitoring products.

At Eaton, we believe a reliable, efficient and safe power system is the foundation of every successful enterprise. Through innovative technologies, cutting-edge products and our highly skilled services team, we empower businesses around the world to achieve a powerful advantage.

In addition, Eaton is committed to creating and maintaining powerful customer relationships built on a foundation of excellence. From the products we manufacture to our dedicated customer service and support, we know what's important to you.

Solutions

Eaton takes the complexity out of power systems management with a holistic and strategic approach, leveraging our industry-leading technology, solutions and services. We focus on the following three areas in all we do:

- Reliability—maintain the appropriate level of power continuity without disruption or unexpected downtime
- Efficiency—minimize energy usage, operating costs, equipment footprint and environmental impact
- Safety—identify and mitigate electrical hazards to protect what you value most

Using the Eaton Catalog Library

As we grow, it becomes increasingly difficult to include all products in one or two comprehensive catalogs. Knowing that each user has their specific needs, we have created a library of catalogs for our products that when complete, will contain 15 volumes. Since the volumes will continuously be a work in progress and updated, each volume will stand alone. Refer to our volume directory, MZ08100001E, for a quick glance of where to look for the products you need. The 15 volumes include:

- Volume 1—Residential and Light Commercial (CA08100002E)
- Volume 2—Commercial Distribution (CA08100003E)
- Volume 3—Power Distribution and Control Assemblies (CA08100004E)
- Volume 4—Circuit Protection (CA08100005E)
- Volume 5—Motor Control and Protection (CA08100006E)
- Volume 6—Solid-State Motor Control (CA08100007E)
- Volume 7—Logic Control, Operator Interface and Connectivity Solutions (CA08100008E)
- Volume 8—Sensing Solutions (CA08100010E)
- Volume 9—Original Equipment Manufacturer (CA08100011E)
- Volume 10—Enclosed Control (CA08100012E)
- Volume 11—Vehicle and Commercial Controls (CA08100013E)
- Volume 12—Aftermarket, Renewal Parts and Life Extension Solutions (CA08100014E)
- Volume 13—Counters, Timers and Tachometers (CA08100015E)—Available in electronic format only
- Volume 14—Fuses (CA08100016E)—Available in electronic format only
- Volume 15—Solar Inverters and Electrical Balance of System (CA08100018E)

These volumes are not all-inclusive of every product, but they are meant to be an overview of our product lines. For our full range of product solutions and additional product information, consult Eaton.com/electrical and other catalogs and product guides in our literature library. These references include:

- The Consulting Application Guide (CA08104001E)
- The Eaton Power Quality Product Guide (COR01FYA)

If you don't have the volume that contains the product or information that you are looking for, not to worry. You can access every volume of the catalog library at Eaton.com/electrical in the Literature Library.

By installing our Automatic Tab Updater (ATU), you can be sure you always have the most recent version of each volume and tab.

Icons

Green Leaf

Eaton Green Solutions are products, systems or solutions that represent Eaton benchmarks for environmental performance. The green leaf symbol is our promise that the solution has been reviewed and documented as offering exceptional, industry-leading environmental benefits to customers, consumers and our communities. Though all of Eaton's products and solutions are designed to meet or exceed applicable government standards related to protecting the environment, our products with the Green Leaf designation further provide "exceptional environmental benefit."

Learn Online

When you see the Learn Online icon, go to Eaton.com/electrical and search for the product or training page. There you will find 100-level training courses, podcasts, webcasts or games and puzzles to learn more.

Drawings Online

When you see the Drawings Online icon, go to Eaton.com/electrical and find the products page. There you will find a tab that includes helpful product drawings and illustrations.

Contact Us

If you need additional help, you can find contact information under the Customer Care heading of Eaton.com/electrical.

Welcome

Welcome to the latest edition of the Enclosed Control Catalog from Eaton's electrical sector. In this updated edition, you will find complete details on our extensive line of enclosed products.

Eaton Corporation

Eaton Corporation is a diversified industrial manufacturer ranked among the largest Fortune 500 companies. The electrical group is Eaton's largest division and is a global leader in electrical control, power distribution, power quality, automation and monitoring products and services. Eaton's electrical products include brands such as MGE Office Protection Systems™, Powerware®, Holec®, and MEM®. Eaton provides PowerChain® solutions to serve the needs of the industrial, institutional, IT, data center, mission critical, utility, residential and OEM markets worldwide.

Eaton Support and Service Center Capabilities

Enclosed Control Service Center Product Offering

- Type 1, 12, 3R, 4, 4X and 7/9 enclosures
- Non-combination starters
- Combination starters—non-fusible/fusible and circuit breaker
- Full voltage non-reversing, reversing and multi-speed
- Freedom™ (NEMA® Size 00–5), vacuum contactors, soft starters, lighting contactors, motor control centers and MCC aftermarket
- Modifications including cover control, CPTs, auxiliary contacts, heaters and more

Eaton Provides Enclosed Control Solutions That Are Unmatched In The Industry

- Local assembly and manufacturing capabilities
- Assembly and wiring of enclosed control and motor control centers
- Customized enclosed motor starting and lighting panels
- Modified pump panels
- Engineering support
- Custom AutoCAD® drawing capabilities
- Quick-ship capabilities
- Customer visits are welcome!

Six regional service centers

Technical Reference

Enclosure Types

Enclosures provide mechanical and electrical protection for operator and equipment. Brief descriptions of the various types of enclosures offered by Eaton are given below. See NEMA® Standards Publication No. 250 for more comprehensive descriptions, definitions and/or test criteria. All Eaton enclosures are NEMA ICS 6 compliant.

Enclosure Type Overview

**Type 1 (Conforms to IP40)—
for Indoor Use**

Suitable for most applications where unusual service conditions do not exist and where a measure of protection from accidental contact with enclosed equipment is required. Designed to meet tests for rod entry and rust resistance. Enclosure is sheet steel, treated to resist corrosion. Depending on the size, knockouts are provided on the top, bottom and sometimes on the side.

**Type 3R (Conforms to IP52)—
for Outdoor Use**

Primarily intended for applications where falling rain, sleet or external ice formations are present. Gasketed cover. Designed to meet tests for rain, rod entry, external icing and rust resistance. Enclosure is sheet steel, treated to resist corrosion. Depending on the size, a blank cover plate is attached to the top (for a conduit hub) and knockouts are provided on the bottom. Cover-mounted pilot device holes are provided and covered with hole plugs.

**Type 4X (Conforms to IP65)—
for Indoor or Outdoor Use**

Provides a measure of protection from splashing water, hose-directed water, wind blown dust, rain and corrosion. Constructed of stainless steel with gasketed cover. Designed to meet same tests as Type 4 except enclosure must pass a 200-hour salt spray corrosion resistance test. 304-grade stainless steel provided as standard. Select 316-grade option for improved corrosion resistance.

**Type 4 (Conforms to IP65)—
for Indoor or Outdoor Use**

Provides a measure of protection from splashing water, hose-directed water and wind blown dust or rain. Constructed of sheet steel with gasketed cover. Designed to meet tests for hose-down, external icing and corrosion protection. When conduit connections are specified, enclosure has two watertight hubs (power) installed top and bottom or one control hub installed in bottom—depending on size. Cover-mounted pilot device holes are provided and covered with hole plugs.

**Type 7/9—
for Hazardous Gas Locations**

For use in Class I, Group B, C or D; Class II, Groups E, F and Class III indoor locations as defined in the National Electrical Code®. Type 7/9 enclosures must withstand the pressure generated by the explosion of internally trapped gases and be able to contain the explosion so that gases in the surrounding atmosphere are not ignited. Under normal operation, the surface temperature of the enclosure must be below the point where it could ignite explosive gases present in the surrounding atmosphere. Designed to meet explosion, temperature and hydrostatic design tests.

**Type 12 (Conforms to IP62)—
for Indoor Use**

Provides a degree of protection from dripping liquids (non-corrosive), falling dirt and dust. Designed to meet tests for drip, dust and rust resistance. Constructed of sheet steel. Hole plugs cover pilot device holes. There are no knockouts, hub cover plates or hubs installed.

Safety Interlock

The Type 12 enclosure can be ordered with a safety interlock on the door that can be padlocked off. A vault-type door latch system is used. A tapered plate holds the gasketed door tight against the case edge to provide a positive seal. The special door interlock consists of the door handle and a screwdriver operated cover defeater.

The cover defeater and the disconnect interlock defeater are both recessed screwdriver operated devices that cannot be manipulated with other types of tools.

Enclosure Ratings

IEC IP Index of Protection Ratings

First Number	Description	Second Number	Description
0	No protection	0	No protection
1	Protection against solid objects greater than 50 mm	1	Protection against vertically falling drops of water
2	Protection against solid objects greater than 12 mm	2	Protection against dripping water when tilted up to 15 degrees
3	Protection against solid objects greater than 2.5 mm	3	Protection against spraying water
4	Protection against solid objects greater than 1 mm	4	Protection against splashing water
5	Total protection against dust—limited ingress (dust protected)	5	Protection against water jets
6	Total protection against dust (dust-tight)	6	Protection against heavy seas
		7	Protection against the effects of immersion
		8	Protection against submersion

The UL®, NEMA and IEC organizations (and other international groups) define degrees of protection provided by electrical enclosures with respect to personnel, equipment within the housing and the ingress of water.

Subtle differences do exist between the test procedures and specifications of these organizations.

To claim ratings to NEMA type specifications, the testing is performed and certified by the manufacturers themselves.

To comply to UL and IEC specifications, the manufacturers must submit product samples, materials used and other data to an independent testing laboratory before ratings can be claimed.

In addition, IEC “IP” ratings differ from NEMA type in that they do not apply to protection against the risk of explosion or conditions such as humidity, corrosive gases, fungi or vermin. In addition, different parts of the equipment can have different degrees of protection and still comply.

The table below is a comparison of the NEMA/UL/IEC enclosure specifications to be used as an approximate reference only. **Do not use the table to convert from IEC to NEMA designations.**

NEMA/UL/IEC Enclosure Type Cross-Reference—Approximate

IEC 529 does not specify equivalents to NEMA enclosure types 7, 8, 9 or 10.

NEMA Enclosure Rating	IP10	IP20	IP21	IP22	IP23	IP30	IP31	IP32	IP33	IP40	IP41	IP42	IP43	IP50	IP51	IP52	IP53	IP54	IP55	IP56	IP60	IP61	IP62	IP63	IP64	IP65	IP66	IP67	IP68

IEC Environmental Enclosure Ratings—Examples of Designations

An enclosure with this designation is protected against the penetration of solid objects greater than 1.0 mm and against splashing water.

An enclosure with this designation is protected against the penetration of solid objects greater than 12 mm and against splashing water.

Motor Circuit Elements

Disconnect Switch—horsepower rated—located in sight of controller—arranged for padlocking in open position—disconnects motor and controller from ungrounded power conductors—position indicating—readily accessible—115% carrying capacity of full load motor current—interrupting capacity of stalled motor current—may serve as disconnect for more than one motor if motors are driving parts of a single machine or motors are all in a single room within sight of disconnecting means, must equal sum of horsepower ratings to be disconnected—device may be general use switch, motor circuit switch or circuit breaker meeting code requirements—disconnecting means should contain motor branch-circuit short-circuit and ground fault protection.

Motor Running Overcurrent Protection—called overload relay—protects motor and control apparatus against overheating due to motor overload—does not protect against short-circuits or ground faults—selected to trip at not more than 125% full load motor current, 40°C rise motors—115% all other motors—continuous duty motor protection—intermittent duty motors protected by branch circuit protection—sufficient time delay to permit motor to start and accelerate load without tripping—sensing devices (heater coils) in ungrounded conductor for single-phase—three sensing devices (heater coils) required for three-phase.

Contactor—starting, stopping motor it controls—interrupt stalled motor current—horsepower rated—not lower than horsepower of motor controlled—contactor not in sight of connected motor must have disconnect capable of locking in open position or manually operable switch that will prevent contactor closing within sight of motor—interrupt all ungrounded power lines—manually or magnetically operated.

Controller or Starter—non-combination contains contactor and motor running overcurrent protection in one enclosure—starts, stops, protects and regulates motor—combination starters contain disconnecting means, branch short-circuit protection in same enclosure. (See motor control sections—three-phase, single-phase and DC.)

Reduced Voltage—restrictions in power supply capacity or machine design may require reduced voltage starting—motor connected to power supply at voltage lower than supply voltage—requires use of primary resistance, reactance or use of autotransformer—special motor designs such as part winding and wye-delta considered as reduced voltage starting.

Typical Motor Circuit

Power Supplies

All electrical power supplied as AC or DC—primarily AC—generation, transmission and some distribution of power at high voltage—most power distribution at use voltage for industrial and residential is 600V and under—AC power generally at a frequency of 60 Hz—50 and 25 Hz used in some specific areas—AC distribution at use location single- or three-phase—limited areas have two-phase.

Single-Phase Power Supply

Single-Phase—

two-wire, 120V one line grounded—120/240V three-wire center line grounded—residential distribution, lighting, heat, fractional horsepower motors, business machines.

Three-Phase Power Supply

Three-Phase—

three-wire delta 220/440V, 550V—four-wire wye 120/208 and 277/480V neutral line grounded—primary industrial power distribution—main motor drives, integral horsepower motors, lighting, heating, fractional horsepower motors, business machines—used as three-phase or single-phase power supply.

Squirrel Cage Speed

AC Squirrel Cage Motor—

single- or three-phase—single-phase requires starting winding—three-phase self-starting—stationary stator winding—no electrical connection to short circuited rotor—torque produced from magnetic reaction of stator and rotor fields—speed a function of supply frequency

and number of electrical poles wound on stator—considered as constant speed even though speed decreases slightly with increased load—high inrush currents during starting on full voltage—rugged construction—easily serviced and maintained—high efficiency—good running power factor when delivering full load—requires motor control only for stator windings.

Functions of Control

Controller functions to start, stop, reverse, regulate and protect connected motor—when functions do not include speed regulation, device is known as a starter rather than controller—**general** applications of control functions on fans, pumps, heating and applications of variable torque and horsepower where relatively infrequent cycling is necessary—functions usually starting and stopping with or without motor running overcurrent protection—

manual or magnetic control—**Commercial and Industrial** control functions for constant horsepower, constant or variable torque machine loads, constant torque metal working machinery, variable torque and horsepower fans and blowers, constant power heating, lighting, pumps and motors for all types of applications—may include speed regulation—good for cycling or infrequent starting and stopping—manual or magnetic.

Remote and Local Control

Local Control—controlling or sensing device, master switch or pilot device initiating operation located in same enclosure as controller.

Remote Control—controlling devices located at some other point than controller—may have more than one operating point with control devices connected in parallel or in series, depending on operating sequence required.

Wiring Diagrams

A symbolic representation of operation and function of control devices.

Jogging, Inching, Plugging Service

Jogging or inching—momentary operation of driven machine for small movement or positioning—requires non-maintained operator and electrical control circuit—control subject to motor inrush current on each jog or inch cycle—contactor derated where the contactor is opened or closed more than five times per minute or more than ten times in a 10-minute period.

Plugging—plugging stop or plugging reverse—reverse power supplied to motor—motor generates braking—contactors subjected to higher than normal motor inrush during plugging—requires reversing contactors—contactor derated for plugging service.

Freedom Breaker Combination—
Bi-Metallic OL

Freedom Fusible Combination—
C440 SSOL

Product Description

Eaton's Freedom Series™ starters and contactors feature a compact, space-saving design, high strength, impact and temperature resistant insulating materials.

Features

- C440 solid-state electronic overload providing reliable, accurate and value-driven protection, including communication capabilities, while reducing inventory carrying costs with wide FLA adjustment (5:1) and selectable trip class
- Adjustable bimetallic ambient compensated overload relays with interchangeable heater packs—available in three basic sizes, covering applications up to 900 hp
- Fixed heater overloads optional
- A full line of snap-on accessories—top and side mounted auxiliary contacts, solid-state and pneumatic timers, and so on
- Straight-through wiring—line lugs at top, load lugs at bottom
- Horizontal or vertical mounting on upright panel for application freedom
- Screw type power terminals have captive, backed-out self-lifting pressure plates with $\pm$ screws—reduced wiring time
- Accessible terminals for easy wiring. Optional fingerproof shields available to prevent electrical shock
- Top located coil terminals convenient and readily accessible. 45 mm contactor magnet coils have three terminals, permitting either top or diagonal wiring—easy to replace European or U.S. style starters or contactors without changing wiring layout
- Encapsulated dual voltage/frequency magnet coils—permanently marked with voltage, frequency and part number
- Designed to meet or exceed UL, CSA®, IEC, VDE, BS and other international standards and listings

Standards and Certifications

Note: See **Tab 17** for additional information on standards and certifications that apply to all enclosed control products.

- UL Listed
- cUL® Listed (indicates appropriate CSA Standard investigation)
- ABS Type Approved
- OSHPD Certified (OSP-0015-10)

Certified Type 2 Coordination

Eaton's Freedom Series NEMA starters are UL Certified to achieve IEC 947 Type 2 coordination against 100,000 A short-circuit fault currents. Any brand of properly selected fuse can be used. Type 2 coordination means that the starter will be suitable for further use following a short-circuit fault.

ISO 9001 Certification

When you turn to Eaton’s products, you turn to quality. The International Standards Organization (ISO®) has established a series of standards acknowledged by 91 industrialized nations to bring harmony to the international quest for quality. The ISO certification process covers 20 quality system elements in design, production and installation that must conform to achieve registration. The enclosed control is manufactured in our Fayetteville, NC plant, and this facility is registered ISO 9001. This commitment to quality results in increased product reliability and total customer satisfaction.

Freedom NEMA contactors and starters are extremely rugged products built for any application. Their long electrical/mechanical life is extended through easy maintainability.

- Meets and exceeds all UL and CSA standards
- Sized based on standard NEMA size classifications
- Designed and built for a variety of demanding applications
- Easy coil change and inspectable/replaceable contacts
- Available open and in Type 1, 3R, 4, 4X, 7/9 and 12 enclosures

Short-Circuit Protection

Fuses and inverse-time circuit breakers may be selected per Article 430, Part D of the National Electrical Code to protect motor branch circuits from fault conditions. If higher ratings or settings are required to start the motor, do **not** exceed the maximum as listed in Exception No. 2, Article 430-52.

Notes

① Use for 0–3, HMCP 600 V applications only.

② When control power transformer modification codes (**C1–C11**) are used or when starter class includes CPT (that is ECN07, 18) see the table at right for system voltage code.

C440 Solid-State Overload Modifications

Reliability and Improved Uptime

- C440 provides the users with peace of mind knowing that their assets are protected with the highest level of motor protection and communication capability in its class
- Extends the life of plant assets with selectable motor protection features such as trip class, phase unbalance and ground fault
- Protects against unnecessary downtime by discovering changes in your system (line/load) with remote monitoring capabilities
- Status LED provides added assurance that valuable assets are protected by indicating the overload operational status

Flexibility

- Improves return on investment by reducing inventory carrying costs with wide FLA adjustment (5:1) and selectable trip class
- Design incorporates built-in ground fault protection thus eliminating the need for separate CTs and modules
- Flexible communication with optional I/O enables easy integration into plant management systems for remote monitoring and control

Monitoring Capabilities

- Individual phase currents RMS
- Average three-phase current RMS
- Thermal memory
- Fault indication (overload, phase loss, phase unbalance, ground fault)

Safety

- IP20 rated terminal blocks
- Available in Eaton's industry leading FlashGard MCCs
- Tested to the highest industry standards such as UL, CSA, CE and IEC
- RoHS compliant

For solid-state overload enclosed control, add R63 or R64 modification code after the base Catalog Number.
(Example, ECN0501AAA-**R63/B**).

Notes

^① Features:

- Self-powered
- Phase loss protection
- Current adjustment knob
- ±1% repeat accuracy
- 1NO and 1NC isolated contacts

^② Not UL Listed.

Cover Control

Product Selection

2

Type 1 Non-Combination Cover Control (Box 1 Only)

- Cover control for non-combination starters uses M22 style devices as standard
- Pushbuttons are momentary type
- Field convertible selector switches from momentary to maintained operation and vice versa
- Cover control kits include hardware, M22 pushbuttons, bracket and pre-wired wire harnesses
- See Volume 7, Tab 1, for more details on M22 pushbuttons

Type 1 Non-Combination Cover Control (Box 1 Only)

Box 1 offering includes FVNR contactor sizes 00–2, electronic FVNR starters size 00–2 and bi-metallic FVNR starters size 00–1.

480 Vac	C
12–30 Vac/Vdc	T

Type 1 Non-Combination Cover Control (Box 2 and Larger Enclosures Only)

- Cover control for combination starters uses 10250T style devices as standard
- Selector switches are maintained with lever operators
- Pushbuttons are momentary type with extended pushbutton
- The kit includes hardware and connecting wires (where possible)
- For factory installed control devices other than shown below, refer to modification codes, **Tab 15**

Type 1 Cover Control**Type 1 Non-Combination Cover Control (Box 2 and Larger Enclosures Only)**

Box 2 and Larger Enclosure offering includes contactors size 3–5, electronic starters size 3–5 and bi-metallic starters size 2–5.

- ^③ Order quantity (2) of **C400T10**.

Type 1 Non-Combination Empty Enclosure (Box 1 Only)

There is a universal empty enclosure for the non-metallic Type 1 Non-Combination Box 1 regardless of the starter or the contactor needed. The only difference is the length of the easily interchangeable reset rod. The reset rod kit provides everything needed to install the correct reset rod, including all the reset rod lengths, a protective shroud, a paddle and a reset button with nut.

Box 1 offering includes FVNR contactors size 00–2, FVR contactors size 00–0, FVNR electronic starters size 00–2, and FVNR bi-metallic starters size 00-1.

Empty Enclosure Stocking Needs	Catalog Number
Empty enclosure	C899B001
Reset rod kit	RESET001

The table below shows which reset rod is used with each starter or contactor.

Starter or Contactor	Reset Rod Length
NEMA FVNR Size 00–2, solid-state overload	0.43-inch reset
NEMA FVNR Size 00–1, bi-metallic overload	1.68-inch reset
All NEMA FVNR and FVR contactors	No reset needed

FVNR Solid State
OL Reset—0.43 inches

FVNR Bi-Metallic
OL Reset—1.68 inches

Contactors

Non-Reversing Contactors

2

Features

- One-phase or three-phase magnetic
- Two-, three-, four- or five-pole non-reversing or three-pole reversing
- 600 V maximum

Notes

^① Maximum horsepower rating of contactors for 380 V 50 Hz applications.

NEMA Size	00	0	1	2	3	4	5	6
Horsepower	1-1/2	5	10	25	50	75	150	300

^② The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.

Example: ECN0144A3A. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.

To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

^③ Type 4 (painted steel) sizes 7–9.

^③ Type 4 (painted steel) sizes 6–9.

Starters

Non-Combination Starters

2

Features

- C440 Solid-State Overload or Bi-Metallic Overload offering available
- Three-phase or single-phase magnetic
- Three-pole non-reversing or three-pole reversing
- 600 V maximum

Notes

Starters do not include heater packs. Select one carton of three heater packs. For heater pack selection, see **Tab 15**.

Starters with electronic overload, see Modification Codes in **Tab 15**, or solid-state overload codes on **Page V10-T2-5**.

Cover control is indicated by the ninth digit. For example, ECN0511AJA is a HOA switch with red run light.

See the cover control table on **V10-T2-6–V10-T2-8** for full offering.

① Maximum horsepower rating of contactors for 380 V 50 Hz applications.

NEMA Size	00	0	1	2	3	4	5	6
Horsepower	1-1/2	5	10	25	50	75	150	300

^④ Type 4 (painted steel) sizes 6–9.

Combination Starters—Fusible and Non-Fusible**Features**

- Three-phase magnetic
- Three-pole non-reversing or reversing
- Standard interchangeable heater OLR
- Optional electronic overload
- 600 V maximum
- 100,000 rms short-circuit rating with fuses

Notes

Starters do not include heater packs. Select one carton of three heater packs. For heater pack selection, see **Tab 15**.

Starters with electronic overload, see Modification Codes in **Tab 15**, or solid-state overload codes on **Page V10-T2-5**.

- ① The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.
Example: ECN16A4AAB. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.
To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

- ② All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.

- ③ Type 12 enclosure is without safety door interlock. When safety door interlock is required, add modification **E11**.

Notes

Starters do not include heater packs. Select one carton of three heater packs. For heater pack selection, see **Tab 15**.

Starters with electronic overload, see Modification Codes in **Tab 15**, or solid-state overload codes on **Page V10-T2-5**.

① The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.
Example: ECN1644AAH. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.
To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

② All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.

③ Type 12 enclosure is without safety door interlock. When safety door interlock is required, add modification **E11**.

④ Type 4 (painted steel) sizes 6–9.

⑤ Supply hp, voltage, FLA and whether motor is design E or not when ordering the starter.

⑥ For 1250 and 1600 hp ratings at 460 V, consult Eaton.

Notes

Starters do not include heater packs. Select one carton of three heater packs. For heater pack selection, see **Tab 15**.

Starters with electronic overload, see Modification Codes in **Tab 15**, or solid-state overload codes on **Page V10-T2-5**.

^① Fuse clips are for Class R fuses only. For H and J fuses, see modifications in **Tab 13**.

^② The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.
Example: ECN1604AAB-E3. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.
To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

^③ To order Type 12 enclosures with safety door interlock add modification **E11**.

Notes

Starters do not include heater packs. Select one carton of three heater packs. For heater pack selection, see **Tab 15**.

Starters with electronic overload, see Modification Codes in **Tab 15**, or solid-state overload codes on **Page V10-T2-5**.

- ① The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.
Example: ECN1751AAK. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.
To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

- ② All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.
③ Type 12 enclosure is without safety door interlock. When safety door interlock is required, add modification **E11**.
④ Type 4 (painted steel) sizes 6–9.
⑤ Supply hp, voltage, FLA and whether motor is design E or not when ordering the starter.
⑥ For 1250 and 1600 hp ratings at 460 V, consult Eaton.

Notes

Starters do not include heater packs. Select one carton of three heater packs. For heater pack selection, see **Tab 15**.

Starters with electronic overload, see Modification Codes in **Tab 15**, or solid-state overload codes on **Page V10-T2-5**.

^① 100,000 rms short-circuit rating.

^② Other control power transformer primary and/or secondary voltages, see **Page V10-T2-4**.

^③ The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit. Example: ECN1804EAB. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**. To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

^④ All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.

^⑤ Type 12 enclosure is without safety door interlock. When safety door interlock is required, add modification **E11**.

^⑥ Fuse clips are for Class R fuses. For H and J fuses, see modifications in **Tab 15**.

Notes

Starters do not include heater packs. Select one carton of three heater packs. For heater pack selection, see **Tab 15**.

Starters with electronic overload, see Modification Codes in **Tab 15**, or solid-state overload codes on **Page V10-T2-5**.

① Other control power transformer primary and/or secondary voltages, see **Page V10-T2-4**.

② The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.
Example: ECN1854EAA. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.
To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

③ All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.

④ Type 12 enclosure is without safety door interlock. When safety door interlock is required, add modification **E11**.

⑤ Type 4 (painted steel) sizes 6–9.

⑥ Supply hp, voltage, FLA and whether motor is design E or not when ordering the starter.

⑦ For 1250 and 1600 hp ratings at 460 V, consult Eaton.

Combination Starters—Circuit Breaker**Features**

- Three-phase magnetic
- Three-pole non-reversing or reversing
- Standard interchangeable heater OLR
- Optional electronic overload
- 600 V maximum
- 100,000 rms 480 V, 25,000 rms 600 V

Notes

Starters do not include heater packs. Select one carton of three heater packs. For heater pack selection, see **Tab 15**.

Starters with electronic overload, see Modification Codes in **Tab 15**, or solid-state overload codes on **Page V10-T2-5**.

① For other magnet coil voltages substitute the eighth digit with appropriate digit based on modification table on **Page V10-T2-4**.

② The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.
Example: ECN2214AAC. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.
To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

③ All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.

④ Type 12 enclosure is without safety door interlock. When safety door interlock is required, add modification **E11**.

Notes

Starters do not include heater packs. Select one carton of three heater packs. For heater pack selection, see **Tab 15**.

Starters with electronic overload, see Modification Codes in **Tab 15**, or solid-state overload codes on **Page V10-T2-5**.

① 100,000 rms short-circuit—480 V; 25,000 rms short-circuit—600 V.

② For other magnet coil voltages substitute the eighth digit with appropriate digit based on modification table on **Page V10-T2-4**.

③ The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.

Example: ECN2304AAC. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**. To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

④ All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.

⑤ Type 12 enclosure is without safety door interlock. When safety door interlock is required, add modification **E11**.

Notes

Starters do not include heater packs. Select one carton of three heater packs. For heater pack selection, see **Tab 15**.

Starters with electronic overload, see Modification Codes in **Tab 15**, or solid-state overload codes on **Page V10-T2-5**.

^① 100,000 rms short-circuit—480 V; 25,000 rms short-circuit—600 V.

^② For other magnet coil voltages substitute the eighth digit with appropriate digit based on modification table on **Page V10-T2-4**.

^③ The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.

Example: ECN2463EAL. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**. To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

^④ All Type 12 enclosures are standardized with external reset. For internal reset, order modification code R5.

^⑤ Type 12 enclosure is without safety door interlock. When safety door interlock is required, add modification E11.

^⑥ Type 4 (painted steel) sizes 6–9.

^⑦ Provide FLA to size disconnect properly.

CAUTION

READ AND FOLLOW INSTRUCTIONS PRIOR TO WIRING OR CONNECTING POWER!
THIS PRODUCT CAN BE FACTORY OR FIELD CONFIGURED FOR MULTIPLE CONTROL MODES OR CONTROL VOLTAGES. CHECK NAMEPLATE FOR COIL VOLTAGE.

SEPARATE CONTROL POWER

FOR COIL VOLTAGES 120V AND LESS: CONNECT SEPARATE CONTROL LINES TO THE NO. 81 TERMINAL ON THE TOP ADDER AUX. AND TO THE NO. 96 TERMINAL ON THE OVERLOAD RELAY.

FOR COIL VOLTAGES GREATER THAN 120V: REMOVE WIRE "C2" IF SUPPLIED. IF WIRE "C1" IS TERMINATED ON L1, DISCONNECT FROM L1. CONNECT SEPARATE CONTROL LINES TO THE "C1" WIRE OR APPROPRIATE PILOT DEVICE TERMINAL PER DIAGRAM AND TO THE NO. 96 TERMINAL ON THE OVERLOAD RELAY.

COMMON CONTROL POWER

FOR COIL VOLTAGES 120V AND LESS: ADD WIRE "C2" IF NOT SUPPLIED. ADD CONNECTOR BETWEEN L1 TERMINAL AND THE NO. 81 TERMINAL ON THE TOP ADDER AUX. OR APPROPRIATE PILOT DEVICE TERMINAL PER DIAGRAM.

FOR COIL VOLTAGES GREATER THAN 120V: ADD WIRE "C1" AND "C2" IF NOT SUPPLIED.

A200 Full Voltage Controls

2

Product Description

Eaton's A200 Series panels feature A200 family magnetic starters which are 600 V rated devices available in Nema Sizes 00-6.

Features

Sizes 00–4

- Straight-through wiring, up-front, out-front terminals—for ease in installation
- Unique accessory mounting cavities—reduce panel space requirements
- Snap-in accessories—for application flexibility
- Vertical and horizontal Interlocking—capability increases application flexibility
- Ambient compensated overload relays—available as standard, offering superior motor protection in variable motor/controller environments
- Isolated normally open relay contact—available in kit mounting form on Type B overload relay

Contents

Description

A200 Full Voltage Controls	
Catalog Number Selection	V10-T2-59
Product Selection	
Combination Non-Reversing Starters— Circuit Breaker.	V10-T2-60
Combination Non-Reversing Starters— Circuit Breaker with CPT.	V10-T2-62

Sizes 5–9

- Rectified AC/DC coils—available to reduce premature drop-out or “kiss” problems due to inherent low voltage conditions
- Clapper design—armature assembly pivots on needle bearings resulting in quick, smooth opening and closing of the magnet
- Stainless steel kick-out spring—assures quick, positive drop-out time
- Front removable parts—all current carrying parts front removable for easy inspection and maintenance

Standards and Certifications

- UL Listed
- cUL Listed (indicates appropriate CSA Standard investigation)
- OSHPD Certified (OSP-0015-10)

Note: See **Tab 17** for additional information on standards and certifications that apply to all enclosed control products.

Notes

Starters do not include heater packs. Select one carton of three heater packs. For heater pack selection, see **Tab 15**.

① For ambient compensated overload relay with auto-reset, add suffix **D**.

② For other magnet coil voltages substitute the eighth digit with appropriate digit based on modification table on **Page V10-T2-4**.

③ The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.

Example: EC222A4AAC. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**. To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

④ All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.

⑤ Type 12 enclosure is without safety door interlock. When safety door interlock is required, add modification **E11**.

Notes

Starters do not include heater packs. Select one carton of three heater packs. For heater pack selection, see **Tab 15**.

① For ambient compensated overload relay with auto-reset, add suffix **D**.

② For other magnet coil voltages substitute the eighth digit with appropriate digit based on modification table on **Page V10-T2-4**.

③ The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.
Example: EC224A4EAC. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.
To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

④ All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.

⑤ Type 12 enclosure is without safety door interlock. When safety door interlock is required, add modification **E11**.

Freedom Multispeed Starters

2

Product Description

Eaton’s multispeed panels feature Eaton’s Freedom Series starters and contactors with a compact, space-saving design, high strength, impact and temperature resistant insulating materials.

Features

Two-speed starters are designed for starting and controlling both separate (two-winding) and reconnectable (one-winding) motors. Separate winding, wye-wye motors have a separate winding for each speed. Reconnectable, consequent pole motors use the same winding for both speeds. All standard starters are wired for selective control.

Y	240/480/600 wired for 480 V	24
Z	By description	—

Notes

① Use for Sizes 0–3, HMCP 600 V applications only.

② When control power transformer modification codes (C1–C11) are used or when starter class includes CPT, see the table at right for system voltage code.

Cover Control

2

Flange Control Kits

For on-the-job conversion of Type 1, 3R, 4X and 12 enclosed starters. Knockouts are provided on the Type 1 flange. Type 3R, 4X and 12 have prepunched holes with removable hole plugs.

Factory Installed

To order factory installed pilot devices, change the ninth character of the catalog number to the alpha shown in the table below. Example: to order an **ECN3414CAA** with FAST/OFF/SLOW selector switch and two red pilot lights, change the **A** to **J**, that is, ECN3414C**J**A.

Notes

- ^① Type 1, NEMA Sizes 00–2 non-combination ONLY.
^② Type 1, NEMA Sizes 3–7 non-combination PLUS all Type 3R, 4X, 12 non-combination PLUS all combination.
^③ Uses a FAST/SLOW/OFF pushbutton.
^④ Add code letter from table below to catalog number for voltage—kits only. Example: C400GK94**B**

Rating	Code Letter	Rating	Code Letter	Rating	Code Letter
120 V 60 Hz	A	240 V 60 Hz	B	480 V 60 Hz	C
208V 60 Hz	E	380 V 50 Hz	L	600 V 60 Hz	D

- ^⑤ Order quantity two of C400T9 ^④.

Non-Combination Starters

Features

- Three-phase magnetic, three-pole
- Interchangeable heater OLR
- 600 V maximum

Notes

Starters do not include heater packs. Select two cartons of three heater packs (two overload relays—one for each speed). For heater pack selection, see **Tab 15**.

① Maximum horsepower rating of starters for 380 V 50 Hz applications.

NEMA Size	0	1	2	3	4	5	6
Horsepower	5	10	25	50	75	150	300

② The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit. Example: ECN3404AAA. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**. To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

③ Type 4 (painted steel) sizes 6.

^③ Type 4 (painted steel) sizes 6.

Combination Starters

Features

- Choice of fusible/non-fusible combination with disconnect switch or combination HMCP or magnetic trip circuit breaker
- Three-phase magnetic, three-pole
- Interchangeable heater OLR
- 600 V maximum

Notes

Starters do not include heater packs. Select two cartons of three heater packs (two overload relays—one for each speed). For heater pack selection, see **Tab 15**.

① Maximum horsepower rating of starters for 380 V 50 Hz applications.

NEMA Size	0	1	2	3	4	5	6
Constant or variable torque	5	10	25	50	75	150	300
Constant horsepower	3	7-1/2	20	40	60	100	200

② The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit. Example: ECN3604AAA. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**. To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

③ Type 4 (painted steel) sizes 6.

Notes

Starters do not include heater packs. Select two cartons of three heater packs (two overload relays—one for each speed).

For heater pack selection, see **Tab 15**.

^① Maximum horsepower rating of starters for 380 V 50 Hz applications.

NEMA Size	0	1	2	3	4	5	6
Horsepower	3	7-1/2	20	40	60	100	200

^② The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.

Example: ECN3804AAB. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.

To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

^③ Type 4 (painted steel) sizes 6.

Notes

Starters do not include heater packs. Select two cartons of three heater packs (two overload relays—one for each speed). For heater pack selection, see **Tab 15**.

- ① Starters with 120 V coil (for separate control) are available. To order, substitute the letter **A** for the eighth character of the listed catalog number.
- ② The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit. Example: ECN3904EAC. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**. To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.
- ③ All Type 12 enclosures are standardized with external reset. For internal reset, order mod code **R5**.
- ④ Type 12 enclosure is without safety door interlock.

Notes

Starters do not include heater packs. Select two cartons of three heater packs (two overload relays—one for each speed).

For heater pack selection, see **Tab 15**.

① Starters with 120 V coil (for separate control) are available. To order, substitute the letter **A** for the eight character of the listed catalog number.

② The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.

Example: ECN3934EAG. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.

To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

③ All Type 12 enclosures are standardized with external reset. For internal reset, order mod code **R5**.

④ Type 12 enclosure is without safety door interlock.

⑤ Supply hp, voltage, FLA and whether motor is design E or not when ordering the starter.

⑥ Type 4 (painted steel) size 6.

Notes

Starters do not include heater packs. Select two cartons of three heater packs (two overload relays—one for each speed).

For heater pack selection, see **Tab 15**.

① Starters with 120 V coil (for separate control) are available. To order, substitute the letter **A** for the eight character of the listed catalog number.

② The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.

Example: ECN4004EAC. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.

To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

③ All Type 12 enclosures are standardized with external reset. For internal reset, order mod code **R5**.

④ Type 12 enclosure is without safety door interlock.

Non-Metallic Enclosure—Contactors and Starters

Product Description

XT non-metallic 4X starters are the latest addition to our broad line of pre-engineered solutions that make it easy to get an enclosed starter fast! These sturdy, uncomplicated starters are economical, but built to last. Components are all housed in a dust-tight, rain-tight, oil-tight, water-tight and corrosion resistant polycarbonate insulated enclosure. In most cases, **XT** non-metallic 4X starters are available from stock for next day delivery.

Reliable Protection

Each starter features an Eaton **XT** IEC thermal overload relay. Fourteen overload sizes are available to complete the starter, providing adjustable

settings for 0.1 to 32 full load amps. Because of its direct mount design, the **XT** relay and resulting starter command a very small footprint.

Clever, Convenient Design to 25 hp

Six different base models (single- and three-phase) are available, ranging from fractional to 25 hp units (at 575 V). This allows you to closely match the starter to your application.

Each starter is equipped with a telescopic base-mount for the pilot device contact blocks. This eliminates all wiring between the cover and starter base, making commissioning and troubleshooting a snap.

Features and Benefits

- Single- and three-phase enclosed starters to 25 hp (at 575 V)
- Rugged IP65 polycarbonate enclosure equivalent to NEMA 1, 12, 13, 3R and 4X environmental protection
- All starters feature the modern **XT** contactor family from Eaton in your choice of control voltage from 24 Vac to 600 Vac
- Class 10 motor protection is provided by adjustable bimetal overload relays
- Standard starters feature START/STOP double pushbuttons and a RESET selected from our rugged M22 pilot device line
- Other control options include OFF–ON or HAND–0–AUTO selector switches, with or without pilot light
- All starters use electrical operators to energize and de-energize the starter, providing longer component lifespan and the option for two-wire control
- 5 hp starters are only six inches high; 25 hp starters are less than 10 inches high

Standards and Certifications

Note: See **Tab 17** for additional information on standards and certifications that apply to all enclosed control products.

- UL Listed/CSA/IEC

Product Configuration Overview

Starter sizes (mm)

- To 5 hp (at 575 V): 160 x 100 x 145 (L x W x D)
- To 20 hp (at 575 V): 200 x 120 x 160 (L x W x D)
- To 25 hp (at 575 V): 240 x 160 x 160 (L x W x D)

Phases

- Available in single- and three-phase

Contactors

- From miniature to 32 amps

Voltages

- 50 Hz: 110 V, 23 V, 415 V
- 60 Hz: 24 V, 120 V, 208 V, 240 V, 480 V, 600 V

Pilot devices

- START/STOP double-pushbutton
- ON–OFF selector switch
- HAND–0–AUTO selector switch

Illumination options

- Red light 85–264 Vac
- Red light 12–30 Vac/Vdc
- Without illumination

Metallic Enclosure—Contactors and Starters

Product Description

Eaton's **XT** line includes IEC contactors, starters and combination motor controllers (CMCs). Designed to meet international standards, the enclosed control **XT** line (ECX), carries UL and cUL certifications.

Features and Benefits

- AC control from 12 V to 600 V 50/60 Hz
- DC control from 24 V to 220 V
- Available with screw or spring cage terminals
- Reversing or non-reversing contactors and starters
- AC-3 contactor ratings to 1000 A and AC-1 contactor ratings to 2000 A
- Non-reversing starters to 650 A
- Panel or DIN rail mounting to 65 A
- IP20 finger and back-of-hand proof
- Large ambient temperature range, -25 °C to +50 °C [-13 °F to +122 °F]
- AC and DC controlled contactors in the same compact frame
- Low power consumption DC coils
- Built-in NO or NC auxiliary contacts to 32 A
- Plug-in accessories for reduced installation time
- Types 1 (IP23), 4 (IP66), 4X (IP66), 12 (IP65) and 3R (IP32)
- Circuit breakers, fused, non-fused and non-combination designs available
- Opaque (standard) or clear covers available on non-metallic Halyester enclosure option

Standards and Certifications

Note: See **Tab 17** for additional information on standards and certifications that apply to all enclosed control products.

- Fusible—with Class J fuses
 - UL Listed
 - cUL Listed ①
- Circuit Breaker HMCP/E
 - UL Listed
 - cUL Listed ①

Short-Circuit Ratings

- Fused, non-fused
 - 10K AIC at 600 V
- HMCP
 - 0–10 hp 15K AIC at 600 V
 - 15–125 hp 25K AIC at 600 V
- Non-combination
 - 0–1 hp 1K AIC at 600 V
 - 1.5–50 hp 5K AIC at 600 V
 - 50–200 hp 10K AIC at 600 V

Note

① cUL Listing indicates appropriate CSA standard investigation.

C440 Solid-State Overload Modifications

Reliability and Improved Uptime

- C440 provides the users with peace of mind knowing that their assets are protected with the highest level of motor protection and communication capability in its class
- Extends the life of plant assets with selectable motor protection features such as trip class, phase unbalance and ground fault
- Protects against unnecessary downtime by discovering changes in your system (line/load) with remote monitoring capabilities
- Status LED provides added assurance that valuable assets are protected by indicating the overload operational status

Flexibility

- Improves return on investment by reducing inventory carrying costs with wide FLA adjustment (5:1) and selectable trip class
- Design incorporates built-in ground fault protection thus eliminating the need for separate CTs and modules
- Flexible communication with optional I/O enables easy integration into plant management systems for remote monitoring and control

Monitoring Capabilities

- Individual phase currents RMS
- Average three-phase current RMS
- Thermal memory
- Fault indication (overload, phase loss, phase unbalance, ground fault)

Safety

- IP20 rated terminal blocks
- Available in Eaton's industry leading FlashGard MCCs
- Tested to the highest industry standards such as UL, CSA, CE and IEC
- RoHS compliant

For solid-state overload enclosed control, add R63 or R64 modification code after the base Catalog Number. (Example, ECX09G1AAA-**R63/B**).

Notes

^① Features:

- Self-powered
- Phase loss protection
- Current adjustment knob
- ±1% repeat accuracy
- 1NO and 1NC isolated contacts

^② Not UL Listed.

Cover Control

Product Selection

Type 1 Non-Combination Cover Control (Box 1 Only)

- Cover control for non-combination starters uses M22 style devices as standard
- Pushbuttons are momentary type
- Field convertible selector switches from momentary to maintained operation and vice versa
- Cover control kits include hardware, M22 pushbuttons, bracket and pre-wired wire harnesses
- See Volume 7, Tab 1, for more details on M22 pushbuttons

Type 1 Non-Combination Cover Control (Box 1 Only)

Box 1 offering includes metallic enclosures with starters up to 32 A.

Two red pilot lights (labeled FWD, REV)	P	C600M28_
Green OFF pilot light	Q	C600M10_

Note

① Add code letter from the table below to catalog number for voltage. Example: C600M101**A**.

Rating	Code Letter
85–264 Vac	A
480 Vac	C
12–30 Vac/Vdc	T

Type 1 Non-Combination Cover Control (Box 2 and Larger Enclosures Only)

- Cover control for combination starters uses 10250T style devices as standard
- Selector switches are maintained with lever operators
- Pushbuttons are momentary type with extended pushbutton
- The kit includes hardware and connecting wires (where possible)
- For factory installed control devices other than shown below, refer to modification codes, **Tab 15**

Type 1 Cover Control**Type 1 Non-Combination Cover Control (Box 2 and Larger Enclosures Only)**

Box 2 and Larger Enclosure offering includes metallic enclosures with starters larger than 32 A.

Description	Factory Installed Flange Control ^① Position 9 Cover Control Code	Field Installation Kits Catalog Number

One green pilot light	Q	C400GK41^②

Notes

^① For more available factory installed flange control, see **Page V10-T3-11**.

^② Add code letter from the table below to catalog number for voltage—kits only. Example: C400GK0B.

Rating	Code Letter	Rating	Code Letter	Rating	Code Letter
120 V 60 Hz	A	277 V 60 Hz	H	480 V 60 Hz	C
208 V 60 Hz	E	380 V 50 Hz	L	600 V 60 Hz	D
240 V 60 Hz	B				

Type 1 Non-Combination Empty Enclosure (Box 1 Only)

There is a universal empty enclosure for the non-metallic Type 1 Non-Combination Box 1 regardless of the starter or the contactor needed. The only difference is the length of the easily interchangeable reset rod. The reset rod kit provides everything needed to install the correct reset rod, including all the reset rod lengths, a protective shroud, a paddle and a reset button with nut.

Box 1 offering includes metallic enclosures with starters up to 32 A.

Empty Enclosure Stocking Needs	Catalog Number
Empty enclosure	C899001
Reset rod kit	RESET001

The table below shows which reset rod is used with each starter or contactor.

Starter or Contactor	Reset Rod Length
IEC Frame Size B and C, SSOL	0.74-inch reset
IEC Frame Size B, Bi-Metallic Overload	1.74-inch reset
IEC Frame Size C, Bi-Metallic Overload	1.30-inch reset

Notes

① 1 hp = 0.746 kW.

② Contact factory for other voltage options.

③ Voltage is listed at 60 Hz unless otherwise noted. Other voltages available upon request.

④ Select proper "XTOB" overload amperage range as per motor FLA, see **Page V10-T3-9**.

⑤ The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.

Example: ECX09B4AAA-__. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.

To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

Notes

① 1 hp = 0.746 kW.

② Contact factory for other voltage options.

③ Voltage is listed at 60 Hz unless otherwise noted. Other voltages available upon request.

④ Select proper "XTOB" overload amperage range as per motor FLA, see **Page V10-T3-9**.

⑤ The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.

Example: ECX10G4AAA-___. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.

To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

Notes

- ① 1 hp = 0.746 kW.
 ② Contact factory for other voltage options.
 ③ Voltage is listed at 60 Hz unless otherwise noted. Other voltages available upon request.
 ④ Select proper "XTOB" overload amperage range as per motor FLA, see **Page V10-T3-9**.
 ⑤ The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.
 Example: ECX25B4AAA_- . To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.
 To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

④ Select proper "XTOB" overload amperage range as per motor FLA, see **Page V10-T3-9**.

⑤ The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.

Example: ECX26G4AAF_-. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.

To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

CAUTION

READ AND FOLLOW INSTRUCTIONS PRIOR TO WIRING OR CONNECTING POWER! THIS PRODUCT CAN BE FACTORY OR FIELD CONFIGURED FOR MULTIPLE CONTROL MODES OR CONTROL VOLTAGES. CHECK NAMEPLATE FOR COIL VOLTAGE.

SEPARATE CONTROL POWER

FOR COIL VOLTAGES 120V AND LESS: CONNECT SEPARATE CONTROL LINES TO THE NO. 61 TERMINAL ON THE TOP ADDER AUX. AND TO THE NO. 96 TERMINAL ON THE OVERLOAD RELAY.

FOR COIL VOLTAGES GREATER THAN 120V: REMOVE WIRE "C2" IF SUPPLIED. IF WIRE "C1" IS TERMINATED ON L1, DISCONNECT FROM L1. CONNECT SEPARATE CONTROL LINES TO THE "C1" WIRE OR APPROPRIATE PILOT DEVICE TERMINAL PER DIAGRAM AND TO THE NO. 96 TERMINAL ON THE OVERLOAD RELAY.

COMMON CONTROL POWER

FOR COIL VOLTAGES 120V AND LESS: ADD WIRE "C2" IF NOT SUPPLIED. ADD CONNECTOR BETWEEN L1 TERMINAL AND THE NO. 61 TERMINAL ON THE TOP ADDER AUX. OR APPROPRIATE PILOT DEVICE TERMINAL PER DIAGRAM.

FOR COIL VOLTAGES GREATER THAN 120V: ADD WIRE "C1" AND "C2" IF NOT SUPPLIED.

Combination Motor Controllers

Product Description

Eaton’s XT line includes IEC contactors, starters and combination motor controllers (CMCs). Designed to meet international standards, the enclosed control XT line (ECX), carries UL and cUL certifications.

Features and Benefits

- ON/OFF rotary handle with lockout provision
- Visible trip indication
- Test trip function
- Motor applications from 0.11 A to 32 A
- Class 10 overload protection
- Built-in heater and magnetic trip elements to protect the motor
- Phase loss sensitivity
- Type 2 coordination
- Ambient compensated up to 55 °C [140 °F]
- Control inputs located at front of starter for easy access and wiring
- Wide range of coils
- DIN rail mount—XTSC...BB_
- Mounting plates—XTSC...BC_, XTSC...D motor controllers
- Adjustment dial for setting motor FLA
- Short-circuit trip at 14 times the maximum setting of the FLA adjustment dial
- UL 508 Type F CMC high fault short-circuit ratings; refer to manual motor protectors in CA08102001E
- Non-metallic and metallic enclosures in Types 1 (IP23), 4 (IP66), 4X (IP66) and 12 (IP65)
- Opaque (standard) or clear covers available on non-metallic Halcyon enclosure

Standards and Certifications

Note: See Tab 17 for additional information on standards and certifications that apply to all enclosed control products.

- UL Listed
- cUL Listed (indicates appropriate CSA Standard investigation)

Short-Circuit Ratings

- 0–12 A / B-frame MMP with B-frame contactor
 - 50K AIC at 600 V
- 13–32A/B-frame MMP with C-frame contactor
 - 18K AIC at 600 V

Note

① See Tab 1 for enclosure type/IP rating cross-reference.

Cover Control

- Cover control for combination motor control starters uses the 10250T (30 mm) family
- Selector switches are maintained with lever operators
- Pushbuttons are momentary type with extended pushbutton
- The kit includes hardware and connecting wires (where possible)
- For factory installed control devices other than shown below, refer to modification codes, **Tab 15**

Product Selection**10250T Style Combination Cover Control**

UL Rated AC Contactors

4

Product Description

Eaton's lighting contactors are designed to provide a safe, convenient means for local or remote switching of tungsten (incandescent filament) or ballast (fluorescent and mercury arc) lamp loads. They are also suitable for other loads such as low pressure and high pressure sodium lamp loads and other non-motor (resistive) loads. They are not recommended for most sign flashing loads.

These lighting contactors are designed to withstand the large initial inrush currents of tungsten lamp loads without contact welding. They are fully rated and do not require derating.

Application Description

Loads:

Ballast Lamps—Fluorescent, mercury vapor, metal halide sodium vapor, quartz—600 V maximum.

Filament Lamps—

Incandescent, infrared, heating—480 V maximum, line to line; 277 V maximum line to neutral.

Resistance Heating—

Radiant and convection heating, furnaces and ovens.

Enclosure Types
1 = Type 1—General purpose
2 = Type 3R—Rainproof
3 = Type 4—Watertight (painted)
4 = Type 4X—Watertight (304-Grade stainless steel)
6 = Type 7/9—Explosion proof
8 = Type 12—Dust-tight
9 = Type 4X—Watertight (316-Grade stainless steel)

Enclosures

Lighting contactors are available open or mounted in Type 1, 3R, 4, 4X, 12 or 7/9 enclosures.

Type 1 is for indoor, general purpose for personal protection. Knock-outs are provided in the top and bottom for conduit entry.

Type 3R is for outdoor applications and rated for rain, sleet and external ice buildup. Type 3R enclosures have knockouts in the bottom and provisions for a hub in the top.

Type 4 and 4X are for mounting indoor or outdoor and provide protection from splashing water, hose-directed water and wind-blown dust. Watertight conduit hubs are provided in the top and bottom of Type 4X enclosures. The standard Type 4X enclosures are made of 304-Grade stainless steel, providing corrosion protection. 316-Grade stainless steel construction is available as an upgrade option.

Type 12 enclosures are for indoor mounting and protect from dripping liquids, falling dirt and dust. No knockouts or hubs are provided with Type 12 enclosures.

Type 1, 3R, 4 and 12 enclosures are painted with a polyester urethane powder coat paint meeting UL requirements and the color is ANSI 61 gray. Type 1 enclosures have knockouts for cover controls. All the other types have holes plugged, ready for cover controls. Type 7/9 is also available for explosion proof applications. Please contact the factory for additional details.

Notes

- ① C30CN available in 30 A only.
 ② For normally closed poles see **Tab 15**.

Cover Control

Notes

^① For first open position (coil voltage), use the table below.

^② The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.
Example: ECC03C4A2A. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.
To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

Suffix	Coil Voltage	Suffix	Coil Voltage	Suffix	Coil Voltage
A	120/60 or 110/50	D	600/60 or 550/50	T	24/60
B	240/60 or 220/50	E	208/60	V	28/60 or 24/50
C	480/60 or 440/50	H	277/60 or 240/50	X	347/60

^③ Add **C18** modification code for three-wire control.

To get the C30CN lighting contactor with normally closed power poles, see **Tab 15**, for modification codes.

Notes

① For open position (coil voltage), use the table below:

Suffix	Coil Voltage	Suffix	Coil Voltage	Suffix	Coil Voltage
A	120/60 or 110/5	C	480/60 or 440/50	E	208/60
B	240/60 or 220/50	D	600/60 or 550/50	H	277/60

② The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.Example: ECL03B4A2A. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

③ Ampere ratings are based on a maximum load voltage of 480 V for tungsten lamp applications and 600 V for ballast or mercury vapor type applications.

Notes

^① For open position (coil voltage), use the table below:

Suffix	Coil Voltage	Suffix	Coil Voltage	Suffix	Coil Voltage
A	120/60 or 110/5	C	480/60 or 440/50	E	208/60
B	240/60 or 220/50	D	600/60 or 550/50	H	277/60

^② The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit. Example: ECL03E**4**A2A. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**. To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

^③ Ampere ratings are based on a maximum load voltage of 480 V for tungsten lamp applications and 600 V for ballast or mercury vapor type applications.

^④ UL ballast and resistive ratings only.

Operation

A permanent magnet is built into the contactor structure that will maintain the contactor in its energized state indefinitely without using control power. When

energized, a DC current is applied to the latch coil, producing a magnetic field that reinforces the polarity of the permanent magnet, pulling in the contactor. The current to

the coil is disconnected by the coil clearing interlock. In order to drop out the contactor, it is necessary to apply a field through the STOP coil in the reverse

direction to the permanent magnet. This momentarily cancels the magnetic attraction and the contactor drops out.

Notes

- ① The listed ampere ratings are based on a maximum load voltage of 480 V for tungsten lamp applications and 600 V for ballasts or mercury vapor type applications.
- ② The underscore (_) indicates missing code letter for coil selection—see table below. Example: Magnet coils with 120/110 V coils—change the eighth character to **A**. ECL14C1**A**3E.

Rating	Code Letter	Rating	Code Letter	Rating	Code Letter
120 V 60 Hz	A	240 V 60 Hz	B	480 V 60 Hz	C
208 V 60 Hz	E	277 V 60 Hz	H	600 V 60 Hz	D

- ③ The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit. Example: ECL14C**4**A3E. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**. To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

Additional common modifications are available for outside lighting for ballfields, parks, and so on:

- **E7**—Service entrance
- **E5**—Enclosure with pole mounting brackets
- **P70**—Photocell
- **T1–T25**—Timers

See **Tab 15** for details.

Accessories

Auxiliary Contacts

C30CN Electrically Held Contactors—The base C30CN product line can accept up to four auxiliary contacts (2NO/2NC), which are mounted on the top of the unit. The auxiliary contacts, rated A600, are also suitable for use on low-level circuits down to 12 V, 5 mA.

CN35 Electrically Held Contactors—Include a NO maintaining auxiliary contact mounted on the right side of the contactor or integral to the contactor. The 10–60 A devices will accept additional auxiliary contacts on the top (front) and/or sides. The 100–400 A sizes will accept side-mounted auxiliaries only.

Mechanically Held and Magnetically Latched—

Holding circuit auxiliary contact, if needed, is not included and should be added separately as an option.

Power Poles for C30CN

The C30CN can be configured with up to 12 poles (30 A maximum per pole). Power poles are available in single or double pole designs and can be mounted to provide either normally open or normally closed operation with a maximum of 12 NO poles or 8 NC and 4 NO poles. Each pole is capable of accepting up to 8 AWG wire.

Two-Wire or Three-Wire Control Module for C30CN

A mechanical latch with a two- or three-wire electronic control module delivers reliable performance and protection from such application abnormalities as line noise, leakage currents from controller outputs, or short repetitive commands burst from faulty controllers. For enclosed control, units come standard with two-wire control.

IMPORTANT: Add the **C18** modification code to get three-wire control with the C30CN contactor.

Mechanically Held Kit for C30CN

A modification kit allows the conversion of an electrically held lighting contactor into a mechanically held contactor.

Coil Kits for C30CN

The C30CN line comes in a wide range of input voltages and with coils from 24 Vac to 600 Vac.

Two-Wire Control Relay for A202

The two-wire control relay is designed to field convert three-wire magnetically latched lighting contactors to operate controls such as photocells and timers. Terminal blocks included for fast wiring installation.

Enclosed Lighting Contactors

	3 POSITION SELECTOR SWITCH (HOA)
	SIGNIFIES LOCATION OF SIDE AND TOP ADDER AUX. REFERENCED ON DIAGRAM UNDER AUX. SYMBOL

CAUTION

READ AND FOLLOW INSTRUCTIONS PRIOR TO WIRING OR CONNECTING POWER!

THIS PRODUCT CAN BE FACTORY OR FIELD CONFIGURED FOR MULTIPLE CONTROL MODES OR CONTROL VOLTAGES. CHECK NAMEPLATE FOR COIL VOLTAGE.

SEPARATE CONTROL POWER

FOR COIL VOLTAGES 120V AND LESS; CONNECT SEPARATE CONTROL LINES TO THE NO. 61 TERMINAL ON THE TOP ADDER AUX. AND TO THE NO. 96 TERMINAL ON THE OVERLOAD RELAY.

FOR COIL VOLTAGES GREATER THAN 120V; REMOVE WIRE "C2" IF SUPPLIED. IF WIRE "C1" IS TERMINATED ON L1, DISCONNECT FROM L1. CONNECT SEPARATE CONTROL LINES TO THE "C1" WIRE OR APPROPRIATE PILOT DEVICE TERMINAL PER DIAGRAM AND TO THE NO. 96 TERMINAL ON THE OVERLOAD RELAY.

COMMON CONTROL POWER

FOR COIL VOLTAGES 120V AND LESS; ADD WIRE "C2" IF NOT SUPPLIED. ADD CONNECTOR BETWEEN L1 TERMINAL AND THE NO. 61 TERMINAL ON THE TOP ADDER AUX. OR APPROPRIATE PILOT DEVICE TERMINAL PER DIAGRAM.

FOR COIL VOLTAGES GREATER THAN 120V; ADD WIRE "C1" AND "C2" IF NOT SUPPLIED.

S611 Solid-State Soft Starter

Product Description

Eaton's line of S611 reduced voltage soft starters is multi-functional, easy to install and easy to program. The S611 soft starter includes advanced feature set and user-friendly interface module to enhance system performance and reduce commissioning time. Easy communication interface, as well as metering, monitoring, and diagnostics are possible with this revolutionary soft starter.

Designed to control acceleration and deceleration of three-phase motors up to 600V, current ratings from 26 to 414 amps, and suitable for mounting in a variety of enclosures including NEMA Type 1, 12, 3R, 4, and 4X.

- Intuitive User Interface Module (UI)
- Internal run bypass
- 120 Vac control voltage
- Open architecture for serviceability (PCBs and contactors can be replaced in the field)
- Built-in overload protection
 - Adjustable trip class 5, 10, 20, 30
 - 50–100% FLA adjustment
- Selectable current limit or ramp start
- Adjustable ramp times
 - 0–180 seconds standard
 - Extended ramps available
- Adjustable torque control
- Adjustable kick start control
- Soft stop control
 - 0–60 seconds standard
 - Extended times available
- Built-in low impedance contactor
- Six SCR control in all units
- Selectable phase reversal protection
- User interface module

Features and Benefits

- Mechanical stress on system
 - Reduced wear on belts, gears, chains, clutches, shafts and bearings. You can get up to 2–6 times the life on standard belts by switching to a soft starter
- Elimination of water-hammer in pumping applications extends component life and helps limit leakage in system
- Lower shock to product on conveyor lines and material handling gear
- Able to catch motors and fans on the fly and control their acceleration
- Electrical system improvements
 - Limits the peak inrush current as required by many local codes
 - Helps to eliminate sags on the plant electrical grid when starting large loads, thus avoiding brownout conditions

User Interface Module (UI)

The S611 has an easy to use User Interface Module (UI) that allows the user to configure the device and to read system parameters and values. The UI includes an LED display and keypad to scroll through the various parameters. The UI allows the user to modify control parameters, enable or disable protections, set communication variables, monitor system values such as line voltages and currents and access the fault queue.

The UI can be removed from the S611 and remote mounted. Kits are available to door mount the DIM, enabling users to safely configure, commission, monitor and troubleshoot the system at the electrical panel without opening the enclosure door. Factory assembled units are supplied with door mounted keypad. If door mounted keypad is not needed, consult factory.

User Interface Module (UI)

Options

S611

Description	Modification Code
Pump control option	Standard
Door mounted keypad	Standard
Extended ramp	R1

Pump Control Option

- Designed to reduce “water- hammer” during start-up and stopping sequences
- Stop ramp extended to 120 seconds to help control larger motors and systems with long piping runs

Communications

The S611 has built-in communication capabilities through two communications ports to connect the soft starter to a variety of networks, including Modbus (resident), DeviceNet™, PROFIBUS®, and Ethernet.

The S611 communication parameters can be configured with the UI or through the Fieldbus.

Advanced communication configuration settings provide the system integrator with powerful tools to facilitate system optimization.

Reduced Voltage Starter

Product Description

Eaton's revolutionary design for soft starters is shown in the S801+ and S811+ soft starter products that are members of the Intelligent Technologies (*IT*) family of products. These reduced voltage soft starters are the most compact, multi-functional, easy-to-install products on the market. Their superiority begins with the control package, which features 24 Vdc control, onboard Digital Signal Processor (DSP), and use of a low impedance run contactor, all of which contribute to the *IT* soft starter's safety, advanced functionality and compact size.

Designed to control acceleration and deceleration of three-phase motors, products are available from 11 to 1000 amps and are suitable for mounting in a variety of enclosures including Type 1, 12, 3R, 4, 4X and 7/9.

- Built-in overload protection
 - Adjustable trip class 5, 10, 20, 30
 - Programmable, 31–100% FLA (3.2:1)
 - Selectable phase loss protection
- Selectable current limit or ramp start
- Adjustable ramp times
 - 0–180 seconds standard
 - Extended ramps available
- Adjustable torque control
- Adjustable kick start control
- Soft stop control
 - 0–60 seconds standard
 - Extended times available
- Built-in low impedance contactor
- Six SCR control in all units
- Selectable phase reversal protection
- Digital interface module

Features and Benefits

- Mechanical stress on system
 - Reduced wear on belts, gears, chains, clutches, shafts and bearings. You can get up to 2–6 times the life on standard belts by switching to a soft starter
- Elimination of water-hammer in pumping applications extends component life and helps limit leakage in system
- Lower shock to product on conveyor lines and material handling gear
- Able to catch motors and fans on the fly and control their acceleration
- Electrical system improvements
 - Limits the peak inrush current as required by many local codes
 - Helps to eliminate sags on the plant electrical grid when starting large loads, thus avoiding brownout conditions
- 24 Vdc advantages
 - Offers improved personnel safety by eliminating the need for 120 Vac in the enclosure
 - Soft starter able to ride through 50% voltage conditions indefinitely due to 24 Vdc power supply and 0% for up to 100 mS
- 690V option available on 180A ratings and larger

Digital Interface Module

The S811+ has an easy to use Digital Interface Module (DIM) that allows the user to configure the device and to read system parameters. The DIM includes an LCD display and keypad to scroll through the various menus. The DIM allows the user to modify control parameters, enable or disable protections, set communication variables, monitor system parameters such as line voltages and currents, and access the fault queue.

The DIM can be removed from the S811+ and remote mounted. Kits are available to door mount the DIM, enabling users to safely configure, commission, monitor and troubleshoot the system at the electrical panel without opening the enclosure door.

Options

LCD Display

- 2 line x 20 character LED back-lit LCD display
- NEMA 4 rated
- Parameters
 - Voltage L-L (AB, BC, AC)
 - Phase current
 - Average current
 - Overload current setting
 - Pole temperature
 - Relay trip class
 - Thermal pile
 - Average line current as % of FLA
 - DC control voltage
 - Start count
 - Fault history
- English or Spanish version

Options

Description	Modification Code
Pump control option	P42
Door mount keypad	K5
Extended ramp	R1

Pump Control Option

- Designed to reduce “water- hammer” during start-up and stopping sequences
- Stop ramp extended to 120 seconds to help control larger motors and systems with long piping runs

Standards and Certifications

Note: See **Tab 17** for additional information on standards and certifications that apply to all enclosed control products.

- UL Listed
- IEC 947-4-2
- EN 60947.2 (for motor controller)
- cUL (indicates appropriate CSA Standard investigation)
- ABS Type Approved
- OSHPD Certified (OSP-0015-10)

Catalog Number Selection

IT. Solid-State Soft Starters

Cover Control

Flange Control Kits

For on-the-job conversion of Type 1, 3R, 4, 4X and 12 enclosed starters. Knockouts are provided on the Type 1 flange. Type 3R, 4, 4X and 12 have prepunched holes with removable hole plugs.

Factory Installed Pilot Devices

To order factory installed pilot devices, change the ninth character of the catalog number to the alpha shown in the table below. Example: To order an **ECS90J4CAA** with START/STOP pushbuttons and a red pilot light, change the **A** to a **C**, that is, ECS90J4**CA**A.

10250T Cover Control Kits

Non-Reversing Pilot Devices

Notes

- ① Standard duty horsepower ratings are for 300% ramp current, 30 seconds ramp time, and three starts per hour. Consult Eaton for other ratings.
- ② Based on 1.15 service factor.
- ③ All *IT* soft starters are furnished with 24 Vdc coils and control power supplies. For 24 Vdc separate control, use modification code C35 and change the eighth digit to **Q** (that is, ECS90S1EAA becomes ECS90S1QAA-C35).
- ④ The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.
 Example: ECS90S4EAA. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.
 To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

Notes

- ① Standard duty horsepower ratings are for 300% ramp current, 30 seconds ramp time, and three starts per hour. Consult Eaton for other ratings.
- ② Based on 1.15 service factor.
- ③ All *IT* soft starters are furnished with 24 Vdc coils and control power supplies. For 24 Vdc separate control, use modification code **C35** and change the eighth digit to **Q** (that is, ECS90S1EAA becomes ECS90S1QAA-C35).
- ④ The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.
Example: ECS91S4EAA. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**. To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

Notes

① Digital Interface Module (DIM) is mounted on door as option.

② Standard duty horsepower ratings are for 300% ramp current, 30 seconds ramp time, and three starts per hour. Consult Eaton for other ratings.

③ Based on 1.15 service factor.

④ All *IT* soft starters are furnished with 24 Vdc coils and control power supplies. For 24 Vdc separate control, use modification code **C35** and change the eighth digit to **Q** (that is, ECS90S1EAA becomes ECS90S1QAA-C35).⑤ The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit. Example: ECS95S4EAA. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**. To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

Notes

- ① Enclosure space will also accommodate an *IT* power supply, two four-pole relays, CPT, and terminal blocks. Also includes space for a DNA module or MOV.
- ② Same as footnote ①, but CPT is not included. Upsize to B1 enclosure to include space for a CPT and a full voltage bypass contactor.

Product Description

Eaton's expanded reduced voltage starter solutions include autotransformer, part winding, and wye delta.

Features

- Autotransformer
 - High torque per amp
 - Three starting torques through taps
 - Optimal for slow starts
- Part Winding
 - Small physical size
 - Limits motor torque and current to 50% at start-up
- Wye Delta
 - Optimal for slow starts and high inertia load
 - High torque efficiency
 - Inrush restrictions at start-up

Standards and Certifications

Note: See **Tab 17** for additional information on standards and certifications that apply to all enclosed control products.

- UL Listed
- cUL (indicates appropriate CSA standard investigation)
- OSHPD Certified (OSP-0015-10)

Cover Control

Non-Reversing

Flange Control Kits

For on-the-job conversion of Type 1, 3R, 4X and 12 enclosed starters. Knockouts are provided on the Type 1 flange. Type 3R, 4X and 12 have prepunched holes with removable hole plugs.

Factory Installed Cover Control

To order factory installed pilot devices, change the ninth character of the catalog number to the alpha shown in the table below. Example: To order an **ECN0514CAA** with START/STOP pushbuttons and a red pilot light, change the **A** to a **C**, that is, **ECN0514CCA**.

Type 1 Non-Combination

Notes

^① Type 1, NEMA Sizes 00–4 non-combination ONLY.

^② Type 1, NEMA Sizes 5–9 non-combination PLUS all Type 3R, 4X, 12 non-combination PLUS all combination—NEMA sizes only.

^③ Add code letter from the table below to catalog number for voltage—kits only. Example: C400T9**B**.

Rating	Code Letter	Rating	Code Letter	Rating	Code Letter
120V 60 Hz	A	240V 60 Hz	B	480V 60 Hz	C
208V 60 Hz	E	380V 50 Hz	L	600V 60 Hz	D

Product Selection

Autotransformer

Features

- Non-combination and combination designs
- Three-phase magnetic, three-pole
- Interchangeable heater OLR
- 600V maximum

Starters do not include heater packs. Select one carton of three heater packs. Heater pack selection, Tab 15.

Notes

① All reduced voltage starters are furnished with 120V coils and control transformer connected for 120V secondary. If modification code **C35** separate control is specified, the control transformer is omitted.

② All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.

Starters do not include heater packs. Select one carton of three heater packs. Heater pack selection, **Tab 15**.

Notes

- ① All reduced voltage starters are furnished with 120V coils and control transformer connected for 120V secondary. If modification code **C35** separate control is specified, the control transformer is omitted.
- ② All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.
- ③ Type 12 enclosure is without safety door lock.

Starters do not include heater packs. Select one carton of three heater packs. Heater pack selection, **Tab 15**.

Notes

- ① All reduced voltage starters are furnished with 120V coils and control transformer connected for 120V secondary. If modification code **C35** separate control is specified, the control transformer is omitted.
- ② All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.
- ③ Type 12 enclosure is without safety door lock.
- ④ Supply hp, voltage, FLA and whether motor is design E or not when ordering the starter.

Starters do not include heater packs. Select two cartons of three heater packs (two overload relays—one for each winding). Heater pack selection, **Tab 15**.

Notes

- ① All reduced voltage starters are furnished with 120V coils and control transformer connected for 120V secondary. If modification code **C35** separate control is specified, the control transformer is omitted.
- ② The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit. Example: ECN4524EAA. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 Painted Steel, change that digit to **3**. To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.
- ③ All Type 12 enclosures are standardized with external reset. For internal reset, order modification code R5.
- ④ Type 4 (painted steel) sizes 6–8PW.

Starters do not include heater packs. Select two cartons of three heater packs (two overload relays—one for each winding). Heater pack selection, **Tab 15**.

Notes

- ① All reduced voltage starters are furnished with 120V coils and control transformer connected for 120V secondary. If modification code **C35** separate control is specified, the control transformer is omitted.
- ② The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit. Example: ECN4624EAF. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**. To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.
- ③ All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.
- ④ Type 12 enclosure is without safety door interlock.
- ⑤ Supply hp, voltage, FLA and whether motor is design E or not when ordering starter.
- ⑥ Type 4 (painted steel) sizes 6–8PW.

Wye Delta**Features**

- Open or closed transition
- Non-combination and combination designs
- Three-phase magnetic, three-pole
- Interchangeable heater OLR
- 600V maximum

Starters do not include heater packs. Select one carton of three heater packs (two overload relays—one for each winding). Heater pack selection, **Tab 15**.

Notes

- ① The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.
Example: ECN4624EAF. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.
To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.
- ② All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.
- ③ Type 12 enclosure is without safety door interlock.
- ④ Also requires matching contactor with mechanical interlock.
- ⑤ All reduced voltage starters are furnished with 120V coils and control transformer connected for 120V secondary.
If modification code **C35** separate control is specified, the control transformer is omitted.
- ⑥ Supply hp, voltage, FLA and whether motor is design E or not when ordering starter.
- ⑦ Type 4 (painted steel) sizes 6–8YD.

Starters do not include heater packs. Select one carton of three heater packs. Heater pack selection, **Tab 15**.

Notes

- ① The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.
Example: ECN4624EAF. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.
To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.
- ② All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.
- ③ Type 12 enclosure is without safety door interlock.
- ④ Also requires matching contactor with mechanical interlock.
- ⑤ All reduced voltage starters are furnished with 120V coils and control transformer connected for 120V secondary.
If modification code **C35** separate control is specified, the control transformer is omitted.
- ⑥ Supply hp, voltage, FLA and whether motor is design E or not when ordering starter.
- ⑦ Type 4 (painted steel) sizes 6–8YD.

Starters do not include heater packs. Select one carton of three heater packs. Heater pack selection, **Tab 15**.

Notes

- ① The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.
Example: ECN462**4**EAF. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.
To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.
- ② All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.
- ③ Type 12 enclosure is without safety door interlock.
- ④ Also requires matching contactor with mechanical interlock.
- ⑤ All reduced voltage starters are furnished with 120V coils and control transformer connected for 120V secondary.
If modification code **C35** separate control is specified, the control transformer is omitted.
- ⑥ Supply hp, voltage, FLA and whether motor is design E or not when ordering starter.
- ⑦ Type 4 (painted steel) sizes 6–8YD.

Starters do not include heater packs. Select one carton of three heater packs. Heater pack selection, **Tab 15**.

Notes

- ① The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.
Example: ECN462**4**EAF. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.
To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.
- ② All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.
- ③ Also requires matching contactor with mechanical interlock.
- ④ All reduced voltage starters are furnished with 120V coils and control transformer connected for 120V secondary.
If modification code **C35** separate control is specified, the control transformer is omitted.
- ⑤ Type 4 (painted steel) sizes 6–8YD.

Starters do not include heater packs. Select one carton of three heater packs. Heater pack selection, **Tab 15**.

Notes

- ① The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.
Example: ECN4624EAF. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.
To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.
- ② All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.
- ③ Type 12 enclosure is without safety door interlock.
- ④ Also requires matching contactor with mechanical interlock.
- ⑤ All reduced voltage starters are furnished with 120V coils and control transformer connected for 120V secondary.
If modification code **C35** separate control is specified, the control transformer is omitted.
- ⑥ Supply hp, voltage, FLA and whether motor is design E or not when ordering starter.
- ⑦ Type 4 (painted steel) sizes 6–8YD.

Starters do not include heater packs. Select one carton of three heater packs. Heater pack selection, **Tab 15**.

Notes

- ① The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.
Example: ECN4624EAF. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.
To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.
- ② All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.
- ③ Type 12 enclosure is without safety door interlock.
- ④ Also requires matching contactor with mechanical interlock.
- ⑤ All reduced voltage starters are furnished with 120V coils and control transformer connected for 120V secondary.
If modification code **C35** separate control is specified, the control transformer is omitted.
- ⑥ Supply hp, voltage, FLA and whether motor is design E or not when ordering starter.
- ⑦ Type 4 (painted steel) sizes 6–8YD.

Starters do not include heater packs. Select one carton of three heater packs. Heater pack selection, **Tab 15**.

Notes

- ① The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.
Example: ECN4624EAF. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.
To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.
- ② All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.
- ③ Type 12 enclosure is without safety door interlock.
- ④ Also requires matching contactor with mechanical interlock.
- ⑤ All reduced voltage starters are furnished with 120V coils and control transformer connected for 120V secondary.
If modification code **C35** separate control is specified, the control transformer is omitted.
- ⑥ Supply hp, voltage, FLA and whether motor is design E or not when ordering starter.
- ⑦ Type 4 (painted steel) sizes 6–8YD.

Starters do not include heater packs. Select one carton of three heater packs. Heater pack selection, **Tab 15**.

Notes

- ① The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.
Example: ECN4624EAF. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.
To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.
- ② All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.
- ③ Type 12 enclosure is without safety door interlock.
- ④ Also requires matching contactor with mechanical interlock.
- ⑤ All reduced voltage starters are furnished with 120V coils and control transformer connected for 120V secondary.
If modification code **C35** separate control is specified, the control transformer is omitted.
- ⑥ Supply hp, voltage, FLA and whether motor is design E or not when ordering starter.
- ⑦ Type 4 (painted steel) sizes 6–8YD.

Part Winding Pump Control**Product Description**

Standard ECN64, 65 controllers have a HAND/OFF/AUTO selector switch and START pushbutton mounted on the

flange of the enclosure and are wired as illustrated on **Page V10-T5-83**.

Note: If branch circuit protective device is 45A or greater, C320FBR1 fuse kit (panel mounted) may be required for control circuit protection per NEC 430-72.

Features

Product Overview

Product Description

Eaton's pump controllers are combination starters with accessories and modifications designed to meet the particular requirements of the irrigation, oil well, gas and other pump application industries. The enclosure is Type 3R to provide weather-tight protection and is available in several sizes, depending on the customer's control option requirements. The disconnect, contactor and overload relay are the same as used in Freedom lines of combination starters. These controllers are available in standard full voltage as well as reduced voltage configurations, with vacuum contactors as well as the standard electromechanical contactors.

Eaton's revolutionary design for soft starters is shown in the S801+ and S811+ soft starter products which are members of the Intelligent Technologies (*IT*.) family of products. These reduced voltage soft starters are the most compact, multi-functional, easy-to-install products on the market. Their superiority begins with the control package, which features 24 Vdc control, onboard Digital Signal Processor (DSP), and use of a low impedance run contactor, all of which contribute to the *IT* soft starter's safety, advanced functionality and compact size.

Features

The Freedom series starters are available in either fusible or circuit breaker types utilizing Type 3R rainproof and sleet resistant enclosures. Convenient straight-through wiring with top line connections and bottom load connections features easily accessible pressure connections for line, load and control. Starter and disconnect are factory wired.

- **Motor Circuit Switch**—Long life, heavy-duty, quick acting, double break action. Positive ON and positive OFF available in either fusible or non-fusible versions. Fuse clip kits are available for field installation and can be converted in the field for maximum job flexibility
- **Motor Circuit Protector**—Similar to a magnetic trip only circuit breaker. Features an adjustable magnetic trip characteristic for accurate, dependable fault protection and simultaneous trip of all poles to prevent single phasing
- **Overload Relay**—Freedom overload relays with trip indication feature bimetallic type operation with ambient compensation and a choice of either manual or automatic reset
C440 electronic overload relays are available up to 100A as a self-powered, self-contained unit.
With external CTs, C440 can protect motor up to 1500 FLA. Available add-on accessories include remote reset capability and communication modules with I/O for DeviceNet, PROFIBUS, and Modbus.
- **HAND/OFF/AUTO Selector Switch and START Pushbutton**—10250T heavy-duty units mounted on the flange of the enclosure for outside accessibility
- **RESET Button**—Accessible from front of enclosure (booted for environmental protection) for operation of overload relay reset function

- **Enclosure**—Type 3R rainproof and sleet resistant construction with stainless steel door latches and special corrosion resistant paint. Enclosure features include grounding lugs, padlocking feature on door latch, drip hood over door and provisions for top mounting conduit hubs. Most enclosures include generous panel space for mounting optional control and accessories
- **Mounting**—Pole mounting feet with keyhole slots for easy mounting are standard on enclosures for Sizes 1–5 (removable for Sizes 1–5 standard width flange type enclosures). Brackets can be formed to the contour of the pole after mounting
- **Padlocking**—Provision on door latch for locking door closed, as well as provision for padlocking disconnect switch in OFF position. With a simple modification, disconnect can also be padlocked in ON position
- **UL Listed**—Underwriters Laboratories Inc. includes the “Suitable for Use as Service Equipment” label

Interrupting Ratings

- **Fusible**—Sizes 1–5 suitable for use on a circuit capable of delivering not more than 100,000 rms symmetrical amperes. 600V maximum where a Class R fuse clip kit is properly installed and Class R fuses are used. If Class R fuses are not used, the switch should not be installed on circuits capable of delivering more than 10,000 rms symmetrical amperes. Size 6 is limited to 18,000 and Size 7 is limited to 30,000 rms symmetrical amperes
- **Circuit Breaker**—Sizes 1–3 controllers are suitable for use on circuits capable of delivering not more than 100,000 rms symmetrical amperes at 480V maximum; for 600V applications not more than 65,000 rms symmetrical amperes
- **ECP Irrigation Pump Panel**—Suitable for use on circuits capable of delivering not more than 10,000 rms symmetrical amperes at 480V maximum

Optional Features

- **Backspin Timer**—0.2 seconds to 3 minutes. Prevents restart until motor and pump have stopped
- **Program Timer**—24 hour, 7 day with day omission
- **Control Transformer**—Available as standard, either as a field kit or factory installed. Includes two primary and one secondary fuses
- **Electrical Interlocks**—Side mounted in NO, NC and NO-NC. Maximum of two contacts on either side of starter through Size 2, maximum of three per side Sizes 3–5
- **Control Circuit Fuse Kit**—30A, 600V rating
- **Lightning Arrestor**—Offers protection to control from lightning induced surges
- **“R” Fuse Clip Kits**—30–200A, 250V and 600V ratings
- **Disconnect Control Circuit Interlock**—To disconnect separate control circuits

- **Enclosure Conduit Hubs**—Hole provided in enclosure top covered with hole closer. Will accept 3/4 in, 1-1/4 in, 1-1/2 in, 2 in, 2-1/2 in, and three inch conduit sizes
- **Pad Mounting Feet**—For standard width enclosures Sizes 1–5
- **Electronic Overload (SSOL)**
- **304-Grade Stainless Steel Enclosure**—For additional corrosion resistance, any of the pump panels can be ordered as 304-Grade stainless steel, still keeping the Type 3R rating
- **Soft Starter Pump Control Options**
 - Designed to reduce “water-hammer” during start-up and stopping sequences
 - Stop ramp extended to 60 seconds to help control larger motors and systems with long piping runs

Standards and Certifications

Note: See **Tab 17** for additional information on standards and certifications that apply to all enclosed control products.

- UL Listed
- cUL Listed (indicates appropriate CSA Standard investigation)
- ABS Type Approved
- OSHPD Certified (OSP-0015-10)

Freedom—Fusible Disconnect

Product Description

- Three-phase magnetic
- Interchangeable heater OLR

Standard ECN54 controllers have a HAND/OFF/AUTO selector switch and START and RESET pushbuttons mounted on the enclosure and are wired as illustrated on **Page V10-T6-8**.

Type 3R enclosure does not include top conduit hubs. Hubs are available in kit form—see **Page V10-T6-5**.

If branch circuit protective device is 45A or greater, C320FBR1 fuse kit (panel mounted) may be required for control circuit protection per NEC 430-72.

Stainless steel enclosure may be ordered by changing the seventh digit to **A**. Type 3R rating will still apply.

Typical Wiring Diagram

Freedom—Circuit Breaker

Product Description

- Three-phase magnetic
- Interchangeable heater OLR

These ECN55 pump controllers feature the Freedom line starters. They have a HAND/OFF/AUTO selector switch and START pushbutton mounted on the

enclosure and a RESET button on the front—wiring is as illustrated in the wiring diagram on **Page V10-T6-8**.

Type 3R enclosure does not include top conduit hubs. Hubs are available in kit form—see table on **Page V10-T6-5**.

If branch circuit protective device is 45A or greater, C320FBR1 fuse kit (panel mounted) may be required for control circuit protection per NEC 430-72.

Stainless steel enclosure may be ordered by changing the seventh digit to **A**. Type 3R rating will still apply.

Notes

Starters do not include heater packs. Select one carton of three heater packs. For heater pack selection, see **Tab 15**.

^① To order without the START pushbutton, add modification code **P6**.

^② For Compact NEMA Size 1 or Size 4 Pump Panel, add modification code **C60**. (Example: ECN5412AAA-C60).

Compact NEMA Size 1 and Size 4 Starters Electrical Life at Rated Continuous Current

NEMA Size	Rated Current (Amp) AC3/AC4	Operations
1C	27/150	2,500,000/40,000
1	27/153	5,000,000/110,000
4C	135/516	500,000/40,000
4	135/822	800,000/70,000

^③ Supply hp, voltage, FLA and whether motor is design E or not when ordering the starter.

For Other Volts and Hertz Applications

For other than listed volts and hertz, select required controller by catalog number and replace the magnet coil alpha designation, eighth digit in catalog number, with proper code suffix from the table below.

Example: For 600V 60 Hz coil, change ECN5512**C**AC to ECN5512**D**AC.

Coil Voltage

Coil Volts and Hertz	Suffix Code
120/60 or 110/50	A
240/60 or 220/50	B
480/60 or 440/50	C
600/60 or 550/50	D
208/60	E

	3	—	11.0 (279)	39.0 (991)

Note^① Space is between disconnect switch or circuit breaker and starter.

A200—Fusible Disconnect

Product Description

- Three-phase magnetic
- Interchangeable heater OLR

Standard ECN54 controllers have a HAND/OFF/AUTO selector switch and START and RESET pushbuttons mounted on the enclosure and are wired as illustrated on **Page V10-T6-12**.

Type 3R enclosure does not include top conduit hubs. Hubs are available in kit form—see table on **Page V10-T6-5**.

If branch circuit protective device is 45A or greater, C320FBR1 fuse kit (panel mounted) may be required for control circuit protection per NEC 430-72.

Stainless steel enclosure may be ordered by changing the seventh digit to **A**. Type 3R rating will still apply.

600/60 or 550/50	D
208/60	E

Wiring Diagram**Typical Wiring Diagram**

A200—Circuit Breaker

Product Description

- Three-phase magnetic
- Interchangeable heater OLR

These ECN55 pump controllers feature the A200 starters. They have a HAND/OFF/AUTO selector switch and START pushbutton mounted on the enclosure and a RESET button on the front—wiring is as illustrated in the wiring diagram on **Page V10-T6-12**.

Type 3R enclosure does not include top conduit hubs. Hubs are available in kit form—see **Page V10-T6-5**.

If branch circuit protective device is 45A or greater, C320FBR1 fuse kit (panel mounted) may be required for control circuit protection per NEC 430-72.

Stainless steel enclosure may be ordered by changing the seventh digit to **A**. Type 3R rating will still apply.

Irrigation Pump Panel—C440 SSOL

Product Description

Eaton’s irrigation pump controllers are combination starters designed to meet the requirements of the agricultural industry. The enclosure is UL Type 3R rated to provide weathertight protection and is available in two sizes. Irrigation application specific accessories and modifications are available to fit the customer’s requirements.

The irrigation pump panels use Freedom series motor starting technology to control motors up to 100 hp at 460V. These controllers have two styles of overload protection available, interchangeable heater and solid-state overload (SSOL).

Catalog Number Selection	V10-T6-18
Pump Panels—Interchangeable Heater Overload	
Product Selection	V10-T6-19
Pump Panels—Solid-State Overload	
Product Selection	V10-T6-20
Wiring Diagram	V10-T6-22

Features

- The interchangeable heater overload (C306) uses individual heater packs to allow customers the ability to use various heater styles
- The solid-state overload relay (C440) provides enhanced protection and adjustment ranges as compared to bimetallic overload relays. Trip Class 10, 20, and 30 are available, along with a very wide trip current range to make setup very easy

Standards and Certifications

Note: See **Tab 17** for additional information on standards and certifications that apply to all enclosed control products.

6	120–600 ④	R63/H	R64/H

Notes

① Compact NEMA Size 1 or Size 4 Pump Panel, add modification code **C60**. (Example: ECN5412AAA-**C60**).

Compact NEMA Size 1 and Size 4 Starters
Electrical Life at Rated Continuous Current

NEMA Size	Rated Current (Amp) AC3/AC4	Operations
1C	27/150	2,500,000/40,000
1	27/153	5,000,000/110,000
4C	135/516	500,000/40,000
4	135/822	800,000/70,000

② Not UL Listed.

③ NEMA Size 5 starter available with 60–300A panel mounted CTs. Starter as an assembled unit with 1–5A C440 overload relay (C440A1A005SELAX or C440A2A005SELAX).

④ NEMA Size 6 starter available with 120–600A panel mounted CTs. Starter as an assembled unit with 1–5A C440 overload relay (C440A1A005SELAX or C440A2A005SELAX).

Features:

- Self powered
- Phase loss protection
- Current adjustment knob
- ±1% repeat accuracy
- 1NO and 1NC isolated contacts
- Predictive indication
- Enhanced protection and monitoring
- Communication capabilities

Product Description

Eaton’s duplex pump panels are controllers with or without disconnect, and designed to meet the requirement for two alternating pumps in critical installations. All duplex pump panels are provided standard with two three-phase magnetic starters and an automatic alternator to provide equal pump wear. During periods for heavy demand, both pumps will operate.

The enclosure options include UL Type 1, 12, 3R, or 4X.

Standards and Certifications

Note: See **Tab 17** for additional information on standards and certifications that apply to all enclosed control products.

- UL Listed
- cUL Listed (indicates appropriate CSA Standard investigation)
- ABS Type Approved
- OSHPD Certified (OSP-0015-10)

Notes

- ① Use for Sizes 0–3, HMCP 600V applications only.
- ② When control power transformer modification codes (**C1–C11**) are used or when starter class includes CPT (that is, ECN07, 18) see table to the right for system voltage code.

Cover Control

Non-Reversing

Flange Control Kits

For on-the-job conversion of Type 1, 3R, 4X and 12 enclosed starters. Knockouts are provided on the Type 1 flange. Type 3R, 4X and 12 have prepunched holes with removable hole plugs.

Factory Installed Pilot Devices

To order factory installed pilot devices, change the 9th character of the catalog number to the alpha shown in the table below. Example: to order an **ECN0514CAA** with START/STOP pushbuttons and a red pilot light, change the **A** to a **C**, for example, **ECN0514CCA**.

Notes

- ① Type 1, NEMA Sizes 00–4 non-combination ONLY.
 ② Type 1, NEMA Sizes 5–9 non-combination PLUS all Type 3R, 4X, 12 non-combination PLUS all combination—NEMA sizes only.
 ③ Add code letter from the table below to catalog number for voltage—kits only. Example: C400T9**B**.

Rating	Code Letter	Rating	Code Letter	Rating	Code Letter
120V 60 Hz	A	240V 60 Hz	B	480V 60 Hz	C
208V 60 Hz	E	380V 50 Hz	L	600V 60 Hz	D

Non-Combination

Features

- Full voltage non-reversing non-combination
- Three-phase magnetic, three-pole
- Interchangeable heater OLR
- 600V maximum

Alternator

In normal operation, the alternator automatically selects alternate pumps for each succeeding cycle to equalize pump wear. During periods of heavy demand, both pumps will operate.

Notes

Starters do not include heater packs. Select two cartons of three heater packs (two overload relays—one for each motor). For heater pack selection, see **Tab 15**.

① Circuitry arranged for two-pole pilot devices.

② All duplexes come standard with alternator. To remove, add modification code **D12**.

③ The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit. Example: ECN6804AAA. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**. To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

④ All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.

⑤ Requires two starters.

Combination

Features

- Full voltage non-reversing combination
- Three-phase magnetic, three-pole
- Interchangeable heater OLR
- 600V maximum

Alternator

In normal operation, the alternator automatically selects alternate pumps for each succeeding cycle to equalize pump wear. During periods of heavy demand, both pumps will operate.

Notes

Starters do not include heater packs. Select two cartons of three heater packs (two overload relays—one for each motor).

For heater pack selection, see **Tab 15**.

① Circuitry arranged for two-pole pilot devices.

② All duplexes come standard with alternator. To remove, add modification code **D12**.

③ For 200V and 575V motors—starters with 120V coil (for separate control) are available. To order, substitute the letter **A** for the eighth character of the listed catalog number.

④ The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.

Example: ECN6904AAB. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.

To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

⑤ All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.

⑥ Type 12 enclosure is without safety door interlock.

⑦ Requires two starters.

Notes

Starters do not include heater packs. Select two cartons of three heater packs (two overload relays—one for each motor).

For heater pack selection, see **Tab 15**.

① Circuitry arranged for two-pole pilot devices.

② All duplexes come standard with alternator. To remove, add modification code **D12**.

③ For 200V and 575V motors—starters with 120V coil (for separate control) are available. To order, substitute the letter **A** for the eighth character of the listed catalog number.

④ The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.

Example: ECN7004EAC. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.

To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

⑤ All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.

⑥ Type 12 enclosure is without safety door interlock.

⑦ Requires two starters.

HVAC Starters

7.1 Freedom Full Voltage HVAC Starters

Freedom Full Voltage HVAC Starters

7

Product Description

Eaton's ECH line of combination starters was developed specifically for customers in the HVAC industry. The ECH product combines the requirements of motor overload and short-circuit protection into one package. These starters were designed to be compact and to offer the basic features prevalent in the HVAC marketplace. The line includes the Freedom line of FVNR NEMA starters with either (C306) interchangeable heaters or solid-state overload relays, a CPT, HOA and red pilot light.

Features

- Compact design
- Type 1 enclosure
- CPT available
- Bimetal or solid-state overload options
- 30 mm pilot devices
- HOA
- Red RUN pilot
- Disconnect switch or HMCPE
- NEMA Sizes 0–2

Interchangeable Heater Features

C306 overload relays are designed for use with CE or CN non-reversing and reversing contactors. Four sizes are available for overload protection up to 144A.

- Selectable manual or automatic reset operation
- Interchangeable heater packs adjustable $\pm 24\%$ to match motor FLA and calibrated for use with 1.0 and 1.15 service factor motors. Heater packs for 32A overload relay will mount in 75A overload relay—useful in derating applications such as jogging
- Class 10 or 20 heater packs
- Load lugs built into relay base

Page

Motor Control

- Two B600 alarm (NO) and fault (NC) contacts
- Test/Trip button

Motor Protection

- Thermal overload
- Phase loss
- Selectable (ON/OFF) phase unbalance
- Selectable (ON/OFF) ground fault (if selected GF SSOL relay)

User Interface

- Large FLA selection dial
- Trip status indicator
- Operating mode LED
- DIP switch selectable trip class, phase unbalance and ground fault
- Selectable Auto/Manual reset

Feature Options

- Remote reset
- 120 Vac
- 24 Vac
- 24 Vdc
- Tamper-proof cover
- Communications modules

Solid-State Overload Features

- Reliable, accurate, electronic motor protection
- Easy to select, install and maintain
- Flexible, intelligent design

Size/Range

- Broad FLA range (0.33–100A)
- Selectable trip class (10A, 10, 20, 30)
- Direct mounting to NEMA contactors
- Most compact electronic overload in its class

Standards and Certifications

Note: See **Tab 17** for additional information on standards and certifications that apply to all enclosed control products.

- UL Listed
- cUL Listed (indicates appropriate CSA Standard investigation)
- ABS Type Approved
- OSHPD Certified (OSP-0015-10)

Notes

- ① A “—” denotes catalog numbers are incomplete without the magnetic circuit protector code. To complete the catalog number, select the appropriate code from the following table:

Rating	Magnetic Circuit Protector Code	Rating	Magnetic Circuit Protector Code
—	A	30A	E
3A	B	50A	F
7A	C	100A	G
15A	D		

- ② If the solid-state overload option is selected, refer to Publication Number TD03408001E, Relay for MCCs and Enclosed Control Technical Data, for component selection.

Product Description

- Three-phase magnetic
- Three-pole full voltage
- Non-reversing and reversing
- 600 and 1500 Vac maximum
- Starters with interchangeable heater OLR

Application Description

Eaton's vacuum contactors are designed for starting and controlling three-phase, 50/60 Hz, AC motors. Motor full load current should not exceed the contactor current rating. These contactors are built in several versions—the nameplate on a specific contactor states the authorized ratings.

Low voltage vacuum contactors can be applied to a wide range of voltages up to 1500V. These applications include full voltage control of three-phase squirrel cage motors, primary control of low voltage wound rotor motors and circuit switching for low voltage capacitors for power factor improvement.

Operation

The contact structures of these vacuum break contactors are located inside sealed ceramic tubes that have been evacuated of air. Any arc occurring across the contacts upon opening is automatically extinguished because ionized air is not available to sustain it—the arc breaks when the current passes through zero. The arc typically does not survive beyond the first half cycle once the contacts begin to separate. The large arc chutes normally associated with starters of this size are not required. The ceramic tube with the moving and stationary contacts enclosed is called a **vacuum interrupter** or a **bottle**, and there is one bottle for each pole of the contactor. A metal bellows (like a small, circular accordion) within the bottle allows the moving contact to be closed and pulled open from the outside without leaking air into the bottle. Both the bellows and the metal-to-ceramic seals of these state-of-the-art bottles have been refined to the point where the possibility of loss of vacuum has been virtually eliminated.

Contact Force and Altitude

A vacuum contactor is affected by atmospheric pressure on the bellows of the vacuum bottles. Up to an altitude of 6600 ft, the contactor is designed to tolerate normal variations in barometric pressure. If the contactor is to be operated above 6600 ft above sea level, consult Eaton.

Features and Benefits

- Rugged, compact, lightweight
- Quiet operation
- Front removable coil and auxiliaries
- Electrical and mechanical interlocking capability
- Low chop interrupters eliminate the need for surge suppressors
- Contact wear indication allows for planned maintenance program
- Long service life
- Manual push-to-reset button on Sizes 5 and 6
- Freedom overload
- SSOL

Standards and Certifications

Note: See **Tab 17** for additional information on standards and certifications that apply to all enclosed control products.

- UL Listed
- cUL Listed (indicates appropriate CSA Standard investigation)
- CE Mark available
- ABS Type Approved
- OSHPD Certified (OSP-0015-10)

Notes

Starters do not include heater packs. Select one carton of three heater packs. For heater pack selection, see **Tab 15**.

Starters with electronic overload, see modification codes in **Tab 15**.

^① The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.

Example: ECV0744EAA. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.

To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.

^② All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.

^③ Alternate catalog numbers for those listed can be found in the table on **Page V10-T8-4**.

	575				ECV2461DAM	ECV2462DAM	ECV2464DAM	ECV2468DAM	

Notes

Starters do not include heater packs. Select one carton of three heater packs. For heater pack selection, see **Tab 15**.

Starters with electronic overload, see modification codes in **Tab 15**.

- ① The catalog numbers listed in the Type 4X column are for Type 4X 304-Grade stainless steel, as indicated by the **seventh** digit.
Example: ECV2444EAH. To order Type 4X 316-Grade stainless steel, change that digit to **9**. To order Type 4 painted steel, change that digit to **3**.
To order non-metallic, change that digit to **5**. For details on these alternate enclosures, see **Tab 13**.
- ② All Type 12 enclosures are standardized with external reset. For internal reset, order modification code **R5**.
- ③ Type 12 enclosure is without safety door interlock. When safety door interlock is required, add modification code **E11**.
- ④ Alternate catalog numbers for those listed can be found in the table on **Page V10-T8-4**.

NEMA Cast Aluminum Enclosed Starters

9

Product Description

Eaton's combination and non-combination hazardous location cast aluminum motor starters are used in areas where hazardous materials are handled or stored. These units provide disconnecting means, under voltage protection, circuit protection and motor running protection.

Features

- 65,000 AI cUL classified—highest interrupt rated enclosure in the industry
- Copper-free cast aluminum
- Precision machine flame path between box and cover
- Bolt-on slotted mounting feet
- Stainless steel block hinges
- Stainless steel, captive quad-lead cover bolts (disengaged in 1-1/2 turns)
- External stainless steel breaker operating handle
- Breaker and operator shafts are stainless steel
- Ground lug package and installation instructions for termination of ground wire enclosed
- Four point control terminal block, NEMA 1B with wire markers
- Breaker operators can be locked in the ON or OFF position (combination starters only)
- Four plugged 3/4 in NPSM outlets drilled and tapped for control devices
- Standard outlets top and bottom
- Plugged 1/2 in outlets top and bottom for breather/drain
- Components are mounted on a galvanized steel removable pan
- O-ring gasket ensures watertight integrity

Standard Materials

- Bodies and covers: copper-free aluminum
- Cover bolts: stainless steel
- O-ring: neoprene
- Hinges: stainless steel

Finishes

- Bodies and covers: corrosion resistant grey epoxy power coat inside and outside standard to provide Type 4X

Standards and Certifications

Note: See **Tab 17** for additional information on standards and certifications that apply to all enclosed control products.

- UL Classified—Standard 886 File #104565
 - Class I, Groups B, C and D
 - Class II, Groups E, F and G
 - Class III
 - Type 4, 4X, 7 and 9
 - Zone 1, IIB + H2
- CSA Certified—Standard C22.2 File #28361
 - Class I, Groups B, C and D
 - Class II, Groups E, F and G
 - Class III
 - Type 4, 4X, 7 and 9
 - Zone 1, IIB + H2

Code Definitions

Class I locations require the type of explosion-proof electrical equipment where, in case of explosion, the hazardous flames would be contained. In Class II or III locations, dust, fibers and flyings are the combustible materials and it is only necessary to keep these materials out of the electrical equipment (where an arc may take place) and to maintain safe external temperatures.

A brief explanation of the three classifications covering hazardous locations follows:

Class I Locations—are those in which flammable gases or vapors are, or may be, present in the air in quantities sufficient to produce explosive or ignitable mixtures.

Class I, Div. 1—are those where such hazardous concentrations of flammable liquids or vapors exist under normal operating conditions.

Class I, Div. 2—are those where such hazardous concentrations of flammable liquids or vapors are handled in closed containers or closed systems.

Class II Locations—are those where the presence of combustible dust presents a fire or explosion hazard.

Class II, Div. 1—are those where dust is suspended in the air under normal operating conditions, in quantities sufficient to produce explosive or ignitable mixtures.

Class II, Div. 2—are those where such dust is not normally in the air, but where deposits of it accumulating on the electrical equipment will interfere with safe dissipation of heat, causing a fire hazard.

Class III Locations—are those where easily ignitable fibers or flyings are present but not likely to be suspended in the air in quantities sufficient to produce ignitable mixtures.

Class III, Div. 1—are those where ignitable fibers or materials producing combustible flyings are handled, manufactured or used.

Class III, Div. 2—are those where easily ignitable fibers are stored or handled (except in process or manufacture).

Further refinement created for the purpose of testing and approving electrical equipment divides Class I into four separate designations: A, B, C, D and Class II into three separate designations; E, F and G. Underwriters Laboratories test and approve electrical equipment for the following specific groups:

Class I, Group A—atmospheres containing acetylene.

Class I, Group B—atmospheres containing hydrogen, gases and vapors of equivalent hazard such as manufactured gas.

Class I, Group C—atmospheres containing ethyl-ether vapors, ethylene or cyclopropane.

Class I, Group D—atmospheres containing gasoline, hexane, naphtha, benzene, butane, propane, alcohol, acetone, benzol, lacquer solvent vapors or natural gas.

Class II, Group E—atmospheres containing metal dust, including aluminum, magnesium and their commercial alloys, and other metals of similarly hazardous characteristics.

Class II, Group F—atmospheres containing carbon black, coal or coke dust.

Class II, Group G—atmospheres containing flour, starch or grain dusts.

E = 208/60 Freedom; 200/60 <i>IT</i> .
Q = 24 Vdc ^④
L = 380V/50 Hz

Notes

- ① For soft starter information see Tab 5.
- ② *IT*: If CPT is selected, power supply to be 120V–24 Vdc.
- ③ Freedom: When control power transformer modification codes (C1–C11) are used or when starter class includes CPT (that is, ECN07, 24) see table below for system voltage code.

Code	Primary	Secondary
B	240/480–220/440 wired for 240V	120/60–110/50
C	240/480–220/440 wired for 480V	120/60–110/50
D	600/60–550/50	120/60–110/50
E	208/60	120/60

④ Power supply omitted.

⑤ Use for Sizes 0–3, HMCP 600V applications only.

Cover Control

To order factory installed pilot devices, change the ninth character of the catalog number to the alpha shown in the table below.

Example: to order an **ECN0516CAA** with START/STOP pushbuttons and a red pilot light, change the **A** to a **C**, that is, **ECN0516CCA**.

Cover Control

Notes

Starters do not include heater packs. Select one carton of three heater packs. For heater pack selection, see **Tab 15**.

Starters with electronic overload, see modification codes in **Tab 15**.

^① For other control power transformer primary and/or secondary voltage options, see **Tab 2**.

Other Hazardous Location Control

Product Description

Besides Freedom starters, Eaton offers Type 7/9 cast aluminum enclosures for solid-state reduced voltage starters and lighting contactors.

Freedom Starters

For information on hazardous location versions, please consult your Eaton representative.

Solid-State Reduced Voltage Starters

Type 7/9 versions are listed in **Tab 5**.

The **IT** soft starters are designed to be the smallest, most compact soft starters on the market today. The built-in overload (ranges from 0.25 to 1000A) and run bypass contactor (greatly reducing the amount of heat generated) make installation and setup quick and easy.

With this small size and low heat dissipation it can easily fit in the place of existing soft starters, Wye-Delta starters or across-the-line starters where others cannot. To make the retrofit more flexible, we also offer soft starters as open components or as a completed kit on a back panel for easy and quick installation into your existing enclosure.

Lighting Contactors

Type 7/9 versions are listed in **Tab 4**.

Product Description

Eaton's Multi-Pak group control provides a convenient and economical method of grouping a number of starters and/or control devices. They are an effective solution for applications where the quantity of equipment required or the floor space available does not permit application of control centers or the use of individual starters. The result is a lower field installation cost and a less cluttered appearance. The Multi-Pak is ideally suited for wall mount installations, requiring only 32 in L x 26 in H space for four compartments or 48 in L x 26 in H for six compartments. Combinations of 4, 6, 8, 10, 12, 14, and so on, compartments can be easily made. Multi-Pak is available in module form or can be completely factory assembled.

Application Description

Multi-Pak starters are designed to save time, space and expense in installing motor control devices—whether for residential, commercial or industrial buildings. The modular assembly allows versatile, on-the-job arrangement of Sizes 1–4 combination starters with ambient compensated relays, incoming or feeder circuit breakers or fusible disconnect switches, pushbuttons, control transformers, timers, relays and fuses. The enclosures and separate, prewired modules are field-stocked and can be ordered individually, permitting field tailoring to suit the application.

Features

Enclosures

The Type 1 enclosures are partitioned into either four or six compartments to hold combination starter modules, incoming or feeder circuit breakers, fusible switches or other auxiliary devices. The barriers can be removed to provide oversized spaces. Each enclosure holds up to four Size 1 or 2 full voltage, non-reversing combination starter modules; up to two Size 3 or 4 starter modules or a combination of both size ranges.

The compartments have hinged doors interlocked to prevent opening when the breaker switch is in the ON position. The disconnect operating mechanism can be padlocked in the OFF position.

In addition to the barriered compartments, the enclosure contains two wiring troughs. The top section is a wireway fitted with three power terminal straps, each having terminals for extension to adjoining enclosures and to all four compartments. The

incoming line and extension terminals are suitable for either copper or aluminum conductors from No. 6 to 350 kcmil. At the bottom of the enclosure is another wiring trough for interconnecting wiring and outgoing cables.

The Multi-Pak enclosure adapts easily to installation requirements. Multiple units can be arranged to suit the space available—horizontally on a single line or two-high. Knockouts are provided at the top, bottom and sides of the enclosures for conduit connection. Conduit can be installed and cables pulled as dictated by the construction schedule. Combination starter modules and incoming or feeder devices can be installed days, months or years later.

Hinged front doors provide easy access to each module. The doors are gasketed with fire retardant material. Knockouts on the doors provide pushbuttons and indicating light mountings.

Combination Starter Modules

Starter modules consist of an A200 magnetic linestarter prewired with a motor circuit protector or a fusible DS disconnect switch on a panel. Full voltage non-reversing and reversing combination starters are available. An external RESET button is mounted on the starter module door. With its versatile modular design, the Multi-Pak starter permits a variety of motor control groupings. One module can contain many different arrangements of devices such as combination linestarters with control transformers, and/or relays, two-feeder circuit breakers or fusible switches.

Feeder Modules

Like combination starter modules, breaker/switch modules are factory assembled on a formed steel panel. They are shipped complete with a door for field mounting. The module and door for feeder breakers through 100A or 30A and 60A fusible switches are normally furnished with a single breaker or switch in the top position with provisions for field mounting a second device in the lower position. A kit contains the operator, spacers, insulation and necessary hardware for adding a second device. Feeder modules for higher ratings are single units only.

Standards and
Certifications

Note: See **Tab 17** for additional information on standards and certifications that apply to all enclosed control products.

Heater Selection

The full load current shown on each motor nameplate should be checked with the heater application tables to assure that the heaters chosen with each starter unit agree with this table and with the actual motor protection requirements. Do not rely on code marking on the heater to indicate current rating. In making this check, the following Notes 1–3 regarding special conditions should be considered.

Notes on Overload Heater Application

1. The heater application tables provide 115–125% protection for motors rated 40°C having a service factor of 1.15 and 1.25.
2. Use one smaller heater when:
 - a. The motor is rated 50° or 55°C.
 - b. The motor has a service factor of 1.00.
 - c. A maximum of 115 protection is desired.
3. Overload relays are ambient compensated, therefore base heater selection on motor current, and disregard ambient temperature differences.

The relay will provide protection against abnormal load conditions to current values exceeding normal locked rotor current. The relay should be protected against short-circuits by providing branch circuit protection per National Electric Code, but not to exceed the maximum fuse ratings listed in the heater tables.

Note: To provide continued protection against fire and shock hazard, the complete overload relay must be replaced if burn out of the current element occurs.

10.1 Multi-Pak Group Control

Modules and Enclosures

Dimensions

Approximate Dimensions in Inches (mm)

Dimension and Wiring Arrangements

Type 1 enclosures are 32 or 48 in (813 or 1219 mm) wide, 26 in (660 mm) high and 7 in (178 mm) deep, with provisions for four-bolt wall mounting. Enclosures may be grouped together by nipping through the knockouts provided.

Load and control conduits may enter at the top or bottom. Instructions for overload heater installation are attached to each starter door.

Dust and weather resistant enclosures for four- or six-module units are available. These enclosures are 34 or 50 in (864 or 1270 mm) wide, 31 in (787 mm) high and 11.75 in (298 mm) deep.

Approximate Dimensions and Wiring Arrangements, Four Module Unit

Note

Six-module units are 48 in wide.

MS Series

Product Description

- Eaton's MS motor starter is a compact, versatile unit featuring heavy sliding contacts as well as "quick-make" and "quick-break" mechanism
- Standard with large pressure type terminals, straight-through wiring and a trip-free handle mechanism
- The "plug-in" heater element is keyed to ensure proper positioning and an adjustable knob allows a setting of plus or minus ten percent of the nominal heater rating

Application Description

The MS manual motor starter provides manual control and overload protection to single-phase motors. By utilizing the interchangeable heater elements, the starter can protect motors ranging from 0.40A up to 16.0A. Ideal for HVAC applications.

Features

- Compact size
- Trip-free handle mechanism
- Keyed heater elements to ensure proper installation
- Starters available with red pilot light
- The operating handle of the enclosed units can be locked in the OFF position
- Enclosures are offered in Type 1, 3, 4 and 5
- Hazardous locations cast aluminum enclosures are available rated for Type 7, Class I, Group D (vapors) and Type 9, Class II, Groups E, F and G (dust)

11

Type B100

Product Description

Eaton's B100 manual motor starters can be used in single-phase applications rated 3 hp at 240 Vac or 2 hp at 230 Vdc. The starter can also be rated for three-phase applications up to 10 hp at 600 Vac.

There are two methods of operation for the B100 manual starter. It can be ordered with a toggle switch operator or a START/STOP pushbutton operator.

Application Description

The B100 family of manual motor starters provides manual control, as well as overload protection, to both single-phase and three-phase motors. The starter protects motors up to 38.9A single-phase and 26.8A three-phase with the appropriate heater selection.

Features

- Includes three-pole bimetallic overload relay
- Straight-through wiring
- Field mounted auxiliary contacts
- Available in Type 1, 4, 7, 9 and 12 enclosures with toggle operation (Type 1 enclosure for pushbutton operator)
- Standard with a lockout device to lock motor in the OFF position

Instructional Leaflet

IL14890

Standards and Certifications

Note: See **Tab 17** for additional information on standards and certifications that apply to all enclosed control products.

- UL File No. E19222, Category NLRV (for motor controller)
- CSA File No. LR39402-6, Class 3211-05 (open starters)
- CSA File No. LR54517-1, Class 3211-05 (closed starters)
- ABS Type Approved
- OSHPD Certified (OSP-0015-10)

Product Selection

When Ordering Specify

- Catalog number of starter with application modifications
- Heater pack selection—a three-phase starter requires three heaters, and a single-phase starter requires two heaters
- Any required accessories

Notes

① Single-phase starters require two overload heaters.

② Three-phase starters require three overload heaters.

FH series heaters are for type B100 manual motor starters. Heater element selection is based on motor nameplate's listed full load amperes.

Trip rating of this series of elements is 125% of minimum motor full load amperes listed for the element.

When motor and overload relay are in the same ambient and the service factor of the motor is 1.15 to 1.25, select heaters from the heater selection table.

If the service factor is 1.0 or less (including zero), or a maximum of 115% protection is desired, select a heater one size smaller than indicated for the amperage range required.

EMS Panels

Product Selection V10-T12-3

Product Description

Safety is a top priority in many manufacturing plants. Existing equipment used in manufacturing applications may not have the necessary hardware that minimizes risks associated with operation and maintenance.

The EMS panel provides a simple solution to enhance the safety of existing equipment, minimizing risk to operators and increasing overall safety of the equipment.

Application Description

Most smaller equipment and older equipment are operated by a maintained ON/OFF control switch. A power loss when the control switch in the ON position could result in unprepared or unintended operation when the power is restored. This could put operators at risk.

Additionally, most older or smaller equipment do not include an emergency stop operator, which provides a means to more easily stop the machine operation in the event of an emergency.

Machinery should also be equipped with a disconnect means that can be padlocked in the OFF position during maintenance activities. This prevents operation of the panel while the equipment is being serviced.

The EMS panel is designed to be retrofitted to existing equipment.

Features and Benefits

The EMS panel consists of

- Small control panel
- Pushbutton control station with a whip
- Disconnect means with lock-out capability (provided on primary control panel)
- Motor overload protection (to protect the motor from damage due to overuse or excess heat)
- A pushbutton control station with a four foot whip for easy installation at a location appropriate for the operator's control
 - Pushbutton control station includes a momentary start button (requires equipment to be restarted should a power loss occur)
 - Stop button for normal stopping of the equipment during operation
 - Emergency stop with bold red and yellow colors that is larger than the start/stop operator (allows for increased visibility and access should an emergency occur)

Standards and Certifications

The panel is rated UL508A, and includes a self-protected, combination motor controller.

Additional short-circuit protection (such as fuses or a breaker) is not required.

- UL rated

**Need a Similar but More Custom Solution?**

Eaton's Control Panel Flex Center can help by designing a specific solution for your needs. For these requests, please contact the Control Panel Flex Center at 216-265-3291.

Product Selection

To select an EMS panel, chose the catalog number from the column of the appropriate circuit voltage and the row with the operational current of the

equipment. The equipment voltage and current is typically found on the equipment electrical label or in the equipment manual.

Note: 480V and 600V EMS panels include a control power transformer that steps down the control voltage to 120 Vac.

Enclosure Options

Overview

Eaton's packaged control line offers a full line of enclosure options. Application and environmental requirements can change from location to location, therefore so do the enclosure sizes and types. This section of the catalog discusses some of the capabilities of the packaged control line. For other applications or enclosure options, refer to the product specific sections of this catalog or contact your local distributor.

Non-Metallic Enclosures

Eaton's packaged control product line offers a full line of nonmetallic enclosures for your application needs. This includes the NEMA, lighting, soft starter and custom product lines.

Features

- Designed to meet UL, CSA and CE standards for enclosures
- Type 4X enclosure rating
- Opaque and transparent covers available in most styles
- Available with gasketed tops
- Available with hinged cover options
- Suitable for use in indoor and outdoor applications

316 Stainless Steel Enclosures	V10-T13-3
Type 3R Stainless Steel Enclosures	V10-T13-3
Type 7/9 Explosion Proof Enclosures	V10-T13-3
Paint Options	V10-T13-3
OEM Panel Solutions	V10-T13-4
Catalog Number Selection	V10-T13-4

Options

- Types of covers: screw-on or hinged
- Transparent or opaque covers in most versions
- DIN rail mounting or panel mounting
- Additional holes/knockouts can be added for easy installation
- Cover control
- Oversized enclosures
- Type 1, 12 and 3R versions

For ordering this option, change the 7th digit in the catalog number to a **5** (that is, ECN222**1**AAF becomes ECN222**5**AAF).

316 Stainless Steel Enclosures

Many people believe that stainless steel is not susceptible to corrosion. While stainless steel greatly improves corrosion resistance, it is still potentially susceptible to corrosion. Certain chemicals, salts, chlorides and acid can corrode stainless steel. Corrosion resistance varies among the different grades of stainless steel due to the chemical composition of the individual grade and is the result of the formation of an oxide film on the surface of the metal. This film can be damaged when used in harsh environments containing chlorides, chemicals and salts, which attack the film and lead to some types of corrosion.

There are many forms of corrosion beyond that of well-known rust. Other common forms of corrosion that may come into play at customer installations include galvanic or two-metal corrosion and pitting corrosion. Galvanic corrosion occurs when two dissimilar metals are placed in contact or are electrically connected. A potential difference produces electron flow between the metals that results in increased corrosion of the less corrosion-resistant metal and a decrease in corrosion of the more

resistant material than would occur if the metals were not in contact. Pitting is typically in the form of localized attack that creates holes in the metal. These holes may be very small and difficult to detect due to accompanying rust. 304-Grade stainless steel is susceptible to this form of corrosion in certain atmospheres.

Fortunately, there are options available for applications where 304-Grade stainless steel is susceptible to corrosion. Enclosures manufactured with 316-Grade stainless steel offer even better corrosion resistance to most chemicals, salts and acids and are better suited for installation in marine atmospheres. In marine atmospheres, 304-Grade stainless steel may develop staining with patches of yellowish-brown film. 316-Grade stainless steel yields improved pitting corrosion resistance versus other grades of stainless (for example, 304-Grade) where brines, highway de-icing salts or chlorides are present.

For ordering this option, change the 7th digit in the catalog number to a **9** (that is, ECN222**1**AAF becomes ECN222**9**AAF).

Type 3R Stainless Steel Enclosures

Often, customers are looking for enclosures to install outdoors where they will be exposed to harsh environmental conditions including salt, acid rain, chemical run offs and mist. In these applications, the unit will not be exposed to high-pressure wash downs. Therefore, the customer does not need a fully rated Type 4 enclosure, but rather a product with a higher resistance to corrosion than standard carbon steel. This product design meets the customers' needs.

Pump panel applications will be the primary use for the Type 3R stainless steel option. It offers customers the opportunity to replace their carbon steel Type 3R enclosures with a stainless steel unit that will help resist rusting. For pump panels (ECN54/55, ECT54/55 and ECP54/55), this option is especially attractive.

For ordering this option, change the 7th digit in the catalog number to an **A** (that is, ECN222**1**AAF becomes ECN222**A**AAF).

Type 7/9 Explosion Proof Enclosures

Some applications are exposed to areas in which hazardous materials are handled or stored. These environments require explosion proof enclosures.

Class I locations require the type of explosion-proof electrical equipment where, in case of explosion, the hazardous flames would be contained. In Class II or III locations, dust, fibers and flyings are the combustible materials and it is only necessary to keep these materials out of the electrical equipment (where an arc may take place) and to maintain safe external temperatures.

Further refinement created for the purpose of testing and approving electrical equipment divides Class I into four separate designations: A, B, C, D and Class II into three separate designations; E, F and G. Underwriters Laboratories test and approve electrical equipment for the specific groups.

For more descriptions on code and class definitions, see **Tab 9**.

For ordering this option, change the 7th digit in the catalog number to a **6** for bolted design, and **7** for threaded design. (that is, ECN222**1**AAF becomes ECN222**7**AAF).

Paint Options

With a full line paint shop, we can offer custom solutions for our customers. In many cases this includes custom colors for your panels. This helps in establishing brand identity for our OEM customers and differentiates them from their competition.

13.1

Alternate Enclosures

Enclosure Options

OEM Panel Solutions

With one of the largest steel fabrication shops available, we are able to quickly design a custom enclosure for your company's particular needs. Also, with our own custom paint facilities, we can customize the look and feel of your control panels to meet your corporate image.

With our large staff of professional engineers, we are able to quickly and efficiently design your panels for you, using the latest technologies.

Our abilities include:

- AutoCAD
- Mechanical Desktop/Inventor
- Mechanical Engineering
- Electrical Engineering
- UL Test Certification
- Short-Circuit/Thermal Testing
- Prototyping

Due to our focus on control panels, we have become highly efficient and strive to exceed our customer expectations on performance, quality and delivery.

Eaton can offer the OEM a wide range of solutions for your control and production needs, including:

- Agency testing and certifications
- Flexible ordering schedules and volumes
- Wide range of options for value selling by the OEM
- Fast prototyping
- Just-in-time delivery
- Drop-in technology for their systems
- On-site inspections

Notes

All Type 7 and 9, see **Tab 9**.

① Enclosure space will also accommodate for an **IT** Power Supply, 2 four-pole relays, CPT, and terminal blocks. Also includes space for a DNA module or MOV.

② Contact Eaton for box dimensions not shown on **Pages V10-T14-13 to V10-T14-31**.

③ Same as footnote ①, but CPT is not included. Upsize to B1 enclosure to include space for a CPT and a full voltage bypass contactor.

Freedom NEMA**Auxiliary Contacts****NEMA Sizes 00–2**

The auxiliary contacts listed below are designed for installation on Freedom Series starters and contactors. Snap-on design facilitates quick, easy installation.

These bifurcated design contact blocks, featuring silver cadmium alloy contacts, are well suited for use in very low energy (logic level) circuits.

Notes

NCI = Normally Closed early opening designed for use in reversing applications. EC = Early Closing. LO = Late Opening.

^① For reference only—not part of catalog number. See **Page V10-T15-3**.

Contact Configuration Code

This two-digit code is found on the auxiliary contact to assist in identifying the specific contact configuration.

The first digit indicates the quantity of NO contacts and the second indicates the quantity of NC contacts.

Heater Pack Selection

Heater packs H2001B to H2017B and H2101B to H2117B are to be used only with Series B overload relays Catalog Numbers C306DN3B (Part No. 10-7016) and C306GN3B (Part No. 10-7020). The load lugs are built into the overload relay base to allow load wiring prior to heater pack installation. The

previous heater design had integral load lugs. The Series B heater packs are electrically equivalent to the previous heater design. Heaters H2018-3 to H2024-3 have not changed.

Note: The series of a starter is the last digit of the listed catalog number. Example: AN16DN0A**B**.

Notes

① Heater packs are shipped three to a carton. Catalog numbers are for three heater packs.

② Sizes 5–8 use the 32A overload relay with current transformers.

DC Magnet Coils

When Ordering Specify

Conversion Kit for Field Assembly

- Catalog number

Factory Installed DC Coil

- For factory installed DC magnet coil on AC contactors or non-combination starters (open type only), substitute the code suffix from table below for the magnet coil identifier in the device catalog number.

Example: For Size 0 AC contactor with a 24 Vdc coil, change CN15BN3AC to CN15BN3T1C

Application

- Connect for separate control
- Not for use with cover control switch operators
- Use twin break, heavy-duty pilot devices
- Designed for +10%, -20% rated voltage, continuous duty operation

Non-Reversing Kit Consists of:

- One encapsulated DC magnet coil
 - One NCI or NO/NCI side-mounted auxiliary contact
- Note:** These kits are supplied with a NO/NCI side-mounted auxiliary contact in place of the NCI contact.
- Two blue colored connection wires
 - One instruction publication

Operation

These DC coil kits have separate pickup and seal windings. A **special** (side-mounted) early-break NCI auxiliary contact is used to either disconnect the pickup winding or insert the seal winding in series with the pickup winding, depending on the frame size of the contactor. DC coil kits come in two styles, a suffix **1** and a suffix **4**. The 1 suffix contains only the **special** (side-mounted) early break NCI auxiliary contact. The 4 suffix contains a NO contact in the same package as the **special** (side-mounted) early-break NCI auxiliary contact.

Note: NEMA Sizes 00 and 0 contactors may use either suffix 1 or 4 DC coil kits; starters

may use suffix 4 DC coil kits only. For NEMA Sizes 1 and 2, both contactors and starters may use a suffix 4 DC coil kit only.

On the above sizes only, when the **special** auxiliary package is mounted on the side of a contactor or starter, **no** standard auxiliary contact may be mounted on the same side.

Note: For NEMA Sizes 3–5, the special coil NCI clearing contact is an add-on auxiliary (**must** mount on a base mount auxiliary contact; normally a 1NO). This arrangement will normally account for two of the three contact positions on the side of each contactor or starter.

See figure on **Page V10-T15-9**.

Notes

- ① Factory installed DC coils on NEMA contactors and starters include a NO/NC top-mounted auxiliary contact on each contactor for electrical interlocking.
- ② Kit does not include mechanical interlock or crossover wiring. Two NO/NCI top-mounted auxiliary contacts are supplied for electrical interlocking.
- ③ Available factory assembled only.
- ④ 1NO available in suffix 4 kits only.

Remote Reset Module (32A Overload Relay)

The C316RR remote reset module for the C316F, C316S and C316U overload relays allows remote resetting of tripped (32A) overload relays by means of an electrical solenoid attachment that mounts on the side of the overload relay.

Product Selection

Remote Reset Module Operating Voltage	Catalog Number
24V 50/60 Hz	C316RR1U
110V 50/60 Hz	C316RR1A

Dimensions

Approximate Dimensions in Inches (mm)

Note: The operating coil is not suitable for a continuous duty. Recommended impulse duration 0.2–0.35 seconds with 15 operations maximum per hour.

Mechanical Interlock and Reversing Kits

Mechanical interlocks and reversing kits are designed for field assembly of reversing contactors or starters from Freedom Series components. The reversing kits include a mechanical

interlock, stabilizer bar and a pre-cut, trimmed and formed wire set. Auxiliary contacts, if required, must be ordered separately. See **Page V10-T15-2**.

Solid-State Timers**Solid-State ON DELAY Timer—Side-Mounted on Freedom Series NEMA 00–2 and C25D, C25E and C25F Frame**

This timer is designed to be **wired in series with the load** (typically a coil). When the START button is pushed (power applied to timer), the

ON DELAY timing function starts. At the completion of the set timing period, timer and series wired load will both be energized.

Solid-State Timer**Mounted Timer Product Selection**

Timing Range	Catalog Number	^{④⑤⑥}
0.1–1.0 seconds	C320TDN1	—
1–30 seconds	C320TDN30	—
30–300 seconds	C320TDN300	—
5–30 minutes	C320TDN2000	—

Pneumatic Timers—Top-Mounted

Attachment mounts on top of any NEMA Size 00–2 Freedom Series starter or contactor (top-mounted auxiliary contacts can not be installed on device when timer

is used). Timer unit has 1NO–1NC isolated timed contacts—circuits in each pole must be the same polarity. Units are convertible from OFF to ON DELAY or vice-versa.

Pneumatic Timer**Product Selection**

Timing Range	Catalog Number
0.1–30 seconds	C320TP1

Description	Volts AC			
	120	240	480	600
Make	30	15	7.5	6
Break	3	1.5	0.75	0.6

Notes

- ① Without cross-wiring.
- ② For use with latest series product.
- ③ Kit includes two NC auxiliary contacts.
- ④ Add operating voltage suffix to catalog number. **A** = 120V, **B** = 240V, **E** = 208V.
- ⑤ Rated 0.5A pilot duty—not to be used on larger contactors.
- ⑥ Terminal connections are quick connects only. Two per side.

Locking Cover for Overload Relay—C306 Only

Snap-on transparent or opaque plastic panel for covering access port to the overload relay trip setting

dial—helps prevent accidental or unauthorized changes to trip and reset setting.

Locking Cover**Product Selection**

Control Circuit Fuse Block

These panel mounted fuse holders, designed for control circuit protection or other similar low current requirements, have extractor type fuse caps. The Class CC rejection type fuses (KTK-R) used in these holders are intended for use with

equipment designated as being suitable for use on systems having high available fault currents. If branch circuit protective device is 45A or greater, C320FBR fuse kit may be required for control circuit protection per NEC 430-72.

Control Circuit Fuse Block**Product Selection**

Dimensions

Approximate Dimensions in Inches (mm)

Control Circuit Fuse Block**Transient Suppressor Kits****NEMA Sizes 00–2**

These kits limit high voltage transients produced in the control circuit when power is removed from the contactor or starter coil. There are three separate suppressors for use on 24–120V, 208–240V or 277–480V coils respectively.

These devices mount directly to the coil terminals of Freedom Series contactors or starters NEMA Sizes 00–2 and lighting contactors 10–60A. Reversing devices will require two.

Transient Suppressor NEMA Sizes 00–2**Product Selection**

Description	Coil Voltage 50/60 Hz ③	Catalog Number
Transient suppressor	24–120V	C320TS1
	208–240V	C320TS2
	277–480V	C320TS3

NEMA Sizes 3–5

This device mounts on top of any side-mounted auxiliary contact on Freedom Series NEMA Sizes 3–5 and lighting contactors 100–300A. It connects across coil terminals on any 120V contactor or starter magnet

coil (reversing starters or contactors require 2).

Limits high voltage transients produced in the circuit when power is removed from the coil.

Transient Suppressor NEMA Sizes 3–5**Product Selection**

Description	Coil Voltage	Catalog Number
Transient suppressor	120V	C320AS1

Shorting Bar Kits

These kits provide phase-to-phase power connections of contactors for field assembly. The kits include bus

connections and mounting hardware. The shorting bars connect all three phases of a single contactor.

Product Selection

Description	Catalog Number	Description	Catalog Number
NEMA Size 3	C321SB18	NEMA Size 5	C321SB21
NEMA Size 4	C321SB19	NEMA Size 6	C321SB22

Notes

- ① A fuse is not supplied, but holder will accept a Bussman Type KTK or KTK-R (13/32 in x 1-1/2 in) fuse, 600V maximum.
- ② Includes a 5A, 600V KTK-R fuse.
- ③ Suppressor is compatible with coil voltages/ranges as shown, 50 and 60 Hz.

DC/AC Interface Module

The catalog number C320DC Interface Module is an optically isolated solid-state switch which provides a means of operating AC coils with 5–48 Vdc control signal. It acts as a space saving interposing relay which can switch a specified 50/60 Hz AC source to the contactor or starter coil.

Design Characteristics

- DC Input: 5–48 Vdc at mA nominal
- AC operating voltage: 240 Vac (360 VA) $\pm 10\%$ 50/60 Hz
- DC operating voltage: 30 Vdc maximum (0.5A)
- AC current rating
 - 10A make (inrush)
 - 1A break (sealed)

The module may be directly attached to the coil terminals of any Freedom Series contactor or starter—NEMA Sizes 00–3 and lighting contactors 10–100A. It also has provisions for DIN rail mounting.

The module will operate coils within the voltage ranges shown in the table below.

Controller Coil Voltage Ranges

Notes

^① These fuse clips are for Class R fuses.

^② Fuse clip "R" rejection members for use with Class R fuses are supplied loose in the fuse clip kits.

Kits do not include fuses.

Control Power Transformer Kits

These control transformer kits provide a convenient on-the-job addition of control transformers to the following Type 1, 3R, 4/4X and 12 enclosed starters. Adding or changing these kits does not affect the UL listing in most instances.

The transformer kit consists of:

- Control transformer
- Two primary and one secondary fuse
- Wires
- Mounting instruction publication

For Non-Combination Starters

These kits may be used for transformer voltage conversion on Freedom NEMA starters furnished from the factory with control transformers installed. Non-combination starters with CPTs factory installed are Class ECN07, ECA07, ECE07 and ECE11. These kits may also be installed in oversize enclosures that have been designed to accept transformers.

Combination Starters

Most combination starters have space for standard size (and 100 VA extra capacity) control power transformers. The panels are pre-drilled for mounting.

UL/CSA

Type J Auxiliary Contact

- Capable of being field mounted in a contactor or starter (Classes A200, A900 Sizes 00-6, V200, V201 vacuum and definite purpose controllers)
- Provides two separate electrical contact sets which wire vertically and are color coded; black designates NC and silver designates NO. Please note that the vertical wiring is contrary to the horizontal wiring of the L-56 auxiliary contacts
- Designed to fit within dimensions of starter; no additional panel space is required
- Provides circuit isolation (no polarity restrictions) and single break bifurcated contacts

Heater Selection

General Information on Heater Coil Selection

For maximum motor protection and compliance with Article 430-32 of the National Electrical Code, select heater coils from the tables in this section on the basis of motor nameplate full load current.

When the full load current is unknown, selection may be made on the basis of average full load currents. **Caution—The average ratings could be high or low for a specific motor and therefore**

selection on this basis always involves risk. For fully reliable motor protection, select heater coils on the basis of full load current rating as shown on the motor nameplate.

Heater coils are rated to protect 40°C rise motors, and open and drip-proof motors having a **service factor of 1.15** where the motor and the controller are at the same ambient temperature.

For other conditions:

1. For 50°C, 55°C, 75°C rise motors and **enclosed motors having a service factor of 1.0, select one size smaller coil.**
2. Ambient temperature of controller lower than motor by 26°C (47°F), use one size smaller coil.
3. Ambient temperature of controller higher than motor by 26°C (47°F), use one size larger coil.

Ultimate tripping current of heater coils is approximately 1.25 times the minimum current rating listed in the tables.

SS-56 Surge Suppressor

- Designed to be used with magnetic motor controllers through Size 4 in 120V, 60 Hz control circuit applications where electronic equipment is used
- Steady state coil volts: 120, 60 Hz, rms
- Peak input volts: 169.6, 60 Hz, maximum amplitude
- Maximum ambient temperature: 65°C
- Nominal limiting volts: 270 peak
- Nominal rate of volt rise: 0.5 per ms

SS-56 Surge Suppressor**Surge Suppressor** ^①

Type Mounting	Kit Catalog Number
Starter	SS-56

F-56 Fuse Block

- Facilitates installation of fuses (15A, 600V max.) in control circuits
- Utilizes Bussman type KTK fuses, or equivalent
- Mounts in same cavity as Type J auxiliary contact
- No tools or mounting hardware needed
- Fuse not included

Fuse Block

Mounting	Kit Catalog Number
Starter	F56
Panel	F56-P

R-56 Interposing Relay

The R-56AA interposing relay is a low energy solid-state device with a single NO solid-state contact. It can be used as a 120 Vac control relay, and will operate on as little as 40 Vac input. Is useful in

applications requiring long control wiring runs where excessive voltage drop would prevent the contactor or relay from energizing. Will operate a Size 4 contactor from 10,000 ft using 18 AWG wire.

Interposing Relay

Type Mounting	Kit Catalog Number
Starter or panel	R56-AA

Mechanical Interlock

- Prevents closing of one member of a reversing or multi-speed contactor until the opposite member is completely open
- Lever type mechanism assures positive action
- Can be factory assembled or field mounted on A200 and A900 starters and contactors

Mechanical Interlock

Contact Arrangement (Number of Poles, Horizontal or Vertical)	Continuous Size	Interlock Catalog Number
3 x 3 horizontal	0, 1	M-33-1B
4 x 4 horizontal	0, 1	M-33-1B
5 x 3 horizontal	0, 1	M-33-1B
All pole combination, vertical	0, 1	M-34-1A
3 x 3 horizontal reversing	2	M-33-2B
3 x 3 vertical reversing	2	M-34-2A
5 x 3 horizontal	2	M-35-2A
4 x 4 horizontal	2	M-36-2A
All pole combination horizontal	3, 4	M-33-3B
All pole combination vertical	3, 4	M-34-3

B3NO Bell Alarm Contact

- Isolated normally open bell alarm contact
- Mounts in Type B block-type overload relay

Bell Alarm Contact

Kit Catalog Number
B3NO-2
B3NO-4 ^②

Control Contact Ratings (B600)

AC Volts	Maximum Amperes	
	Make	Break
24–120	30	3.00
121–600	3600 VA	360 VA

Continuous current rating: 5A

Overload Relay Reset Extension

- Used to adjust overload reset rod depth of Class A200 Model J starters and current design overload relays to same dimensions as obsolete B200 starters and overloads identified by suffix **B**, that is BA13B

When replacing obsolete B200 device with Class A200 starter and Type B overload, order Style 6710C11H03. No charge.

When replacing obsolete B200 device with Class A200 starter and Type A overload, order Style 1490C15H10. No charge.

Notes

- ^① Can be used on Sizes 5 and 6 with 120V coil. Mounting bracket required—order separately. Mounting bracket 177C043G04.
- ^② For Size 3 and 4.

Power Pole Kit

- Adds 1NO or 1NC power pole to Size 00–1 A201 Class contactors
- Factory installed or field mountable in load side auxiliary cavities
- 600 Vac
- Continuous current rating of 18A for Size 0, 27A for Size 1

Overload Protection**Overload Protection Size 5 Starters**

Type B overload relay is a three-pole, block type, thermal ambient compensated device with manual reset mounted integrally. Current transformers

are enclosed in a protective case and integrally mounted to save panel space. Standard ratio is 300:5.

Overload Protection Size 6 Starters

Overload protection assembly consists of three current transformers, Type B three-pole block overload relay and an optional interposing relay. These parts are mounted on a panel which connects directly to the load terminal of the

contactor. Current transformers are 600:5 ratio as standard.

If automatic reset is required, the Type A, three-pole block, ambient compensated relay is available upon request.

Notes

^① Do not use with DC operated contactors.

^② Size 7 and larger use DC coils as standard.

Overload Relay Kits

Each kit includes three current transformers (standard ratio) and one Type B, three-pole block overload relay, ambient compensated with manual reset.

XTIEC**Auxiliary Contacts**

Front mounted snap-on auxiliary contacts for **XT** contactors are available with screw or spring cage terminals in a variety of contact configurations.

The 7–32A XTCE contactors have positively driven contacts between the integrated auxiliary contact and the auxiliary contact module as well as within the auxiliary contact modules.

The 40–65A XTCE contactors have positively driven contacts within the auxiliary contact module. Six auxiliary contacts are possible with a combination of side-mounted and front-mount auxiliary contacts.

Frame B–C contactors with 1NC built-in auxiliary are mirror contacts (XTCE...B01_–XTCE...C01_).

Notes

① Front- (top) mount tall version is for use with Frame B electrical wire bridges and link kits and toolless plug combination connection kits: XTCEXRLB, XTCEXSDLB, XTPAXTPCB, XTPAXTPCRB, XTPAX.

② Can be mounted to the left side of contactor only. Cannot be used in combination with front- (top) mount auxiliary contacts or mechanical interlocks.

③ One early-make contact (1NO_E), one late-break contact (1NC_L).

Interlocked opposing contacts, to IEC/EN 60947-5-1 Annex L (positively driven), within the auxiliary contact modules (not NO [early make] and NC [late break] contacts) and for the built-in auxiliary contacts of the XTCE007B_–XTCE032C_.

Auxiliary break contact can be used as mirror contact to IEC/EN 60947-4-1 Annex F (not NC [late break] contact).

No auxiliary contacts can be fitted between two contactors.

Notes

① One early-make contact (1NO_E), one late-break contact (1NC_L).

② To maintain proper terminal marking, XTCEXSCN_ should not be used with Frame D contactors and only used with Frame F–G contactors in combination with XTCEXSBN_.

Forced operation contact to IEC/EN 60947-5-1 Appendix L (positively driven), inside the auxiliary contact unit (not early close and late opening).

Auxiliary normally closed contact can be used as mirror contact to IEC/EN 60947-4-1 Appendix F (not late opening).

No auxiliary contacts can be fitted between two contactors.

Lighting Contactors

Electrically Held Base Contactor for C30CN/ECC

The C30CNE20_0 electrically held base contactor contains a 2NO power pole as standard and will allow the addition of power poles to build an electrically held contactor up to 12 poles

maximum. A mechanically held module kit can also be added to convert the electrically held contactor into a mechanically held contactor in the field.

Electrically Held Base Contactor

Electrically Held Base Contactor

200–208V 60 Hz	E		

Power Poles for C30CNM/ECC

The C30CNM contactor accepts up to a maximum six single- or two-pole (or combinations) power poles. These can be used to form up to:

- 12 NO poles maximum when 6 two-poles are used in NO positions (1–6) or
- 8 NC poles maximum with 4 two-poles in the NC position (1–4) and 4 NO poles with 2 two-poles in the 2 NO positions (5–6)

Power Poles

Power Poles

Power Poles	Catalog Number
Single-pole	C320PRP1

	12–24 Vdc	C320MH3WT1

Note

- ^① When ordering, select required contactor by catalog number and replace the magnet coil alpha designation in the catalog number () with the proper code suffix from the Coil Base Voltage table above.

Auxiliary Contacts for C30CN/ECC

A mechanically held contactor with a two-wire control module uses 1NC auxiliary contact as standard for the control wiring circuit. The mechanically held contactor with a three-wire control

module uses 1NO-1NC auxiliary contacts as standard for the control wiring circuit. See the table below for possible additional auxiliary contact configurations.

Auxiliary Contact Configurations

Two-Wire	Three-Wire
None	1NC (two-pole)
1NO (single-pole)	1NO (two-pole)
2NO (two-pole)	1NO-1NC (two-pole)
1NC (two-pole)

Single-pole	C320AMH1
Two-pole	C320AMH2

Transient Suppressor Kits for CN35/ECL**10–60A Contactors**

These kits limit high voltage transients produced in the control circuit when power is removed from the contactor or starter coil. There are three separate suppressors for use

on 24–120V, 240V or 480V coils respectively.

These devices mount directly to the coil terminals of lighting contactors 10–60A.

C320TS2**Kits for 10–60A**

Description	Coil Voltage	Catalog Number
Transient suppressor	24–120V	C320TS1
	240V	C320TS2
	480V	C320TS3

100–300A Contactors

This device mounts on top of any side-mounted auxiliary contact on lighting contactors 100–300A. It connects across coil terminals on any 120V contactor magnet coil.

Limits high voltage transients produced in the circuit when power is removed from the coil.

C320AS1**Kits for 100–300A**

Description	Coil Voltage	Catalog Number
Transient suppressor	120V	C320AS1

Auxiliary Contacts for CN35/ECL

CN35 lighting contactors include a 1NO maintaining auxiliary contact mounted on right hand side (on 10A, two- and three-pole devices, auxiliary contact occupies fourth power pole position—no increase in width). The 10–60A devices will accept additional auxiliary contacts on the top and/or sides.

Auxiliary contact blocks are designed for snap-on installation—fast, easy installation (no tools required up to 60A). All auxiliary

contacts are of the bifurcated design with parallel circuit paths. This redundant path provides very high reliability. Auxiliary contacts can be snapped on the side (up to two circuits—per auxiliary contact) and on the top (up to four circuits). Auxiliary contacts for larger contactors, 100–400A sizes, will accept side-mounted auxiliaries only and easily attach to the side of the contactor with two screws.

Contact Configuration Code

This two-digit code is found on the auxiliary contact to assist in identifying the specific contact configuration.

The first digit indicates the quantity of NO contacts and the second indicates the quantity of NC contacts.

Make	30.0	15.0	7.5	6.0
Break	3.0	1.5	0.75	0.6

Solid-State Timers for CN35/ECL**Solid-State ON DELAY Timer—Side-Mounted on CN35 Freedom Series Lighting Contactors Through 60A**

This timer is designed to be **wired in SERIES with the load** (typically a coil). When the START button is pushed (power applied to timer), the

ON DELAY timing function starts. At the completion of the set timing period, timer and series wired load will both be energized.

Solid-State Timer**Product Selection—Mounted Timer**

Timing Range	Catalog Number ^{④⑤⑥}
0.1–1.0 seconds	C320TDN1_
1–30 seconds	C320TDN30_
30–300 seconds	C320TDN300_
5–30 minutes	C320TDN3000_

Notes

- ① Available positions on contactors or starters other than what is factory installed.
- ② When a pneumatic timer is mounted on contactor, only side-mounted auxiliary contact positions are available. The solid-state timer, when added, takes up side-mounted auxiliary contact position.
- ③ For 100–400A contactors, a base auxiliary contact must be added in position L1 before additional contacts can be mounted.
- ④ Add operating voltage suffix to catalog number. **A** = 120V, **B** = 240V, **E** = 208V.
- ⑤ Rated 0.5A pilot duty—not to be used on larger contactors.
- ⑥ Terminal connections are quick connects only. Two per side.

Type J Auxiliary Contact for A202/ECL

- Capable of being field mounted in a contactor or starter (Classes A200, A900 Sizes 00–6, V200, V201 vacuum and definite purpose controllers)
- Provides two separate electrical contact sets which wire vertically and are color coded; black designates NC and silver designates NO. Please note that the vertical wiring is contrary to the horizontal wiring of the L-56 auxiliary contacts
- Designed to fit within dimensions of starter; no additional panel space is required
- Provides circuit isolation (no polarity restrictions) and single break bifurcated contacts

R-56 Interposing Relay for A202/ECL

The R-56AA interposing relay is a low energy solid-state device with a single NO solid-state contact. It can be used as a 120 Vac control relay, and will operate on as little as 40 Vac input. Is useful in

applications requiring long control wiring runs where excessive voltage drop would prevent the contactor or relay from energizing. Will operate a Size 4 contactor from 10,000 ft using 18 AWG wire.

Interposing Relay

Accelerating relay	For two-speed	A46
	2NO/2NC 24 Vdc auxiliary relay— IT only	A47

B—Breaker Modifications, Backspin Timer, Undervoltage Release, Bell Alarm, Bus Choke

Modification	Description	Catalog Number Suffix
Breaker	1NO-1NC auxiliary contact on breaker	B1
	2NO-2NC auxiliary contacts on breaker	B2
	Shunt trip on circuit breaker—48–127 Vac or Vdc	B3
	Shunt trip on circuit breaker—9–24 Vac or Vdc	B4
	Shunt trip on circuit breaker—208–380 Vac	B5
	Shunt trip on circuit breaker—415–600 Vac or 220–250 Vdc	B6
	Undervoltage release for breaker	B8
	Current limiter mounted to breaker	B9
	Breaker—order by description	B10
	Thermal magnetic breaker	B11
Backspin timer	180 seconds	B12
Undervoltage release	Undervoltage release for circuit breaker—208–240 Vac	B13
	Undervoltage release for circuit breaker—380–480 Vac	B14
	Undervoltage release for circuit breaker—525–600 Vac	B15
Bell alarm	Bell alarm for circuit breaker	B16

Note

^① Available on **XT** starters for 40A and greater only.

C—Control Power Transformer, Power Supplies, Control Relays, Cover Control (not elsewhere defined), Current Transformers, Compelling Relay, Control Wiring, Control Circuit Breaker, Separate Control, Customer-Supplied Components, Contactors, Counter, E-Stop Relay, DC/AC Interface, Separate Source Disconnect, Bypass Contactors

Modification	Description	Catalog Number Suffix
Control power transformers	Standard size control transformer, 120V/60 Hz, 110V/50 Hz secondary with two primary and one secondary fuse	C1
Make sure eighth character specifies primary/secondary voltage	Standard size control transformer, 24V/60 Hz secondary with two primary and one secondary fuse	C2
	50 VA extra capacity CPT 120V/60 Hz, 110V/50 Hz with two primary and one secondary	C42
	100 VA extra capacity CPT, 120V/60 Hz, 110V/50 Hz secondary with two primary and one secondary fuse	C3
	100 VA extra capacity CPT, 24V/60 Hz secondary with two primary and one secondary fuse	C4
	200 VA extra capacity CPT, 120V/60 Hz, 110V/50 Hz secondary with two primary and one secondary fuse	C5
	200 VA extra capacity CPT, 24V/60 Hz secondary with two primary and one secondary fuse	C6
	300 VA extra capacity CPT, 120V/60 Hz, 110V/50 Hz secondary with two primary and one secondary fuse	C7
	400 VA extra capacity CPT, 120V/60 Hz, 110V/50 Hz secondary with two primary and one secondary fuse	C8
	1 kVA extra capacity CPT, 120V/60 Hz, 110V/50 Hz secondary with two primary and one secondary fuse	C9
	2 kVA extra capacity CPT, 120V/60 Hz, 110V/50 Hz secondary with two primary and one secondary fuse	C10
	Control transformer—order by description	C11
	CPT with power supply for XT	C34
Power supplies (XT only)	Separate control 120 Vac to 24 Vdc	C27
	Power supply with extra capacity—order by description	C28
Control relays	Four-pole interposing relay, 600V (2NO/2NC)	C12
	Four-pole, unwired, A600 rtg.—2NO-2NC	C14
	Eight-pole, unwired, A600 rtg.—4NO-4NC	C15
	Control relay—order by description	C16
	Three-wire control module (C30 lighting)	C18 ①
	Two-wire control relay for mechanical/magnetic lighting contactors	C20 ①
Cover control	Convert position seven to E30 type cover control	C17
	Lock-off attachment added on cover control	C19
	Change to M22 (22 mm) cover controls	C29
Current transformer(s)	In phase 1	C21
	In phases 1 and 2	C22
	In 3 phases	C23
Compelling relay	—	C25
Control wiring	Omit control wiring	C26
	With separate control wiring and two 250V fuses in holder	C30
	With common control wiring and two 600V (Class C) fuses in holder	C31
	Control wiring type—order by description	C33
Control circuit breaker	Order by description	C32
Separate control	Wired for separate control (reduced voltage)	C35
Customer supplied components	Customer supplied components to be installed	C36
	Customer supplied wiring diagram to use	C37

Note

① Not available for **XT** starters.

Modification Codes

C—Control Power Transformer, IT Power Supplies, Control Relays, Cover Control (not elsewhere defined), Current Transformers, Compelling Relay, Control Wiring, Control Circuit Breaker, Separate Control, Customer-Supplied Components, Contactors, Counter, E-Stop Relay, DC/AC Interface, Separate Source Disconnect, Bypass Contactors, continued

Modification	Description	Catalog Number Suffix
Contactors/starter	Contactors/starter—order by description	C40
Counter	Operations counter	C41
E-stop relay	E-stop relay (DeviceNet)	C43
DC/AC interface	DC/AC interface module	C44 ^①
Separate source disconnect	IEC separate source disconnect for control circuitry	C45
Bypass contactors for IT RVSS	Isolation contactor	C46/J1
	Output contactor	C46/J2
	Bypass contactor	C46/J3
	Isolation/output/bypass contactor	C46/J4

D—Device Labels, Deceleration Relay, Drain and Breather, Duplex Modifications

Modification	Description	Catalog Number Suffix
Device labels	(Each label)	D1
Decel. relay ^①	Two-speed	D2
Drain and breather (Type 7/9 enclosure) ^①	Drain and breather	D5
	Drain only	D6
	Breather only	D7
Duplex modifications	Alternator omitted (deduct price)	D12
	START/STOP pushbuttons—supplied for each motor	D14
	HAND/OFF/AUTO selector switch—supplied for each motor	D15
	No. 1 lead—No. 2 lead selector switch for manual selection of lead pump (alternator is omitted)	D16
	Red RUN pilot light—supplied for each motor	D17
	Push-to-test red RUN pilot light—supplied for each motor	D18
	TEST pushbutton for each motor	D19
	CPT, 120V secondary, two primary fuses and one secondary fuse—supplied for each motor	D20
	CPT with 100VA extra capacity, 120V secondary, two primary fuses and one secondary fuse—supplied for each motor	D21
	CPT with 200VA extra capacity, 120V secondary, two primary fuses and one secondary fuse—supplied for each motor	D22
	CPT for duplex—order by description	D23
	Add two relays to modify controller to operate with single-pole pilot devices	D24
	Add three relays to modify controller to operate with single-pole pilot devices	D25
	Green—OFF for each starter	D26
	Green—push-to-test OFF for each starter	D27
	Green—RUN light (duplex pump)	D28
	Red—STOP light (duplex pump)	D29
	P-T-T—green RUN light (duplex pump)	D30
	P-T-T—red STOP light (duplex pump)	D31
	Elapsed time meter (duplex pump)	D32

Note

^① Not available for **XT** starters.

E—Enclosure Modifications, Elapsed Time Meter, Duplex Outlet, Enclosure for Starter, Enclosure Clear Cover, Enclosure Material

Modification	Description	Catalog Number Suffix
Enclosure modifications	Oversize enclosure	E3
	Enclosure—order by description	E4
	Enclosure with pole mounting hardware	E5
	Removable end plates	E6
	Service entrance rating (ground/neutral banding SE labels)	E7
	Service entrance rating with ground bar	E8
	Safety door interlock	E11
Elapsed time meter	Wired across coil, Type 1, 12	E9
	Wired across coil, Type 3R, 4X	
	Elapsed time meter—order by description	E10
Duplex outlet	Convenience duplex outlet mounted in side of enclosure	E12
Enclosure for starter ^①	Horizontal combination starter, Size 0–2	E13
	Narrow combination starter, Size 0–2	E14
Enclosure clear cover for XT	Clear cover for Halyester enclosure non-metallic	E19
Enclosure material	Convert to 316 stainless steel	E16
	Convert from Type 3R to stainless steel	E21
Irrigation pump panel	Bottom entry	E17

F—Fuse Clips, Fuse Blocks, Fungus Protection, Fingerproof Covers, EMI Filter

Modification	Description	Catalog Number Suffix
Fuse clips ^①	Change fuse clips in position eight to Class J	F1
	Change fuse clips in position eight to Class H and K (30A and 60A only)	F2
Fuse blocks	Power fuses included—order by description	F4
	30A control circuit fuseholder (KTK) mounted on panel (unwired), fuse not supplied	F5
	30A control circuit fuseholder mounted on panel (unwired), FNQR fuse supplied	F6
	Three-pole power fuseholder mounted on front contactor	F7
	Separate fusing of control power supply— IT	F8
	Blown fuse indicator (not for PFC)	F10
	Class CC fuses	F21

G—Ground Fault Relay, Grounding

Modification	Description	Catalog Number Suffix
Ground fault relay	Ground fault relay (wired)	G1
	Ground fault relay (unwired)	G3
Grounding	Special grounding—order by description	G5
	Ground fault protection and monitoring panel	G7

Note

^① Not available for **XT** starters.

H—Heater (Space), Heater Packs Installed

Modification	Description	Catalog Number Suffix
Space heater	Space heater and thermostat	H1
	Space heater and NC interlock	H2
Install heater packs (Freedom Series)	Class 20	Class 10

	Overload reset (order by description)			R7	
	Manual reset only on overload relay			R44	
	Auto reset only on overload relay			R45	
	Internal trip indicator—no external reset			R47	
	External reset with external trip indicator			R48	
	External reset with bell alarm			R49	
	N3R reset boot added (Type 1/12 only)			R71	
Reversing ^⑤	Reversing contactor/starter			R54	
Overload relay mods	Anti plug-in			R53	
DeviceNet interface	DeviceNet interface			R69	
	Standard reset for DeviceNet			R65	
	Lighted reset for DeviceNet			R66	
	Trip indicator for DeviceNet			R67	

Notes

① Features:

- Self-powered
- Phase loss protection
- Current adjustment knob
- ±1% repeat accuracy
- 1NO and 1NC isolated contacts

② Not UL Listed.

③ NEMA Size 5 starter available with 60–300A panel mounted CTs. Starter as an assembled unit with 1–5A C440 overload relay (C440A1A005SELAX or C440A2A005SELAX).

④ NEMA Size 6 starter available with 120–600A panel mounted CTs. Starter as an assembled unit with 1–5A C440 overload relay (C440A1A005SELAX or C440A2A005SELAX).

⑤ Not available for **XT** starters.

	FAST/OFF/SLOW/AUTO	S43
	Selector switch omitted (pump panels only)	S19
	Selector switch—order by description	S40
	RVSS/BYPASS (soft starters only)	S44
	LOCAL/REMOTE selector switch	S45
	RUN/OFF selector switch	S46
Suppressor	Transient suppressor mounted on magnet coil	S24
Surge suppression	MOV (IT)	S20
Sequence timer	Sequence timer (pump panels)	S26
Sequence protection	Incomplete sequence protection	S27
Pump	480V BP9000 pump	S28
Single-phase	Convert contactor or starter from three-phase to single-phase—install jumper	S29
	Single-phase rev. 120V	S30
	Single-phase rev. 240V	S31
Surge capacitor	Surge capacitor wired to disconnect line side	S37

Note

^① When using three-position selector switch with magnetic lighting contactor, mod **C20** must also be used (ECL04, ECL13, ECL15).

T—Timers, Time Delay Relays, Terminal Blocks, Terminal Points, Ring Lug Connections

Modification	Description	Catalog Number Suffix
Timers	Pneumatic timer installed on contactor, unwired, 30 seconds maximum	T1
	Pneumatic timer installed on contactor, unwired, 180 seconds maximum	T2
	Pneumatic timer mounted in enclosure, unwired, 180 seconds maximum	T3
	Solid-state ON delay timer (1–30 seconds)	T4
	Solid-state ON delay timer (30–300 seconds)	T5
	Timer—order by description	T25
Time delay relays	Time delay relay, 3 minutes maximum, unwired, ON DELAY	T6
	Time delay relay, 3 minutes maximum, unwired, OFF DELAY	T7
	Time delay low voltage release relay	T8
Terminal blocks	With one single circuit terminal block, unwired	T9
	With two single circuit terminal block, unwired	T10
Terminal points	With 6 terminal points, unwired	T11
	With 12 terminal points, unwired	T12
	With 18 terminal points, unwired	T13
	Terminal point per customer specification, unwired (price each)	T14
	Terminal point per customer specification, wired (unwired without customer diagram)	T15
	Three terminals mounted between contactor and overload for power factor capacitors—Sizes 0–2	T21
	Three terminals mounted between contactor and overload for power factor capacitors—Sizes 3–4	T22
	Quick-connect terminals added to DP contactor/starter	T23
Ring lug connections	Ring lug connections on power wires	T16 ①
	Ring lug connections on control wires	T17

15 U—Undervoltage Relay, Time Delay Undervoltage Relay

Modification	Description	Catalog Number Suffix
Undervoltage relays	Undervoltage relay, non-adjustable	U1
	Undervoltage relay, adjustable	U2
Time delay undervoltage relays	Time delay undervoltage relay, non-adjustable	U4
	Time delay undervoltage relay, adjustable	U5
Under- and overvoltage relay	Under- and overvoltage relay	U7

Note① Not available for **XT** starters.

V—Voltmeter, Varmeter, Vacuum Starter

Modification	Description	Catalog Number Suffix
Voltmeters	One panel type voltmeter wired L1–L2	V1
	Panel type voltmeter and selector switch wired to read three-line voltages	V2
	Miniature voltmeter wired L1–L2	V3 ^①
	Miniature voltmeter and selector switch wired to read three-line voltages	V4 ^①
	Switchboard type voltmeter wired L1 – L2	V5
	Switchboard type voltmeter and selector switch wired to read three-line voltage	V6 ^①
	Three panel type voltmeters wired in each phase	V7
	Three miniature voltmeters wired in each phase	V8 ^①
	Three switchboard type voltmeters wired in each phase	V9 ^①
	Voltmeter—order by description	V10
Varmeter ^②	Varmeter	V11
	Varmeter—order by description	V12
Vacuum starter ^②	Vacuum starter—1500V rating	V13

W—Wattmeter, Watt-Hour Meter, Wiremarkers, Wiring Diagram

Modification	Description	Catalog Number Suffix
Wattmeter ^①	Wattmeter	W1
Watt-hour meter ^①	Watt-hour meter	W3
	Watt-hour meter with demand attachment	W5
Wiremarkers	Wiremarkers	W7
	Wiremarkers—order per customer diagram or specifications	W8
	Wiremarkers—order by description	W9
WYE-Delta hp	See Tab 5	W10 ^②
Windows in enclosure	Enclosure windows	W11
Wiring diagram	Reduced copy of custom wiring diagram laminated on inside of door	W12

Notes

^① Type 1/12 only.

^② Not available for **XT** starters.

Note

^① Voltage ratings of the main coils must match those of the feeder group for proper operation of the starter/contactator.

A200 Line

When Ordering Specify

- Use this renewal parts data to identify device by style number, catalog number and/or description
- Select style number of replacement part from the following pages
- For clarification of ordering procedure, pricing and discounts, contact the customer support center

General Information

This renewal parts data will provide the proper identification of standard parts which may be required for maintenance of Eaton's components.

It is the intent of this catalog section to make it possible to quickly select the parts needed.

An investment in renewal parts and a regular maintenance program will protect against downtime and ensure a proper duty cycle for your equipment.

To maintain maximum operating efficiency and dependability of your equipment, only genuine

Eaton replacement parts should be used.

This section identifies the replacements parts which are available. Order by style number.

Note: Kits contain a complete set of moving contacts, stationary contacts and springs.

Notes

^① Model C contact tips and coils 00-4, two-, three-, four- and five-pole contactors are same as Model J. All other parts are unavailable.

^② Use one each of 373B331G11 and 373B331G12.

^③ Mounting hardware included.

^④ Two- and three-pole.

^⑤ Four- and five-pole.

^⑥ Dual voltage coils. Use only on contactors or starters originally supplied with a dual voltage coil.

^⑦ Use only on contactors originally supplied with a DC coil.

Accessories for Size 5–9 AC Contactors

Note: A rectifier circuit converts the AC supply to DC supply. This conversion provides pick up and drop out characteristics. All necessary parts are included in the kit.

Notes

- ① Model C contact tips and coils 00-4, two-, three-, four- and five-pole contactors are same as Model J. All other parts are unavailable.
- ② For 200A A202 magnetically latched lighting contactors order three-pole contact kit style 672B788G07.
- ③ Model K replaces Model J, offering superior design life characteristics. Renewal parts are different. Use parts for proper model only.
- ④ Use quantity 2 of 626B187G12.
- ⑤ Use quantity 2 of 626B187G16.
- ⑥ Use quantity 1 each of 626B187G12 and 626B187G13.
- ⑦ Use quantity 1 each of 626B187G16 and 626B187G17.
- ⑧ Use only on units originally supplied with DC coil.
- ⑨ Dual voltage coils. Use only on contactors or starters originally supplied with dual voltage coil.

Description	Size	Part Number
Control module (rectifier)	30–200A	3915B98G01

Arc boxes, upper base assemblies and cross bars are equivalent to the A201 series. Consult Eaton.

Contact kits are equivalent to the A201 Model J series, with the exception of the magnetically latched 200A unit. It uses catalog number 672B788G07 for the three-pole device. For other poles, consult Eaton.

Notes

- ① Order quantity of two for four-pole design.
 ② Group members for the five-pole terminal represent the combination of the two- and three-pole number.

Standards and Certifications

UL File Numbers

The enclosed control products from Eaton's electrical sector are covered by three UL file numbers. Where UL or UL 508 is listed under the Standards and Certifications headers in this catalog or labeled on the products, the following UL file numbers apply. For example: ECN0521AAA is covered by UL file number E19224, while ECS92S1EAF is covered by UL file number E175513.

- E19224—Non-Combination Motor Controllers
- E176513—Combination Motor Controllers
- E195239—Power Conversion Equipment

ABS Type Approval

The Eaton enclosed control products have been tested and approved for American Bureau of Shipping standards. Both a Product Quality Assurance and Design Assessment approvals must be met in order to comply to ABS Type Approval. The following are Eaton's ABS file numbers for products:

- QA-1597-X—Product Quality Assurance
- 63-HS385744-PDA—Design Assessment

cUL Label

The Eaton enclosed control products have been tested and approved for Canadian UL where cUL is listed in this catalog under the Standards and Certifications headers or labeled on the products. The cUL label also indicates that the appropriate **CSA Standard** has been investigated. The following numbers demonstrate cUL approval:

- E19224—Non-Combination Motor Controllers
- E176513—Combination Motor Controllers
- E195239—Power Conversion Equipment

CE Label

Where the CE label is applied or certification is mentioned, Eaton has undergone the proper testing to meet or exceed CE requirements. As CE is a self-administered certification, no CE file number is available. However, several products have undergone KEMA KEUR testing, a third party CE-certification testing agency. KEMA reference numbers are available upon request.

Other standards and certifications may apply as noted in product literature. For additional reference information, refer to the Consulting Application Guide or your local Eaton distributor.

Component Standards and Certifications

The standards and certifications described in this catalog are for enclosed control products from Eaton's electrical sector. Testing has been done on the complete enclosed assembly in order to achieve these certifications. For additional information on the standards and certifications for the components used in Eaton's enclosed control, please refer to the Eaton Control Products Catalog.

Short-Circuit Testing

Interrupting ratings—

All Eaton enclosed control products have been designed and tested for short-circuit interrupting capabilities.

Interrupting Ratings

- **Fusible**—Sizes 1–5 suitable for use on a circuit capable of delivering not more than 100,000 rms symmetrical amperes. 600V maximum where a Class R fuse clip kit is properly installed and Class R fuses are used. If Class R fuses are not used, the switch should not be installed on circuits capable of delivering more than 10,000 rms symmetrical amperes. Size 6 is limited to 18,000 and Size 7 is limited to 30,000 rms symmetrical amperes
- **Circuit breaker HMCPE**—Sizes 1–3 controllers are suitable for use on circuits capable of delivering not more than 100,000 rms symmetrical amperes at 480V maximum; for 600V applications not more than 25,000 rms symmetrical amperes
- **HVAC panel and ECP irrigation pump panel**—suitable for use on circuits capable of delivering not more than 10,000 rms symmetrical amperes at 600V maximum

Freedom Line

Furnish as indicated Eaton Class ECN combination starters manufactured by Eaton's electrical sector or approved equal. All starters

shall be UL listed and conform to the latest standards and the National Electric Code.

Non-Reversing

Description	Catalog Number
Disconnect switch	ECN16
Disconnect switch with control power transformer	ECN18
Circuit breaker (HMCPE/HMCP)	ECN22
Circuit breaker with control power transformer	ECN24

Reversing

Description	Catalog Number
Disconnect switch	ECN17
Circuit breaker (HMCPE/HMCP)	ECN23

General

- All motor starters shall be NEMA Sizes 0–9. Each starter shall have one NO auxiliary contact, or as scheduled
- Overload relays shall be ambient compensated bimetallic type with interchangeable heaters, calibrated for 1.0 and 1.15 service factor motors. Electrically isolated NO and NC contacts shall be provided on the relay. Visual trip indication shall be standard. A test trip feature shall be provided for ease of troubleshooting and shall be conveniently operable without removing components or the motor starter
- Control circuit transformers, where specified, shall be encapsulated. Primary and secondary fusing shall be provided. Unless otherwise specified, the secondary shall be 120 Vac. 50 VA is minimum
- Pilot devices, where specified, shall be oiltight and mounted in the flange. Pilot lights shall be transformer type for longer lamp life. Pilot device legend plates shall be engraved aluminum

- Solid-state overloads (SSOL), when specified, shall be heaterless and be capable of selecting Class 10, 20 or 30 protection with manual or automatic reset options. Full-load current settings shall be dial-adjustable

Enclosure

- Enclosures shall be Type 1, 3R, 4, 4X, 7/9 or 12, as scheduled
- The operating mechanism shall be mounted on the flange and shall have positive, non-teasing ON/OFF action. The handle shall be color-coded: red for ON and black for OFF
- The operating handle shall have a means to lock the handle in the OFF position with a minimum of three standard padlocks having 1/4 in diameter shackles
- The enclosure sub-panel shall be easily removed without disturbing the operating mechanism on Sizes 0–3
- Enclosures shall have means for locking the cover

Short-Circuit Protective Device

Disconnect Switch

- Where specified, a disconnect switch with double break, rotary blades and quick make/quick break action shall be provided
- A line shield with test probe holes for inspection shall be provided. The shield shall be removable
- The switch shall have readily visible blades in the open (OFF) position
- The fusible disconnect switch (through 100A) shall have built-in fuse pullers to make it easier to remove fuses

Circuit Breaker

- Where specified, an adjustable instantaneous trip, magnetic only circuit breaker shall be provided
- A manual push-to-trip button shall be provided to exercise the trip unit

Short-Circuit Rating

- Fusible disconnect switches shall be UL listed for 100,000 amperes available when Class R fuses are used
- Combination starters with adjustable instantaneous trip, magnetic only circuit breakers shall be UL listed for 100,000 amperes available through 480 Vac
- Note specific short-circuit ratings for the ECP irrigation pump panel and the HVAC panel on **Page V10-T17-2**

Technical Data

All data is based on a standard contactor with no auxiliary devices and a 120 Vac or 24 Vdc magnet

coil. Coil data has a $\pm 5\%$ range depending on the application, therefore specific data may vary.

Coil Data Notes

P.U. Pickup time is the average time taken from closing of the coil circuit to main contact touch

D.O. Dropout time is the average time taken from opening of the coil circuit to main contact separation

Cold Coil data with a cold coil

Hot Coil data with a hot coil

Electrical Life—AC-3 and AC-4 Utilization Categories

Life Load Curves

Eaton's Freedom Series NEMA contactors have been designed and manufactured for superior life performance in any worldwide application. All testing has been based on requirements as found in NEMA and UL standards and conducted by Eaton. Actual application life may vary depending on environmental conditions and application duty cycle.

Utilization Categories

AC-1—Non-inductive or slightly inductive loads, such as resistance furnaces and heating.

AC-2—Starting of slip-ring motors.

AC-3—Squirrel cage motors; starting, switching off motors during running.

AC-4—Squirrel cage motors; starting, plugging, inching or jogging.

Note: AC-3 tests are conducted at rated device currents and AC-4 tests are conducted at six times rated device currents. All tests have been run at 460V, 60 Hz.

Contactor Choice

- Decide what utilization category your application is and choose the appropriate curve
- Locate the intersection of the life-load curve of the appropriate contactor with the applications operational current (I_o), as found on the horizontal axis
- Read the estimated contact life along the vertical axis in number of operational cycles

AC-3 and AC-4 Utilization Categories

C306 Overload Relay Setting**FLA Dial Adjustment**

Example of 12.0 FLA Setting for Heater Pack Number H2011B Showing Position for 1.0 or 1.15 Service Factor Motors

For motors having a 1.15 service factor, rotate the FLA adjustment dial to correspond to the motor's FLA rating.

Estimate the dial position when the motor FLA falls between two letter values as shown in the example.

For motors having a 1.0 service factor, rotate the FLA dial one-half position counterclockwise (CCW).

Manual/Automatic Reset

Example of Setting for Manual Reset

The overload relay is factory set at M for manual reset operation. For automatic reset operation, turn the reset adjustment dial to the A position as shown in the illustration.

Automatic reset is not intended for two-wire control devices.

Test for Trip Indication

To test overload relay for trip indication when in manual reset, pull out the blue reset button. An orange flag will appear indicating that the device has tripped. Push reset button in to reset.

Warning—To provide continued protection against fire or shock hazard, the complete overload relay must be replaced if burnout of the heater element occurs.

Heater Pack Selection

"Overload relays are provided to protect motors, motor control apparatus and motor-branch circuit conductors against excessive heating due to motor overloads and failure to start. This definition does not include: 1) motor circuits over 600V, 2) short-circuits, 3) ground faults and 4) fire pump control." (NEC Art. 430-31)

Time Current Characteristics

The time-current characteristics of an overload relay is an expression of performance that defines its operating time at various multiples of its current setting. Tests are run at Underwriters Laboratories (UL) in accordance with NEMA Standards and the NEC. UL requires:

- When tested at 100 percent of its current rating, the overload relay shall trip ultimately
- When tested at 200 percent of its current rating, the overload relay shall trip in not more than 8 minutes

- When tested at 600 percent of the current rating, the overload relay shall trip in not more than 10 or 20 seconds, depending on the Class of the relay

"Current rating" is defined as the minimum current at which the relay will trip. Per NEC, an overload must ultimately trip at 125% of FLA current (heater) setting for a 1.15 service factor motor and 115% FLA for a 1.0 service factor motor.

"Current setting" is defined as the FLA (Full Load Amperes) of the motor and thus the overload heater pack setting.

Example: 600% of current rating is defined as 750% (600×1.25) of FLA current (heater) setting for a 1.15 service factor motor. A 10A heater setting must trip in 20 seconds or less at 75A motor current for a Class 20 relay.

XTLine

Furnish as indicated Eaton Class ECX combination starters manufactured by Eaton's electrical sector or approved equal. All starters

shall be UL listed and conform to the latest IEC Standards and the National Electric Code.

Non-Reversing

Description	Catalog Number
Disconnect switch	ECX19
Circuit breaker (HMCP)	ECX25

Reversing

Description	Catalog Number
Disconnect switch	ECX20
Circuit breaker (HMCP)	ECX26

General

- All motor starters shall be IEC Sizes A–N (60 hp at 460V). Each starter shall have one NO auxiliary contact, or as scheduled
- Overload relays shall be ambient compensated bimetallic type with interchangeable heaters, calibrated for 1.0 and 1.15 service factor motors. Electrically isolated NO and NC contacts shall be provided on the relay. Visual trip indication shall be standard. A test trip feature shall be provided for ease of troubleshooting and shall be conveniently operable without removing components or the motor starter. Overload relays may also be solid-state
- Control circuit transformers, where specified, shall be encapsulated. Primary and secondary fusing shall be provided. Unless otherwise specified, the secondary shall be 120 Vac. 50 VA is minimum
- Pilot devices, where specified, shall be oiltight and mounted in the flange. Pilot lights shall be transformer type for longer lamp life. Pilot device legend plates shall be engraved aluminum

Enclosure

- Enclosures shall be Type 1, 3R, 4, 4X, 7/9 or 12, as scheduled
- The operating mechanism shall be mounted on the flange and shall have positive, non-teasing ON/OFF action. The handle shall be color-coded: red for ON and black for OFF
- The operating handle shall have a means to lock the handle in the OFF position with a minimum of three standard padlocks having 1/4 in diameter shackles
- The enclosure sub-panel shall be easily removed without disturbing the operating mechanism
- Enclosures shall have means for locking the cover

Short-Circuit Protective Device**Disconnect Switch**

- Where specified, a disconnect switch with double break, rotary blades and quick make/quick break action shall be provided
- A line shield with test probe holes for inspection shall be provided. The shield shall be removable
- The switch shall have readily visible blades in the open (OFF) position
- The fusible disconnect switch (through 100A) shall have built-in fuse pullers to make it easier to remove fuses

Circuit Breaker

- Where specified, an adjustable instantaneous trip, magnetic only circuit breaker shall be provided
- A manual push-to-trip button shall be provided to exercise the trip unit

Short-Circuit Rating

- Fusible disconnect switches shall be UL listed for 100,000 amperes available when Class R fuses are used
- Combination starters with adjustable instantaneous trip, magnetic only circuit breakers shall be UL listed for 100,000 amperes available through 480 Vac

Note

^① Example—

The transformer has a nominal current of 10A with an inrush current of 18 times the nominal current. So, the contactor must have an AC-3 current of $18/6 \times 10A = 30A$. Using an XTCE032C (32A AC-3) contactor is recommended.

Description	XTCE185L	XTCE225L	XTCE250L	XTCE300M	XTCE400M	XTCE500M	XTCE570M	XTCE580N
Conventional free air thermal current, three-pole, 50–60 Hz								
at 40°C (I_{th})	337	386	429	490	612	857	857	980
at 50°C (I_{th})	301	345	383	438	548	767	767	876
at 55°C (I_{th})	287	329	366	418	522	731	731	836
at 60°C (I_{th})	275	315	350	400	500	700	700	800
Conventional free air thermal current, single-pole (I_{th})	685	785	875	1000	1250	1750	1750	2000

Note

^① Example—The transformer has a nominal current of 10A with an inrush current of 18 times the nominal current. So, the contactor must have an AC-3 current of $18/6 \times 10A = 30A$. Using an XTCE032C (32A AC-3) contactor is recommended.

Switching Duty for Non-Motor Loads, Three-Pole, Four-Pole—XTCE185L—XTCEC14P

Short-Time Loading, Three-Pole—XTCE185L—XTCEC20R

Maximum Operating Frequency—Related to Rating and Utilization Category (400V)

Utilization Category ①

Type	Characteristic Curve Above		
	AC-1	AC-3	AC-2 AC-4
XTCE007B—XTCE015B	3	1	5
XTCE018C—XTCE032C	3	2	5
XTCE040D—XTCE065D	3	2	5
XTCE080F—XTCE150G	3	4	5

7–150 hp

Utilization Category ①

Type	Characteristic Curve Above			Type	Characteristic Curve Above		
	AC-1	AC-3	AC-4		AC-1	AC-3	AC-4
XTCE185L	2	1	6	XTCE500M	3	2	7
XTCE225L	2	1	6	XTCE580N	3	4	5
XTCE250L	2	1	6	XTCE650N	3	4	5
XTCE300M	3	2	7	XTCE750N	3	4	5
XTCE400M	3	2	7	XTCE820N	3	4	5

185–820 hp

Note

- ① P_N = maximum motor rating (kW/hp) of the relevant contactor.
ops/hr = maximum number of operations per hour.

Overload Relays

XTOB Overload Relay—Technical Data and Specifications

Description	XTOB...BC1, XTOB...CC1	XTOB...DC1	XTOB...GC1, XTOB...GC1S	XTOB...LC1
General				
Standards	IEC/EN 60947, VDE 0660, UL, CSA			
Climate proofing	Damp heat, constant, to IEC 60068-2-78; damp heat, cyclic, to IEC 60068-2-30			
Ambient temperature ^①	–25° to 55°C (–13° to 131°F)	–25° to 55°C (–13° to 131°F)	–25° to 55°C (–13° to 131°F)	–25° to 50°C (–13° to 122°F)
Temperature compensation	Continuous	Continuous	Continuous	Continuous
Mechanical shock resistance (IEC/EN 60068-2-27) half-sinusoidal shock 10 ms	10g	10g	10g	10g
Degree of protection	IP20	IP20	IP20	P00
Protection against direct contact when actuated from front (IEC 536)	Finger- and back of hand-proof	Finger- and back of hand-proof	Finger- and back of hand-proof	With terminal cover XTOBXTS...L
Insulation voltage (U _i) Vac	690	690	690	1000
Overvoltage category/pollution degree	III/3	III/3	III/3	III/3
Impulse withstand voltage (U _{imp}) Vac	6000	6000	6000	8000
Operational voltage (U _e) Vac	690	690	690	1000
Safe isolation to VDE 0106 Part 101 and Part 101/A1 Between auxiliary contacts and main contacts (Vac)	440	440	440	440
Between main contacts (Vac)	440	440	440	440
Overload release setting range	0.1–32A	6–75A	25–150A	50–250A
Short-circuit protection maximum fuse	②	②	②	②
Temperature compensation residual error >40°C	<0.25	<0.25	<0.25	<0.25
Current heat loss (three conductors) Lower value of setting range, W	2.5	3	16	16
Upper value of setting range	6	7.5	28	28
Terminal capacity				
Solid, mm ²	2 x (1–6)	2 x (1–16)	2 x (4–16)	—
Flexible with ferrule, mm ²	2 x (1–4) 2 x (1–6) ③	1 x 25 2 x (1–10) ④	1 x (4–70) 2 x (4–50)	—
Flexible with cable lug, mm ²	—	—	—	95
Stranded with cable lug, mm ²	—	—	—	120
Solid or stranded, AWG	14–8	14–2	2/0	250 kcmil
Flat conductor— number of segments x width x thickness (mm ²)	—	—	—	6 x 16 x 18
Bus bar—width (mm)	—	—	—	20 x 3
Terminal screw	M4	M6	M10	M8 x 25
Tightening torque				
Nm	1.8	3.5	10	24
Lb-in	16	31	88.5	221.3
Tools				
Pozidriv screwdriver	Size 2	Size 2	—	—
Standard screwdriver	1 x 6	1 x 6	—	—
Hexagon socket head spanner (SW)	—	—	5 mm	13 mm

Notes

① Ambient temperature operating range to IEC/EN 60947, PTB: –5° to 50°C.

② Consult factory.

③ 6 mm² flexible with ferrules to DIN 46228.

④ Main contact terminal capacity, solid and stranded conductors with ferrules: When using 2 conductors use identical cross-section.

Maximum fuse, A gG/gL	6	6	6	6

Note

^① Rated operational current: Making and breaking conditions to DC-13, L/R constant as stated.

Tripping Characteristics

These tripping characteristics are the mean values of the spread at 20°C ambient temperature in a cold state.

Tripping time depends on response current. With devices at operating temperature, the tripping time of the overload relay reduces to approximately 25% of the read off value. Specific characteristics for each individual setting range can be found in MN03402001E.

Tripping Characteristics

Operation

Starting and Stopping Modes

The S611 has a variety of starting and stopping methods to provide superior performance in the most demanding applications. The motor can be started in either Voltage Ramp Start or Current Limit Start mode. Kick Start and Soft Stop are available within both starting modes.

Voltage Ramp Start

Provides a voltage ramp to the motor resulting in a constant torque increase. The most commonly used form of soft start, this start mode allows you to set the initial torque value and the duration of the ramp to full voltage conditions. Bypass contactors close after ramp time.

- Adjustable initial torque 0–85% of locked rotor torque
- Adjustable ramp time 0.5–180 seconds (can be extended with factory modification)

Starting Characteristics—Ramp Start

Current Limit Start

Limits the maximum current available to the motor during the start phase. This mode of soft starting is used when it becomes necessary to limit the maximum starting current due to long start times or to protect the motor. This start

mode allows you to set the maximum starting current as a percentage of locked rotor current and the duration of the current limit. Bypass contactors close after current limit time.

- Maximum current of 0–85% locked rotor current
- Adjustable ramp time 0.5–180 seconds (can be extended with factory modification)

Starting Characteristics—Current Limit Start

Kick Start

Selectable feature in both Voltage Ramp Start and Current Limit Start modes. Provides a current and torque “kick” for 0 to 2.0 seconds. This provides greater initial current to develop additional torque to breakaway a high friction load.

- 0–85% of locked rotor torque
- 0–2.0 seconds duration

Starting Characteristics—Kick Start**Soft Stop**

Allows for a controlled stopping of a load. Used when a stop-time that is greater than the coast-to-stop time is desired. Often used with high friction loads where a sudden stop may cause system or load damage.

- Stop time = 0–60 seconds

Starting Characteristics—Soft Stop

Pump Control Option

This option is intended to reduce the potential for water hammer in a centrifugal pump system by using a starting and stopping algorithm developed for pump control. Upon a start command, the speed of the motor is

increased, under the control of the S611 soft starter microprocessor, to achieve a gentle start. After the speed has reached its nominal value, the bypass contactors close and the pump operates as with any other starter.

Upon a stop command, the bypass contactors are opened and the motor speed is decreased in a tapered manner, to gradually slow the flow until the motor is brought to a stop.

Pump Control Option

Edge and Level Sensing Control

Edge or Level Sensing is selected with the Start Control parameter in the Advanced Configuration Menu. Factory default is Level Sensing.

Edge Sensing

Edge sensing requires 120 Vac power be momentarily applied to the Start terminal (with the Permissive terminal 120 Vac) to initiate a start under all conditions. After a stop or fault occurs, the 120 Vac must be reapplied to the start terminal before another start can occur. This control configuration should be used when restarting of the motor after a fault or stop must be supervised manually or as a part of a control scheme. The cycling of 120 Vac power to the Permissive terminal before starting is required regardless of the position of the auto reset parameter.

Level Sensing

Level sensing will enable a motor to restart after a fault is cleared without cycling 120V AC to the Permissive terminal as long as:

- Permissive terminal is supplied with 120 Vac
- The auto reset parameter is set to enabled
- All faults have cleared or have been reset

This control configuration should be used where it is desirable to restart a motor after a fault without additional manual or automatic control. An example of this condition would be on a remote pumping station where it is desirable to automatically restart a pump after a power outage without operator intervention.

Note: If the auto reset feature is used, CAUTION must be exercised to assure that any restart occurs in a safe manner.

Features and Benefits

- The User Interface Module (UI) provides an intuitive, easy-to-use human interface with powerful configuration capabilities to maximize system performance
- Door or device mounted UI enables users to safely configure, commission, monitor and troubleshoot the system at the electrical panel without opening the enclosure door, eliminating the possibility of an arc flash incident
- System operating parameters can be monitored enterprise-wide through a communications network. Increase uptime by providing data for process management and preventive diagnostics
- Run bypass mode greatly reduces internal heating created by the greater power dissipation in the SCRs. Bypass contactors directly connect the motor to the line and improves system efficiency by reducing internal power losses
- Internal solid-state overload protection provides accurate current measurement and trip settings. Sophisticated algorithms solve a series of differential equations that model true motor heating and cooling, resulting in superior motor overload protection while minimizing nuisance trips. Advanced selectable protective features safeguard the motor and system against a variety of system faults
- Internal run bypass contactors and overload protection eliminate the need for additional devices, reducing enclosure sizes minimizing installation and wiring time and reducing overall assembly size and cost
- Wide range of overload FLA settings (50–100% of rated frame current) and a selectable trip class (5–30) offers users the flexibility to fine tune the starter to match specific application requirements
- Variable ramp times and torque control settings provide unlimited starting configurations, allowing for maximum application flexibility
- Kick-start feature enables soft starting of high friction loads
- Soft stop control for applications where an abrupt stop of the load is not acceptable
- Pump control option with sophisticated pump algorithms on both starting and stopping that minimize the pressure surges that cause water hammer. The pump control option will maximize the life of the pump and piping systems while minimizing the downtime caused by system failure
- Six SCRs control all three motor phases, providing smooth acceleration and deceleration performance
- Soft acceleration and deceleration reduces wear on belts, gears, chains, clutches, shafts and bearings
- Reduce the peak inrush current's stress on the power system
- Minimize peak starting torque to diminish mechanical system wear and damage
- 120 Vac control voltage enhances ease of connections
- The S611 lends itself to serviceability. The PCBs and contactors can be replaced in the field

Protective Features

All protective features can be configured, enabled or disabled with the UI or through the communications network.

Motor Overload

The S611 includes electronic overload protection as standard. The overload meets applicable requirements for a motor overload protective device. The overload protects the motor from over heat conditions with the use of sophisticated algorithms that model true motor heating, resulting in superior motor protection and fewer nuisance trips.

The S611 calculates a thermal memory value. A 100% value represents the maximum safe temperature of the motor. When the thermal memory value reaches 100%, an overload trip will occur removing power to the motor.

Upon trip, the S611 stores the calculated motor heating value and will not allow a motor re-start until the motor has cooled. This feature ensures the motor will not be damaged by repeated overload trip, reset and re-start cycles.

The thermal memory value can be monitored through the UI or the communications network. The thermal memory value can be of great use in determining an impending overload trip condition. Alarms can be implemented in the process monitoring system warning of an impending trip before a trip occurs halting the process. Costly system downtime can be avoided.

The trip current is adjusted to match the specific application requirements by entering the motor nameplate full load current rating and trip class. The FLA adjustment includes a 2 to 1 adjustment range. The overload trip class is adjustable from class 5 through class 30. The overload is ambient temperature compensated - meaning its trip characteristics will not vary with changes in ambient temperature. The overload protection can be enabled, disabled, or disabled on start.

Short Circuit

The use of a short circuit protective device in coordination with the S611 is required in branch motor circuits by most electrical codes. Short circuit coordination ratings with both fuses and Eaton molded case circuit breakers are available providing customers with design flexibility. The S611 has short circuit coordination ratings as an open component, an enclosed starter, and in a motor control center. The short circuit ratings can go up to 100KA.

Jam

Excessive current and torque up to locked rotor levels can occur in a jam condition. The condition can result in stress and damage to the motor, load, mechanical system, and the electrical distribution system. Jam protection prevents the stress and damage from a jam during normal run. After the motor is started, a current greater than 300% FLA setting will cause the starter to trip on a jam fault.

Stall

Excessive current and torque up to locked rotor levels can occur in a stall condition. The condition can lead to an overload trip and result in stress and damage to the motor, load, mechanical system, and the electrical distribution system. Stall protection prevents stress and damage to a motor that has not come up to speed, or stalled after the soft start time. The S611 will trip to protect the system in the event that the motor did not get to the rated speed in the defined soft start period. A current greater than 200% FLA at the end of the soft start period will cause the starter to trip on a stall fault.

Pole Over Temperature

High ambient temperatures, extended ramp times and high duty cycle conditions may cause the S611 power pole conductors to reach a temperature that exceeds their thermal rating. The S611 is equipped with sensors that monitor the temperature of the power poles. Over temperature protection occurs if the device's thermal capacity is exceeded. The soft starter will trip in over temperature conditions, preventing device failure.

The device pole temperature value can be monitored through the UI or the communications network. This feature can be of use in determining an impending over temperature trip condition. Alarms can be implemented in the process monitoring system warning of an impending trip before a trip occurs, halting the process. Costly system shutdown can be avoided.

Phase Loss

Loss of a phase can cause a significant increase in the current drawn in the remaining two phases. Phase loss can lead to motor damage before an eventual overload trip occurs. Phase loss is typically an indication of a failure in the electrical distribution system. The S611 will detect a phase loss and trip if any phase current drops below a preset value. The phase loss trip level is adjustable from 0% to 100% of the average of the other two phase levels with an adjustable trip delay of 0.1 to 60 seconds.

Phase Imbalance

Phase current or voltage imbalance can cause a significant increase in the current drawn in the remaining two phases. Phase imbalance can lead to motor damage before an eventual overload trip. Phase imbalance is typically an indication of a failure in the electrical distribution system or the motor. The S611 will detect both current and voltage phase imbalances and trip if any phase becomes imbalanced as compared to the average of the other two phases.

The phase current imbalance trip level is adjustable from 0% to 100% of the average of the current in the other two phases with an adjustable trip delay of 0.1 to 60 seconds.

The phase voltage imbalance trip level is adjustable from 0% to 100% of the average of the voltage in the other two phases with an adjustable trip delay of 0.1 to 60 seconds.

Reset Mode

The S611 can be set up for automatic or manual reset on trip. The manual reset mode requires the operator to physically press the RESET button located on the soft starter. The overload can be manually reset through the UI or through the communications network.

The automatic reset mode allows the soft starter to be automatically reset as soon as the trip condition is no longer present. With the automatic reset mode, after the fault is no longer present, the motor will be restarted as soon as a valid start signal is present.

Phase Reversal

The S611 can determine if the proper line phase sequence is present by default. The device will trip if the line phase sequence is something other than A-B-C. The S611 can be configured to operate under reversed phase conditions (A-C-B).

Shorted SCR Detection

The S611 monitors the operation of the power poles and will trip under a shorted SCR condition.

Open SCR Detection

The S611 monitors the operation of the power poles and will trip under an open SCR condition.

Low Current

Low current conditions can be a result of a loss of load or a failure in the mechanical system. The S611 has low current protection that will trip if the average RMS current falls below a preset value. The low current protection can be programmed as a percent of motor FLA from 0% to 100%.

Low Voltage

Low voltage conditions can result from disturbances in the electrical power distribution system. Low voltage conditions can cause a malfunction and damage to electrical equipment. The S611 has low voltage protection that will trip if the average RMS voltage falls below a preset value. The low voltage protection can be programmed as a percent of nominal voltage from 1% to 99% with a trip delay of 0.1 to 60 seconds.

High Voltage

High voltage conditions can result from disturbances in the electrical power distribution system. High voltage conditions can cause malfunctions or failures of electrical equipment. The S611 has high voltage protection that will trip if the average RMS voltage is greater than a preset value. The high voltage protection can be programmed as a percent of nominal voltage from 101% to 120% with a trip delay of 0.1 to 60 seconds.

Monitoring Capabilities

The S611 has an impressive array of system monitoring capabilities that allow users to access real time process and diagnostic data. This data can be viewed at the device with the UI or through a communications network. Data over a communications network can provide valuable insight into the condition of the equipment and processes. Maintenance and production personnel can

monitor critical operational and maintenance data from a central control station that can be located far away from the production facility. Process data can be monitored to determine system anomalies that may indicate a need for preventive maintenance or an impending failure.

Adjustments made through the communications network can reduce costs by minimizing

the time traveling to the location where the motor controls are located. When faults do occur, real time fault data can assist maintenance in troubleshooting and planning repair resources. Remote reset signals can be given to tripped devices without the need for manual intervention by maintenance personnel.

Average Line Current

Provides the average of the three phase RMS line currents in amps, accurate to within 2%. Current data can be used to indicate a need for maintenance. Increased currents in a fixed load application can indicate a reduction in system efficiencies and performance, signifying system maintenance is due.

Average Pole Current

Provides the average of the three phase RMS pole currents in amps, accurate to within 2%. The pole current is the current through the soft starter. The line and pole current will be identical in in-line applications, and will differ in inside-the-delta applications.

Average Line Current as a % FLA

Provides the average RMS line current as a percentage of the S611 FLA setting.

Three-Phase Line Currents

Provides three RMS phase line currents in amps, accurate to within 2%. Imbalances or changes in the relative phase current to one another can indicate anomalies in the motor or electrical distribution system.

Three-Phase Pole Currents

Provides three RMS phase pole currents in amps, accurate to within 2%. The pole current is the current through the soft starter. The line and pole current will be identical in in-line applications.

Three-Phase Line Voltages

Provides the individual RMS three phase line voltages. Imbalances or changes in the relative phase voltage to one another can indicate anomalies in the motor or electrical distribution system. Voltage can be used to monitor electrical distribution system performance. Warnings, alarms and system actions to low or high voltage conditions can be implemented.

Percent Thermal Memory

Provides the real time calculated thermal memory value. The S611 calculates thermal memory value. A 100% value represents the maximum safe temperature of the motor. When the thermal memory value reaches 100%, an overload trip will occur, removing power to the motor.

The thermal memory value can be of great use in determining an impending overload trip Condition. Alarms can be implemented in the process monitoring system warning of an Impending trip before a trip occurs, halting the process. Costly system downtime can be avoided.

Pole Temperature

Increases in pole temperature are caused by increases in ambient temperature, start/stop times and start duty cycles. Changes in pole temperatures represent a change in system operating conditions. Identifying unexpected operating conditions or changes can prompt maintenance and aid in process evaluation activities.

Power Monitoring

S611 can monitor power and it can be displayed on the UI.

Start Count

Number of starts are stored in the device and can be displayed using field bus.

Diagnostics**Fault Queue**

Current fault and a fault queue containing the last nine system faults can be read through the UI or communications network. Fault identification can minimize troubleshooting time and cost and prevent arc flash incidents. The fault queue can be remotely accessed through a communications network to assist in planning maintenance resources. 30 different faults can be identified by the S611.

Control Status

The S611 provides data that represents system conditions that can be read through the UI or the communications network. This data identifies the status of the system and the control commands the system is requesting of the S611. This can be used for advanced Troubleshooting and system integration activities.

Field Serviceability

In the case of maintenance, the S611 provides easy access and replacement of key components including control board and internal bypass contactors—significantly increasing its service life. If a component ever needs to be replaced, this straightforward operation can be completed by an end-user without the need to call in an outside service technician or engineer. These components are stocked and available for order and quick fulfillment—ensuring your operation continues with minimal downtime.

Standards and Certifications

- IEC 60947-4-2
- UL listed
- CSA certified (3211 06)

**Instructional Leaflets**

- Instruction Manual: MN03902011E
- Quick Start Guide: MN03901003E

S801+/S811+ Solid-State Soft Starters

Furnish as indicated Eaton Class ECS combination starters manufactured by Eaton's electrical sector or approved equal. All starters shall be UL listed and conform to the latest IEC and NEMA Standards and the National Electric Code.

S801+ Soft Starter

Description	Catalog Number
Non-combination	ECS90
Disconnect switch	ECS91
Circuit breaker	ECS92

S811+ Soft Starter

Description	Catalog Number
Non-combination	ECS93
Disconnect switch	ECS94
Circuit breaker	ECS95

General

- All motor starters shall be fully rated SCR devices up to 1000 amperes, with an adjustable ramp time up to 360 seconds as either current limit or torque, an initial torque kick start adjustable from 0–85% and soft stop adjustable up to 60 seconds
- Overload relays shall be solid-state and provide motor protection accuracy to 2%. Phase loss and phase unbalance protection shall be included as standard. The overload relay shall be heaterless and capable of selecting Class 10, 20 or 30 protection. Full-load current settings shall be set with dial settings or control interface module
- 24 Vdc power supplies are supplied as standard and are available with primary ratings from 480–120 Vac and have ratings available from 10–160 watts. Power supplies are equipped with a built-in short-circuit protection
- Control circuit transformers, where specified, shall be encapsulated. Primary and secondary fusing shall be provided. Unless otherwise specified, the secondary shall be 120 Vac. 100 VA is minimum
- Pilot devices, where specified, shall be oiltight and mounted in the flange. Pilot lights shall be transformer type for longer lamp life. Pilot device legend plates shall be engraved aluminum
- Running bypass contactor shall be supplied integral to the soft starter and capable of handling full load amperage
- Option available for full-voltage emergency bypass contactor
- S801+/S811+ shall have built-in communication port to enable control network connectivity
- S811+ shall have a removable digital interface module allowing access to monitor and adjust all parameters. DIM shall be an LCD display
- S801+ shall have a removable control interface module allowing adjustments to Class, FLA, ramp time, stop time, initial torque and protective features

Enclosure

- Enclosures shall be Type 1, 3R, 4, 4X, 7/9 or 12, as scheduled
- The operating mechanism shall be mounted on the flange and shall have positive, non-teasing ON/OFF action. The handle shall be color-coded: red for ON and black for OFF
- The operating handle shall have a means to lock the handle in the OFF position with a minimum of three standard padlocks having 1/4 in diameter shackles
- The enclosure sub-panel shall be easily removed without disturbing the operating mechanism
- Enclosures shall have means for locking the cover

Short-Circuit Protective Device**Disconnect Switch**

- Where specified, a disconnect switch with double break, rotary blades and quick make/quick break action shall be provided
- A line shield with test probe holes for inspection shall be provided. The shield shall be removable

- The switch shall have readily visible blades in the open (OFF) position
- The fusible disconnect switch (through 100A) shall have built-in fuse pullers to make it easier to remove fuses

Circuit Breaker

- Where specified, an adjustable instantaneous trip, magnetic only circuit breaker shall be provided
- A manual push-to-trip button shall be provided to exercise the trip unit

Short-Circuit Rating

- Fusible disconnect switches shall be UL listed for 100,000 amperes available when Class R fuses are used
- Combination starters with adjustable instantaneous trip, magnetic only circuit breakers shall be UL listed for 100,000 amperes available through 480 Vac

Technical Data and Specifications

Soft Starters—S801+

Description	S801+N37N3S	S801+N66N3S	S801+R10N3S	S801+R13N3S
Max. current capacity	37	66	105	135
General Information				
Bypass mechanical lifespan	10M	10M	10M	10M
Insulating voltage Ui	660V	660V	660V	660V
Ramp time range	0.5–180 seconds	0.5–180 seconds	0.5–180 seconds	0.5–180 seconds
Resistance to vibration	3g	3g	3g	3g
Resistance to shock	15g	15g	15g	15g
Electrical Information				
Operating voltage	200–600V	200–600V	200–600V	200–600V

Operation

Overload Functionality

Overtemperature

Protects the device from overheating. Starter will shut down at 100°C.

Stall

Selectable protective feature, unit trips to protect system in event motor can not get to rated speed in the defined ramp period.

Jam

Selectable protective feature, unit trips to prevent damage to motor during normal run.

Phase Loss

Selectable protective feature, trips under voltage loss condition to any phase.

Phase Reversal

Selectable protective feature, trips when phase rotation is something other than A-B-C.

Kick Start

Selectable feature that provides a current "kick" of up to 550% of full load current for 0 to 2.0 seconds. This provides the additional torque required at startup to break free a motor.

Ramp Start

Provides a constant increase in torque to the motor.

Current Limit Start

Limits the maximum current available to the motor during the startup phase.

Soft Stop

Allows for a controlled stopping of a frictional load.

Shorted SCR Detection

Monitors for shorted SCR in the power poles.

Starting Characteristics

Kick Start

Provides an initial boost of current to the motor to help overcome motor inertia and begin motor rotation.

- 0–85% of locked rotor torque
- 0–2.0 seconds duration

Starting Characteristics—Kick Start

Ramp Start

The most commonly used form of soft start. This allows you to set the initial torque value (of the ramp) and then raises it to full voltage conditions.

- Adjustable initial torque = 0–85% of locked rotor torque
- Adjustable ramp time = 0.5–180 seconds

Starting Characteristics—Ramp Start

Current Limit

This mode of soft starting is used when it becomes necessary to limit the maximum starting current due to long start times or to protect the motor.

- Maximum current of 0–85% locked rotor current
- Adjustable ramp time = 0.5–180 seconds

Starting Characteristics—Current Limit

Soft Stop

Used when an extended coast-to-rest period is desired. Often used with high friction loads where a sudden stop may cause system or product damage.

- Stop time = 0–60 seconds

Starting Characteristics—Soft Stop

Technical Data and Specifications

Reduced Voltage Starters

Communications

The S811+ has native Modbus RTU communication capabilities. The S811+ may be connected to a variety of networks, including DeviceNet™, Modbus TCP, EtherNet/IP and PROFIBUS.

The S811+ communication parameters can be configured with the DIM or through the Fieldbus using CH Studio Component Manager. Advanced communication configuration settings provide the system integrator with powerful tools to facilitate system optimization

Communications Reference

Description	Part Number
Modbus TCP Communication Adapter with 120 Vac I/O	C441U
Modbus TCP Communication Adapter with 24 Vdc I/O	C441V
EtherNet/IP Communication Adapter with 120 Vac I/O	C441U
EtherNet/IP Communication Adapter with 24 Vdc I/O	C441V
85–264 Vac input, 24 Vdc output	PSG240E
360–575 Vac input, 24 Vdc output	PSG240F

Operation

Starting and Stopping Modes

The S811+ has a variety of starting and stopping methods to provide superior performance in the most demanding applications. The motor can be started in either voltage ramp start or current limit start mode. Kick start and soft stop are available within both starting modes. The user has the option to configure two independent start ramp profiles to accommodate variations in starting requirements.

Voltage Ramp Start

Provides a voltage ramp to the motor resulting in a constant torque increase. The most commonly used form of soft start, this start mode allows

you to set the initial torque value and the duration of the ramp to full voltage conditions. Bypass contactors close after ramp time.

- Adjustable initial torque
0–85% of locked rotor torque
- Adjustable ramp time
0.5–180 seconds (0.5–360 seconds with the S811+ Premium)

Starting Characteristics—Ramp Start

Current Limit Start

Limits the maximum current available to the motor during the start phase. This mode of soft starting is used when it becomes necessary to limit

the maximum starting current due to long start times or to protect the motor. This start mode allows you to set the maximum starting current as a

percentage of locked rotor current and the duration of the current limit. Bypass contactors close after current limit time.

- Maximum current of 0–85% locked rotor current
- Adjustable ramp time 0.5–180 seconds (0.5–360 seconds with the S811+ Premium)

Starting Characteristics—Current Limit Start

Kick Start

Selectable feature in both voltage ramp start and current limit start modes. Provides a current and torque “kick” for 0 to 2.0 seconds.

This provides greater initial current to develop additional torque to breakaway a high friction load.

- 0–85% of locked rotor torque
- 0–2.0 seconds duration

Starting Characteristics—Kick Start

Soft Stop

Allows for a controlled stopping of a load. Used when a stop-time that is greater than the coast-to-stop

time is desired. Often used with high friction loads where a sudden stop may cause system or load damage.

- Stop time = 0–60 seconds

Starting Characteristics—Soft Stop

Edge and Level Sensing Control**Edge Sensing**

Edge sensing requires +24 Vdc power be momentarily applied to Control Terminal Block Pin 1 (with Terminal P at +24 Vdc) to initiate a start under all conditions. After a stop or fault occurs, the +24 Vdc must be removed, then reapplied to Terminal Pin 1 before another start can occur. This control configuration should be used when restarting of the motor after a fault or stop must be supervised manually or as a part of a control scheme. The cycling of +24 Vdc power to Terminal 1 Pin before starting is required regardless of the position of the auto reset switch on the DIM.

Level Sensing

Level sensing will enable a motor to restart after a fault is cleared without cycling +24 Vdc power to Terminal Pin 1 as long as:

- Terminal Pin P is supplied with +24 Vdc (to start from Control Terminal Block, Terminal Pin 3 must also be enabled)
- The auto reset switch on the DIM is set to enabled
- All faults have been reset

This control configuration should be used where it is desirable to restart a motor after a fault without additional manual or automatic control. An example of this condition would be on a remote pumping station where it is desirable to automatically restart a pump after a power outage without operator intervention.

Note: If the auto reset feature is used, CAUTION must be exercised to ensure that any restart occurs in a safe manner.

Features and Benefits

- Communication capabilities with various protocols
- The Digital Interface Module (DIM) provides an intuitive, easy-to-use human interface with powerful configuration capabilities to maximize system performance
- Door or device mounted DIM enables users to safely configure, commission, monitor and troubleshoot the system at the electrical panel without opening the enclosure door, eliminating the possibility of an arc flash incident
- System operating parameters can be monitored enterprise-wide through a communications network. Increase uptime by providing data for process management and preventive diagnostics
- Run internal bypass mode greatly reduces internal heating created by the greater power dissipation in the SCRs. Bypass contactor directly connects the motor to the line and improves system efficiency by reducing internal power losses
- Internal solid-state overload protection provides accurate current measurement and trip settings. Sophisticated algorithms solve a series of differential equations that model true motor heating and cooling, resulting in superior motor overload protection while minimizing nuisance trips. Advanced selectable protective features safeguard the motor and system against a variety of system faults
- Internal run bypass contactors and overload protection eliminate the need for additional devices, reducing enclosure sizes, minimizing installation and wiring time, and reducing overall assembly size and cost
- Wide range of overload FLA settings (31–100% of rated current) and a selectable trip class (5–30) offers users the flexibility to fine tune the starter to match specific application requirements
- Variable ramp times and torque control settings provide unlimited starting configurations, allowing for maximum application flexibility
- Kick-start feature enables soft starting of high friction loads
- Soft stop control for applications where an abrupt stop of the load is not acceptable
- The S811+ Premium with sophisticated pump control algorithms on both starting and stopping that minimize the pressure surges that cause water hammer. The pump control feature will maximize the life of the pump and piping systems while minimizing the downtime caused by system failure
- Six SCRs control all three motor phases, providing smooth acceleration and deceleration performance
- Soft acceleration and deceleration reduces wear on belts, gears, chains, clutches, shafts and bearings
- Reduce the peak inrush current's stress on the power system
- Manage peak starting torque to diminish mechanical system wear and damage
- 24 Vdc control voltage enhances personnel and equipment safety
- Removable, lockable control terminal block reduces maintenance costs. Also provides the opportunity for OEMs to reduce assembly and test costs by utilizing pre-assembled wire harnesses

Second Start Ramp Profile Capability

A second start ramp profile may be configured for the soft starter. This profile is independent of the primary profile and retains all the parameter options such as start time and initial torques. With a signal at a terminal programmed for this feature, the second profile may be selected by a pushbutton station or a network.

Alarm-No-Trip Functionality

Some applications require the ability to effectively disable most protections with the intent of enabling the RVSS unit to control a motor under the most severe operating conditions characterized by current or voltage imbalances, high or low value deviations, or other fault conditions. This function causes the S811+ to ignore most fault trip conditions and continue operation of the application.

Digital Interface Module (DIM) Cloning

For OEMs or other users that desire to load identical parameter settings into multiple RVSS units, the DIM may be used to extract and duplicate parameter settings from one RVSS and loaded into other units, saving time, effort, and reducing chances for errors while programming.

Motor Wiring Configuration User Selectable Inline or Inside-the-Delta

Mains Motor Wiring Configuration is accomplished by simply selecting the required configuration from a menu. This feature allows adaptability from one configuration to another without any additional programming operations and reduces inventory levels by not having to stock both configurations.

Modbus Native Communications Protocol

Modbus RTU communications is now standard on all S811+ units. This allows users to quickly configure the unit for network communications using a common protocol. Adapters are available for users who prefer to use EtherNet/IP or Modbus TCP protocols.

Programmable Control Terminal Block Functionality

Four programmable terminals on the S811+ enable the user to expand functionality with options such as a second start ramp profile, externally triggered trip or warning functions, analog inputs, and others, in addition to the normal start, stop, reset, and so on, functions.

Protective Features

All protective features can be configured, enabled or disabled with the DIM or through the communications network.

Motor Overload

The S811+ includes electronic overload protection as standard. The overload meets applicable requirements for a motor overload protective device. The overload protects the motor from over heat conditions with the use of sophisticated algorithms that model true motor heating, resulting in superior motor protection and fewer nuisance trips.

The S811+ calculates a thermal memory value based on the heat energy introduced into the motor during the start process. A 100% value represents the maximum safe internal temperature of the motor.

When the thermal memory value reaches 100%, an overload trip will occur removing power to the motor. Upon trip, the S811+ stores the calculated motor heating value and will not allow a motor re-start until the motor has a thermal memory value of less than 100%. This feature ensures the motor will not be damaged by repeated overload trip, reset and re-start cycles.

The thermal memory value can be monitored through the DIM or the communications network. The thermal memory value can be of great use in determining an impending overload trip condition. Alarms can be implemented in the process monitoring system warning of an impending trip before a trip occurs halting the process. Costly system downtime can be avoided.

The trip current is adjusted to match the specific application requirements by entering the motor nameplate full load current rating and trip class. The FLA parameter is adjustable from 32% to 100% of the unit's rated current. The overload trip class is adjustable from class 5 through class 30. The overload is ambient temperature compensated—meaning its trip characteristics will not vary with changes in ambient temperature. The overload protection can be enabled, disabled, or disabled on start.

Short Circuit

The use of a short-circuit protective device in coordination with the S811+ is required in branch motor circuits by most electrical codes. Short-circuit coordination ratings with both fuses and Eaton molded case circuit breakers are available providing customers with design flexibility. The S811+ has short-circuit coordination ratings as an open component, an enclosed starter, and in a motor control center.

External E-Stop

Emergency Stop functionality may be triggered from an external source. Removal of the 24 Vdc signal from a terminal configured for E-Stop will initiate an E-Stop action. The External E-Stop option is useful in applications where it is desirable to accomplish a motor shutdown in the event that an external condition(s) exist that will damage system components and/or product flows or operations.

External Trip

External Trip functionality may be triggered from an external source. Removal of the 24 Vdc signal from a terminal configured for External Trip will initiate an External Trip action. The External Trip option is useful in applications where it is desirable to accomplish a motor stop in the event that an external condition(s) exist that will damage system components and/or product flows or operations.

Fault Warning Functionality

Selected protection parameters may be assigned to provide a Fault Warning instead of a Fault Trip with user adjustable set points. When a Fault Warning condition is detected, the fault condition is reported via the DIM, network connection, or an auxiliary relay configured for this function. The soft starter remains in operation. At such time the fault condition no longer exists, the Fault Warning message will be extinguished.

External Warning

The S811+ will accept a Warning signal from an external source or device. In a fashion similar to the Fault Warning, the fault condition is reported via the DIM, network connection, or an auxiliary relay configured for this function. The soft starter remains in operation. At such time the fault condition no longer exists, the Fault Warning message will be extinguished.

Custom Fault/Warning Auxiliary Relays

Up to three fault and/or warning codes may be selected to operate an auxiliary relay configured to operate when any of these codes are detected. This option enables the user to provide external warnings or fault indications to increase monitoring effectiveness and to provide additional system control.

Motor Power

Motor Power can be not only be monitored, but trip levels can be adjusted to provide indications of system malfunctions or operating discrepancies. Both High and Low Power thresholds can be set to provide Fault Warning or Fault Trip functions. Additionally, fault delays times may be set to up to 60 seconds.

Analog Input

An input control terminal may be configured to accept a 0–20 mA DC signal with range scaling. This feature enables the S811+ to respond to an external device that may be monitoring a critical component or process and provides Fault Trip or Fault Warning capability to protect operating systems and processes.

Start Delay

Three start delay timers are available to enhance motor protection or to provide simple logic functions to coordinate motor control with other devices in the system. The timers will allow delays from 24 Vdc power up, receipt of a valid START command, or a delay in switch from one start ramp profile to another.

Jam

Excessive current and torque up to locked rotor levels can occur in a jam condition. The condition can result in stress and damage to the motor, load, mechanical system, and the electrical distribution system. Jam protection prevents the stress and damage from a jam during normal run. After the motor is in bypass, a current greater than 300% FLA setting will cause the starter to trip on a jam fault.

Stall

Excessive current and torque up to locked rotor levels can occur in a stall condition. The condition can lead to an overload trip and result in stress and damage to the motor, load, mechanical system, and the electrical distribution system. Stall protection prevents stress and damage to a motor that has not come up to speed during the soft start time. The S811+ will trip to protect the system in the event that the motor did not get to the rated speed in the defined soft start period. A current greater than 200% FLA at the end of the soft start period will cause the starter to trip on a stall fault.

Pole Over Temperature

High ambient temperatures, extended ramp times and high duty cycle conditions may cause the S811+ power pole conductors to reach a temperature that exceeds their thermal rating. The S811+ is equipped with sensors that monitor the temperature of the power poles. Over temperature protection occurs if the power pole's thermal capacity is exceeded. The soft starter will trip in over temperature conditions, preventing device failure.

Each power pole temperature value can be monitored through the DIM or the communications network. This feature can be of use in determining an impending over temperature trip condition.

When using a communications network, alarms can be implemented in the process monitoring system warning of an impending trip before the trip occurs, halting the process.

Phase Loss

Loss of a phase can cause a significant increase in the current drawn in the remaining two phases. Phase loss can lead to motor damage before an eventual overload trip occurs. Phase loss is typically an indication of a failure in the electrical distribution system. The S811+ will detect a phase loss and trip if any phase current drops below a preset value. The phase loss trip level is adjustable from 0% to 100% of the average of the other two phase levels with an adjustable trip delay of 0.1 to 60 seconds.

Phase Imbalance

Phase current or voltage imbalance can cause a significant increase in the current drawn in the remaining two phases. Phase imbalance can lead to motor damage before an eventual overload trip. Phase imbalance is typically an indication of a failure in the electrical distribution system or the motor. The S811+ will detect both current and voltage phase imbalances and trip if any phase becomes imbalanced as compared to the average of the other two phases.

The phase current imbalance trip level is adjustable from 0% to 100% of the average of the current in the other two phases with an adjustable trip delay of 0.1 to 60 seconds.

The phase voltage imbalance trip level is adjustable from 0% to 100% of the average of the voltage in the other two phases with an adjustable trip delay of 0.1 to 60 seconds.

Reset Mode

The S811+ can be set up for automatic or manual reset on trip. The manual reset mode requires the operator to physically press the RESET button located on the soft starter. The trip can be manually reset through the DIM or through the communications network. The trip can also be electrically reset by energizing a 24 Vdc input on the control terminal block.

The automatic reset mode allows the soft starter to be automatically reset as soon as the trip condition is no longer present. With the automatic reset mode, after the fault is no longer present, the motor will be restarted as soon as a valid start signal is present.

Phase Reversal

The S811+ can determine if the proper line phase sequence is present by default. The device will trip if the line phase sequence is something other than A-B-C. The S811+ can be configured to operate under reversed phase conditions (A-C-B).

Shorted SCR Detection

The S811+ monitors the operation of the power poles and will trip under a shorted SCR condition.

Open SCR Detection

The S811+ monitors the operation of the power poles and will trip under an open SCR condition.

Low Current

Low current conditions can be a result of a loss of load or a failure in the mechanical system. The S811+ has low current protection that will trip if the average rms current falls below a preset value. The low current protection can be programmed as a percent of motor FLA from 0% to 100%.

Low Voltage

Low voltage conditions can result from disturbances in the electrical power distribution system. Low voltage conditions can cause a malfunction and damage to electrical equipment. The S811+ has low voltage protection that will trip if the average rms voltage falls below a preset value. The low voltage protection can be programmed as a percent of nominal voltage from 1% to 99% with a trip delay of 0.1 to 60 seconds to accommodate short temporary voltage drops during the start process.

High Voltage

High voltage conditions can result from disturbances in the electrical power distribution system. High voltage conditions can cause malfunctions or failures of electrical equipment. The S811+ has high voltage protection that will trip if the average rms voltage is greater than a preset value. The high voltage protection can be programmed as a percent of nominal voltage from 101% to 120% with a trip delay of 0.1 to 60 seconds.

Monitoring Capabilities

The S811+ has an impressive array of system monitoring capabilities that allows users to access real time process and diagnostic data. This data can be viewed at the device with the DIM or through a communications network. Data over a communications network can provide valuable insight into the condition of the equipment and processes. Maintenance and production personnel can monitor critical operational and maintenance data from a central control station that can be located far away from the production facility. Process data can be monitored to determine system anomalies that may indicate a need for preventive maintenance or an impending failure. Adjustments made through the communications network can reduce costs by minimizing the time traveling to the location where the motor controls are located. When faults do occur, real time fault data can assist maintenance in trouble-shooting and planning repair resources. Remote reset signals can be given to tripped devices without the need for manual intervention by maintenance personnel.

Average Line Current

Provides the average of the three-phase rms line currents in amps, accurate to within 2%. Current data can be used to indicate a need for maintenance. Increased currents in a fixed load application can indicate a reduction in system efficiencies and performance, signifying system maintenance is due.

Average Pole Current

Provides the average of the three-phase rms pole currents in amps, accurate to within 2%. The pole current is the current through the soft starter. The line and pole current will be identical in inline applications, and will differ in inside-the-delta applications.

Average Line Current as a % FLA

Provides the average rms line current as a percentage of the S811+ FLA setting.

Three-Phase Line Currents

Provides three rms phase line currents in amps, accurate to within 2%. Imbalances or changes in the relative phase current to one another can indicate anomalies in the motor or electrical distribution system.

Three-Phase Pole Currents

Provides three rms phase pole currents in amps, accurate to within 2%. The pole current is the current through the soft starter. The line and pole current will be identical in in-line applications, and will differ in inside-the-delta applications.

Three-Phase Line Voltages

Provides the individual rms three-phase line voltages. Imbalances or changes in the relative phase voltage to one another can indicate anomalies in the motor or electrical distribution system. Voltage can be used to monitor electrical distribution system performance. Warnings, alarms and system actions to low or high voltage conditions can be implemented.

Percent Thermal Memory

Provides the real time calculated thermal memory value. The S811+ calculates thermal memory value. A 100% value represents the maximum safe internal temperature of the motor. When the thermal memory value reaches 100%, an overload trip will occur, removing power to the motor.

The thermal memory value can be of great use in determining an impending overload trip condition. When using a communications network, alarms can be implemented in the process monitoring system warning of an impending trip before the trip occurs, halting the process. Costly system downtime can be avoided.

DC Control Voltage

Monitors level of the 24 Vdc control voltage. Fluctuations in control voltage can cause component malfunction and failure. System control voltage data can be used to implement warnings, alarms and system actions to low or high voltage conditions.

Pole Temperature

Increases in power pole temperature are caused by increases in ambient temperature, start/stop times and start duty cycles. Changes in pole temperatures represent a change in system operating conditions. Identifying unexpected operating conditions or changes can prompt maintenance and aid in process evaluation activities.

PCB Device Temperature

An increase in printed circuit board (PCB) device temperature is a strong indication of an increase in ambient temperature. High ambient temperature operation can be identified with the device temperature data. Device temperature increases can be due to undersized enclosures, failure of cooling fans or blocked venting. High operating temperatures will reduce the life of all electrical equipment in the enclosure.

Start Count

Start count data can be used to monitor system output, schedule preventative maintenance, identify system anomalies and identify changes in system operation.

Average Line Power

Provides the average of the three-phase line power in kilowatts, accurate to 5%. Power data may be used to monitor power transmitted to the load. Increased power demand may indicate degraded system components or connections. Additionally, such data is useful in determine power utilization in branch circuits consisting of multiple loads.

Power Factor

Provides the three-phase power factor value, accurate to 5%. The power factor of the circuit may be used to identify circuit conditions that may need to be corrected due to low power factor indications. Low circuit power factor can indicate improper or degraded components.

Specifications

Control Power Transformer Selection Procedure

The following steps will assure that the secondary voltage delivered by your transformer will be either 85%, 90% or 95% of the nameplate secondary voltage under maximum inrush conditions, at rated input voltage. A typical selection example based on these steps follows.

Step 1

Calculate the total SEALED (steady state) VA load of your control circuit. This is done by adding the continuous VA requirements of the maximum number of components that will be energized at any given time, including non-inductive as well as inductive components. For Sealed VA data see **Page V10-T17-76.**

Step 2

Calculate the PEAK INRUSH VA of your control circuit. First, analyze the sequence of operation of all components. Then add together the inrush VA ratings of the components that will be energized simultaneously. Next, determine the peak—or maximum simultaneous—inrush VA load that the transformer will “see.” The VA requirements for indicating lights, timers and other non-inductive components which do not have an inrush VA also should be included since they will present a load to the transformer at the time of maximum inrush.

Step 3

Calculate the TRANSFORMER SELECTION INRUSH VA. Use the following formula:

Selection Inrush =

$$\sqrt{(VA \text{ Sealed})^2 + (VA \text{ Inrush})^2}$$

Note: Transformer selection inrush VA also can be determined by adding the inrush VA and sealed VA arithmetically, but this usually results in an oversized transformer.

Step 4

Determine the correct transformer NAMEPLATE VA RATING. Refer to the Inrush/Regulation Data table: If the line supply to the transformer is fairly stable (does not vary more than 5%), use the 90% secondary voltage column—the 90% column is most commonly used. If the line supply voltage varies up to 10%, use the 95% voltage regulation column. To determine the correct VA transformer rating, go down the column until you arrive at the inrush VA rating closest to, but not less than, the Transformer Selection Inrush VA calculated in Step 3. The left hand column of the table will give the corresponding transformer NAMEPLATE VA RATING.

Inrush/Regulation Data

Transformer VA Rating 55°C	Inrush VA—40% Power Factor		
	At 95% Secondary Voltage	At 90% Secondary Voltage	At 85% Secondary Voltage
60	137	185	227
95	242	329	409
105	294	407	512
180	592	842	1071
225	929	1312	1663
275	1271	1801	2288
320	1581	2224	2816
380	2124	3048	3895
550	3196	4604	5896
850	5500	7914	10,141
1100	8382	12,067	15,477
1500	11,100	16,066	21,032
2000	21,820	24,356	41,100
3000	29,123	32,770	59,997
5000	74,595	111,000	145,000
7500	104,000	162,000	219,000
10,000	111,000	166,000	237,000

Note: When evaluating supply-line stability, remember that supply-line voltage drop frequently is associated with motor-starting inrush current. When motors and motor controls are connected to a common

feeder, the controls will experience a momentary voltage dip when the motor starts. This reduces the control transformer voltage supplied to the motor starting contactor and may cause the contactor to chatter or drop out.

Selection Example

Steps 1 and 2

By following Steps 1 and 2 described in column one at left, analysis of the control

circuits shows the following sealed VA and inrush VA data:

Example Data

Qty.	Description	Sealed VA	Inrush VA
3	Three-pole Size 1 contactors	60	309
2	Three-pole Size 3 contactors	99	780
4	Relays	88	620
2	Electronic timers	36	36
4	Indicating lights	28	28
Totals		311	1773

Step 3

Following Step 3 in column two at left, the Transformer Selection Inrush VA is calculated at 1773 VA.

Transformer Selection VA

$$\begin{aligned}
 &= \sqrt{(VA \text{ Sealed})^2 + (VA \text{ Inrush})^2} \\
 &= \sqrt{(311)^2 + (1773)^2} \\
 &= \sqrt{3,240,250} \\
 &= 1800
 \end{aligned}$$

Steps 4 and 5

Following Steps 3 and 4 at left, the Inrush/Regulation Data Chart is then consulted to find the correction nameplate VA size of the transformer. Under the 90% Secondary Voltage column, we find that a 320 VA transformer will deliver 2224 VA, amply covering circuit demands of 1800 Inrush VA. Checking this selection against the requirements of 311 VA sealed, we confirm that a 320 VA transformer will be sufficient.

Component VA Table

	Inrush VAR	Watts	VA	Sealed VAR	Watts	VA

Note

^① Intermittent duty coil.

Ampere ratings of motors vary somewhat, depending upon the type of motor. The values given below are for drip-proof, Class B insulated (T Frame) where available, 1.15 service factor, NEMA Design B motors. These values represent an average

full load motor current that was calculated from the motor performance data published by several motor manufacturers. In the case of high torque squirrel cage motors, the ampere ratings will be at least 10% greater than the values given below.

Caution—These average ratings could be high or low for a specific motor and therefore heater coil selection on this basis always involves risk. For fully

reliable motor protection, select heater coils on the basis of full load current rating as shown on the motor nameplate.

Ampere Ratings of Three-Phase, 60 Hz, AC Induction Motor

Selling Policy (Supersedes Selling Policy 25-000, dated November 1, 2008)

Terms and Conditions of Sale

The Terms and Conditions of Sale set forth herein, and any supplements which may be attached hereto, constitute the full and final expression of the contract for the sale of products or services (hereinafter referred to as Product(s) or Services by Eaton Corporation (hereinafter referred to as Seller) to the Buyer, and supersedes all prior quotations, purchase orders, correspondence or communications whether written or oral between the Seller and the Buyer. Notwithstanding any contrary language in the Buyer's purchase order, correspondence or other form of acknowledgment, Buyer shall be bound by these Terms and Conditions of Sale when it sends a purchase order or otherwise indicates acceptance of this contract, or when it accepts delivery from Seller of the Products or Services.

THE CONTRACT FOR SALE OF THE PRODUCTS OR SERVICES IS EXPRESSLY LIMITED TO THE TERMS AND CONDITIONS OF SALE STATED HEREIN. ANY ADDITIONAL OR DIFFERENT TERMS PROPOSED BY BUYER ARE REJECTED UNLESS EXPRESSLY AGREED TO IN WRITING BY SELLER. No contract shall exist except as herein provided.

Complete Agreement

No amendment or modification hereto nor any statement, representation or warranty not contained herein shall be binding on the Seller unless made in writing by an authorized representative of the Seller. Prior dealings, usage of the trade or a course of performance shall not be relevant to determine the meaning of this contract even though the accepting or acquiescing party had knowledge of the nature of the performance and opportunity for objection.

Quotations

Written quotations are valid for 30 days from its date unless otherwise stated in the quotation or terminated sooner by notice.

Verbal quotations, unless accepted, expire the same day they are made.

A complete signed order must be received by Seller within 20 calendar days of notification of award, otherwise the price and shipment will be subject to re-negotiation.

Termination and Cancellation

Products

Any order may be terminated by the Buyer only by written notice and upon payment of reasonable termination charges, including all progress billings and all incurred direct manufacturing costs.

Services

Any order may be terminated by the Buyer only by written notice and upon payment of reasonable termination charges including all costs plus profit.

Seller shall have the right to cancel any order at any time by written notice if Buyer breaches any of the terms hereof, becomes the subject of any proceeding under state or federal law for the relief of debtors, or otherwise becomes insolvent or bankrupt, generally does not pay its debts as they become due or makes an assignment for the benefit of creditors.

Appendix 1—General Terms and Conditions of Sale

Effective Date: November 1, 2017

Prices

All prices are subject to change without notice. In the event of a price change, the effective date of the change will be the date of the new price or discount sheet, letter or telegram. All quotations made or orders accepted after the effective date will be on the new basis. For existing orders, the price of the unshipped portion of an order will be the price in effect at time of shipment.

Price Policy—Products and Services

When prices are quoted as firm for quoted shipment, they are firm provided the following conditions are met:

1. The order is released with complete engineering details.
2. Shipment of Products are made, and Services purchased are provided within the quoted lead time.
3. When drawings for approval are required for any Products, the drawings applicable to those Products must be returned within 30* calendar days from the date of the original mailing of the drawings by Seller. The return drawings must be released for manufacture and shipment and must be marked "APPROVED" or "APPROVED AS NOTED." Drawing re-submittals which are required for any other reason than to correct Seller errors will not extend the 30-day period.

* 60 days for orders through contractors to allow time for their review and approval before and after transmitting them to their customers.

If the Buyer initiates or in any way causes delays in shipment, provision of Services or return of approval drawings beyond the periods stated above, the price of the Products or Services will be increased 1% per month or fraction thereof up to a maximum of 18 months from the date of the Buyer's order. For delays resulting in shipment or provision of Services beyond 18 months from the date of the Buyer's order, the price must be renegotiated.

Price Policy—BLS

Refer to Price Policy 25-050.

Minimum Billing

Orders less than \$1,000 will be assessed a shipping and handling charge of 5% of the price of the order, with a minimum charge of \$25.00 unless noted differently on Product discount sheets.

Taxes

The price does not include any taxes. Buyer shall be responsible for the payment of all taxes applicable to, or arising from the transaction, the Products, its sale, value, or use, or any Services performed in connection therewith regardless of the person or entity actually taxed.

Terms of Payment

Products

Acceptance of all orders is subject to the Buyer meeting Seller's credit requirements. Terms of payment are subject to change for failure to meet such requirements. Seller reserves the right at any time to demand full or partial payment before proceeding with a contract of sale as a result of changes in the financial condition of the Buyer. Terms of Payment are either Net 30 days from the date of invoice of each shipment or carry a cash discount based on Product type. Specific payment terms for Products are outlined in the applicable Product discount schedules.

Services

Terms of payment are net within 30 days from date of invoice for orders amounting to less than \$50,000.00.

Terms of payment for orders exceeding \$50,000.00 shall be made according to the following:

1. Twenty percent (20%) of order value with the purchase order payable 30 days from date of invoice.
2. Eighty percent (80%) of order value in equal monthly payments over the performance period payable 30 days from date of invoice.

Except for work performed (i) under a firm fixed price basis or (ii) pursuant to terms of a previously priced existing contract between Seller and Buyer, invoices for work performed by Seller shall have added and noted on each invoice a charge of 3% (over and above the price of the work) which is related to Seller compliance with present and proposed environmental, health, and safety regulations associated with prescribed requirements covering hazardous materials management and employee training, communications, personal protective equipment, documentation and record keeping associated therewith.

Adequate Assurances

If, in the judgment of Seller, the financial condition of the Buyer, at any time during the period of the contract, does not justify the terms of payment specified, Seller may require full or partial payment in advance.

Delayed Payment

If payments are not made in accordance with these terms, a service charge will, without prejudice to the right of Seller to immediate payment, be added in an amount equal to the lower of 1.5% per month or fraction thereof or the highest legal rate on the unpaid balance.

Freight

Freight policy will be listed on the Product discount sheets, or at option of Seller one of the following freight terms will be quoted.

F.O.B.—P/S—Frt./Ppd. and Invoiced

Products are sold F.O.B. point of shipment freight prepaid and invoiced to the Buyer.

F.O.B.—P/S—Frt./Ppd. and Allowed

Products sold are delivered F.O.B. point of shipment, freight prepaid and included in the price.

F.O.B. Destination—Frt./Ppd. and Allowed

At Buyer's option, Seller will deliver the Products F.O.B. destination freight prepaid and 2% will be added to the net price.

The term "freight prepaid" means that freight charges will be prepaid to the accessible common carrier delivery point nearest the destination for shipments within the United States and Puerto Rico unless noted differently on the Product discount sheets. For any other destination, contact Seller's representative.

Shipment and Routing

Seller shall select the point of origin of shipment, the method of transportation, the type of carrier equipment and the routing of the shipment.

If the Buyer specifies a special method of transportation, type of carrier equipment, routing, or delivery requirement, Buyer shall pay all special freight and handling charges.

When freight is included in the price, no allowance will be made in lieu of transportation if the Buyer accepts shipment at factory, warehouse, or freight station or otherwise supplies its own transportation.

Risk of Loss

Risk of loss or damage to the Products shall pass to Buyer at the F.O.B. point.

Concealed Damage

Except in the event of F.O.B. destination shipments, Seller will not participate in any settlement of claims for concealed damage.

When shipment has been made on an F.O.B. destination basis, the Buyer must unpack immediately and, if damage is discovered, must:

1. Not move the Products from the point of examination.
2. Retain shipping container and packing material.
3. Notify the carrier in writing of any apparent damage.
4. Notify Seller representative within 72 hours of delivery.
5. Send Seller a copy of the carrier's inspection report.

Witness Tests/Customer Inspection

Standard factory tests may be witnessed by the Buyer at Seller's factory for an additional charge calculated at the rate of \$2,500 per day (not to exceed eight (8) hours) per Product type. Buyer may final inspect Products at the Seller's factory for \$500 per day per Product type.

Witness tests will add one (1) week to the scheduled shipping date. Seller will notify Buyer fourteen (14) calendar days prior to scheduled witness testing or inspection. In the event Buyer is unable to attend, the Parties shall mutually agree on a rescheduled date. However, Seller reserves the right to deem the witness tests waived with the right to ship and invoice Products.

Held Orders

For any order held, delayed or rescheduled at the request of the Buyer, Seller may, at its sole option (1) require payment to be based on any reasonable basis, including but not limited to the contract price, and any additional expenses, or cost resulting from such a delay; (2) store Products at the sole cost and risk of loss of the Buyer; and/ or (3) charge to the Buyer those prices under the applicable price policy. Payment for such price, expenses and costs, in any such event, shall be due by Buyer within thirty (30) days from date of Seller's invoice. Any order so held delayed or rescheduled beyond six (6) months will be treated as a Buyer termination.

Drawing Approval

Seller will design the Products in line with, in Seller's judgment, good commercial practice. If at drawing approval Buyer makes changes outside of the design as covered in their specifications, Seller will then be paid reasonable charges and allowed a commensurate delay in shipping date based on the changes made.

Drawing Re-Submittal

When Seller agrees to do so in its quotation, Seller shall provide Buyer with the first set of factory customer approval drawing(s) at Seller's expense. The customer approval drawing(s) will be delivered at the quoted delivery date. If Buyer requests drawing changes or additions after the initial factory customer approval drawing(s) have been submitted by Seller, the Seller, at its option, may assess Buyer drawing charges. Factory customer approval drawing changes required due to misinterpretation by Seller will be at Seller's expense. Approval drawings generated by Bid Manager are excluded from this provision.

Warranty

Warranty for Products

Seller warrants that the Products manufactured by it will conform to Seller's applicable specifications and be free from failure due to defects in workmanship and material for one (1) year from the date of installation of the Product or eighteen (18) months from the date of shipment of the Product, whichever occurs first.

In the event any Product fails to comply with the foregoing warranty, Seller will, at its option, either (a) repair or replace the defective Product, or defective part or component thereof, F.O.B. Seller's facility freight prepaid, or (b) credit Buyer for the purchase price of the Product. All warranty claims shall be made in writing.

Seller requires all non-conforming Products be returned at Seller's expense for evaluation unless specifically stated otherwise in writing by Seller.

This warranty does not cover failure or damage due to storage, installation, operation or maintenance not in conformance with Seller's recommendations and industry standard practice or due to accident, misuse, abuse or negligence. This warranty does not cover reimbursement for labor, gaining access, removal, installation, temporary power or any other expenses, which may be incurred in connection with repair or replacement.

This warranty does not apply to equipment not manufactured by Seller. Seller limits itself to extending the same warranty it receives from the supplier.

Appendix 1—General Terms and Conditions of Sale

Effective Date: November 1, 2017

Extended Warranty for Products

If requested by the Buyer and specifically accepted in writing by Seller, the foregoing standard warranty for Products will be extended from the date of shipment for the period and price indicated below:

- 24 months—2% of Contract Price
- 30 months—3% of Contract Price
- 36 months—4% of Contract Price

Special Warranty (In and Out) for Products

If requested by the Buyer and specifically accepted in writing by Seller, Seller will, during the warranty period for Products, at an additional cost of 2% of the contract price, be responsible for the direct cost of:

1. Removing the Product from the installed location.
2. Transportation to the repair facility and return to the site.
3. Reinstallation on site.

The total liability of Seller for this Special Warranty for Products is limited to 50% of the contract price of the particular Product being repaired and excludes expenses for removing adjacent apparatus, walls, piping, structures, temporary service, etc.

Warranty for Services

Seller warrants that the Services performed by it hereunder will be performed in accordance with generally accepted professional standards.

The Services, which do not so conform, shall be corrected by Seller upon notification in writing by the Buyer within one (1) year after completion of the Services.

Unless otherwise agreed to in writing by Seller, Seller assumes no responsibility with respect to the suitability of the Buyer's, or its customer's, equipment or with respect to any latent defects in equipment not supplied by Seller. This warranty does not cover damage to Buyer's, or its customer's, equipment, components or parts resulting in whole or in part from improper maintenance or operation or from their deteriorated condition. Buyer will, at its cost, provide Seller with unobstructed access to the defective Services, as well as adequate free working space in the immediate vicinity of the defective Services and such facilities and systems, including, without limitation, docks, cranes and utility disconnects and connects, as may be necessary in order that Seller may perform its warranty obligations. The conducting of any tests shall be mutually agreed upon and Seller shall be notified of, and may be present at, all tests that may be made.

Warranty for Power Systems Studies

Seller warrants that any power systems studies performed by it will conform to generally accepted professional standards. Any portion of the study, which does not so conform, shall be corrected by Seller upon notification in writing by the Buyer within six (6) months after completion of the study. All warranty work shall be performed in a single shift straight time basis Monday through Friday. In the event that the study requires correction of warranty items on an overtime schedule, the premium portion of such overtime shall be for the Buyer's account.

Limitation on Warranties for Products, Services and Power Systems Studies

THE FOREGOING WARRANTIES ARE EXCLUSIVE EXCEPT FOR WARRANTY OF TITLE. SELLER DISCLAIMS ALL OTHER WARRANTIES INCLUDING ANY IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

CORRECTION OF NON-CONFORMITIES IN THE MANNER AND FOR THE PERIOD OF TIME PROVIDED ABOVE SHALL CONSTITUTE SELLER'S SOLE LIABILITY AND BUYER'S EXCLUSIVE REMEDY FOR FAILURE OF SELLER TO MEET ITS WARRANTY OBLIGATIONS, WHETHER CLAIMS OF THE BUYER ARE BASED IN CONTRACT, IN TORT (INCLUDING NEGLIGENCE OR STRICT LIABILITY), OR OTHERWISE.

Asbestos

Federal Law requires that building or facility owners identify the presence, location and quantity of asbestos containing material (hereinafter "ACM") at work sites. Seller is not licensed to abate ACM. Accordingly, for any contract which includes the provision of Services, prior to (i) commencement of work at any site under a specific Purchase Order, (ii) a change in the work scope of any Purchase Order, the Buyer will certify that the work area associated with the Seller's scope of work includes the handling of Class II ACM, including but not limited to generator wedges and high temperature gaskets which include asbestos materials. The Buyer shall, at its expense, conduct abatement should the removal, handling, modification or reinstallation, or some or all of them, of said Class II ACM be likely to generate airborne asbestos fibers; and should such abatement affect the cost of or time of performance of the work, then Seller shall be entitled to an equitable adjustment in the schedule, price and other pertinent affected provisions of the contract.

Compliance with Nuclear Regulation

Seller's Products are sold as commercial grade Products not intended for application in facilities or activities licensed by the United States Nuclear Regulatory Commission for atomic purposes. Further certification will be required for use of the Products in any safety-related application in any nuclear facility licensed by the U.S. Nuclear Regulatory Commission.

Returning Products

Authorization and shipping instructions for the return of any Products must be obtained from Seller before returning the Products.

When return is occasioned due to Seller error, full credit including all transportation charges will be allowed.

Product Notices

Buyer shall provide the user (including its employees) of the Products with all Seller supplied Product notices, warnings, instructions, recommendations, and similar materials.

Force Majeure

Seller shall not be liable for failure to perform or delay in performance due to fire, flood, strike or other labor difficulty, act of God, act of any governmental authority or of the Buyer, riot, embargo, fuel or energy shortage, car shortage, wrecks or delays in transportation, or due to any other cause beyond Seller's reasonable control. In the event of delay in performance due to any such cause, the date of delivery or time for completion will be extended by a period of time reasonably necessary to overcome the effect of such delay.

Liquidated Damages

Contracts which include liquidated damage clauses for failure to meet shipping or job completion promises are not acceptable or binding on Seller, unless such clauses are specifically accepted in writing by an authorized representative of the Seller at its headquarters office.

Patent Infringement

Seller will defend or, at its option, settle any suit or proceeding brought against Buyer, or Buyer's customers, to the extent it is based upon a claim that any Product or part thereof, manufactured by Seller or its subsidiaries and furnished hereunder, infringes any United States patent, other than a claim of infringement based upon use of a Product or part thereof in a process, provided Seller is notified in reasonable time and given authority, information and assistance (at Seller's expense) for the defense of same. Seller shall pay all legal and court costs and expenses and court-assessed damages awarded therein against Buyer resulting from or incident to such suit or proceeding. In addition to the foregoing, if at any time Seller determines there is a substantial question of infringement of any United States patent, and the use of such Product is or may be enjoined, Seller may, at its option and expense: either (a) procure for Buyer the right to continue using and selling the Product; (b) replace the Product with non-infringing apparatus; (c) modify the Product so it becomes non-infringing; or (d) as a last resort, remove the Product and refund the purchase price, equitably adjusted for use and obsolescence. In no case does Seller agree to pay any recovery based upon its Buyer's savings or profit through use of Seller's Products whether the use be special or ordinary. The foregoing states the entire liability of Seller for patent infringement.

The preceding paragraph does not apply to any claim of infringement based upon: (a) any modification made to a Product other than by Seller; (b) any design and/or specifications of Buyer to which a Product was manufactured; or (c) the use or combination of Product with other products where the Product does not itself infringe. As to the above-identified claim situations where the preceding paragraph does not apply, Buyer shall defend and hold Seller harmless in the same manner and to the extent as Seller's obligations described in the preceding paragraph. Buyer shall be responsible for obtaining (at Buyer's expense) all license rights required for Seller to be able to use software products in the possession of Buyer where such use is required in order to perform any Service for Buyer.

With respect to a Product or part thereof not manufactured by Seller or its subsidiaries, Seller will attempt to obtain for Buyer, from the supplier(s), the patent indemnification protection normally provided by the supplier(s) to customers.

Compliance with OSHA

Seller offers no warranty and makes no representation that its Products comply with the provisions or standards of the Occupational Safety and Health Act of 1970, or any regulation issued thereunder. In no event shall Seller be liable for any loss, damage, fines, penalty or expenses arising under said Act.

Limitation of Liability

THE REMEDIES OF THE BUYER SET FORTH IN THIS CONTRACT ARE EXCLUSIVE AND ARE ITS SOLE REMEDIES FOR ANY FAILURE OF SELLER TO COMPLY WITH ITS OBLIGATIONS HEREUNDER.

NOTWITHSTANDING ANY PROVISION IN THIS CONTRACT TO THE CONTRARY, IN NO EVENT SHALL SELLER BE LIABLE IN CONTRACT, IN TORT (INCLUDING NEGLIGENCE OR STRICT LIABILITY) OR OTHERWISE FOR DAMAGE TO PROPERTY OR EQUIPMENT OTHER THAN PRODUCTS SOLD HEREUNDER, LOSS OF PROFITS OR REVENUE, LOSS OF USE OF PRODUCTS, COST OF CAPITAL, CLAIMS OF CUSTOMERS OF THE BUYER OR ANY SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES WHATSOEVER, REGARDLESS OF WHETHER SUCH POTENTIAL DAMAGES ARE FORESEEABLE OR IF SELLER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

THE TOTAL CUMULATIVE LIABILITY OF SELLER ARISING FROM OR RELATED TO THIS CONTRACT WHETHER THE CLAIMS ARE BASED IN CONTRACT, IN TORT (INCLUDING NEGLIGENCE OR STRICT LIABILITY) OR OTHERWISE, SHALL NOT EXCEED THE PRICE OF THE PRODUCT OR SERVICES ON WHICH SUCH LIABILITY IS BASED.
