Compatibility Coding

Color-coded product mounting dimensions throughout this guide allow for visual matching of lugs and grounding kits to the mounting locations on busbars. From page to page, matching color indicates compatibility.

Standards

ANSI/TIA-607-B; September 2011

- Generic Telecommunications Bonding and Grounding (Earthing) for Customer Premises
- Standards and Publications are adopted by TIA in accordance with the American National Standards Institute (ANSI) patent policy

ANSI/NECA/BICSI 607-2011; 2011

- Standard for telecommunications bonding and grounding planning and installation methods for commercial buildings
- National Electrical Installation Standards (NEIS™) are designed to improve communication among specifiers, purchasers, and suppliers of electrical construction services. This standard has been prepared by BICSI®/NECA® under joint jurisdiction of BICSI and NECA, and approved by consensus ballot in accordance with the requirements of ANSI. This publication is intended to comply with the edition of the National Electrical Code (NEC®) in effect at the time of publication.

NEC Article 250

- This article covers general grounding and bonding requirements and practices within electrical installations

The above standards differ; refer to the specified standard to ensure compliance for product selection and installation.

Irreversible Connectors

Irreversible Busbar and I-Beam Connectors provide a high level of bonding security and are as permanent as welding.

Typical Busbar Connector Applications

- TGB to GE
- TGB to TBB
- TGB to beam steel
- TGB to TGB
- TGB to mesh BN

Tooling Best Practices

HPAT600LI and HPAT750LI	Lugs: Insert and align lug in the stationary die. Press and hold forward button until pressure release resets, use reverse button to draw back die. C-Tap and H-Tap: Use VELCRO®, string or a plastic cable tie to hold wires in place while applying pressure.	
HMRC840 and HMD7	Lugs: Insert and align lug in dies, gently close handles to put a light hold on the lug before inserting the stripped copper wire into the lug. By holding the lug vertically (barrel up), gravity will keep the ground wire in place while applying pressure. C-Tap: Use VELCRO®, string or a plastic cable tie to hold wires in place while applying pressure.	
HOUR840	Lugs: Insert and Align lug in dies, gently squeeze handles a few times to put a light hold on the lug before inserting the stripped copper wire into the Lug.
