HUBBELL POWER SYSTEMS, INC.

TERMS & CONDITIONS OF SALES

These terms and conditions of sales ("terms and conditions") apply to the purchase by Buyer of any and all Hubbell Power Systems, Inc. ("HPS") products. HPS hereby gives notice of its rejection to any different or additional terms and conditions other than as stated herein. Buyer's acceptance of the provisions of HPS's terms and conditions as recited herein shall be conclusively presumed upon Buyer's receipt of the product(s), or if no written objection is received by HPS within fifteen (15) days from the date on HPS's order acknowledgment, whichever event shall first occur.

PRICING

Refer to appropriate Price Schedule, unless otherwise quoted.

TERMS

Payment terms are net 30 days. Invoices will be dated the day of shipment. A service charge of 1-1/2% per month or, if such rate exceeds the maximum lawful rate, the maximum lawful rate shall be assessed on all past due accounts and shall be payable on demand.

QUOTATIONS

Unless otherwise stated in writing, HPS' quotations are subject to acceptance by the Buyer within thirty (30) days from the date of issue.

SALES AND SIMILAR TAXES

Prices do not include any sales, use, excise or similar taxes. Consequently, in addition to the price specified herein, the amount of any present or future sales, use, excise or other similar tax applicable to the sale or use of the equipment hereunder, shall be paid by the Buyer, or in lieu thereof the Buyer shall provide HPS with a tax exemption certificate acceptable to the taxing authorities.

ACCEPTANCE OF ORDERS

All orders are subject to final acceptance by HPS. Any other terms proposed by Buyer are rejected unless expressly accepted in writing. Orders shall be deemed to be executed in the State of Missouri and shall be construed and performed in accordance with the laws of that State. Acceptance of any order is subject to availability of product and the ability of HPS to deliver. Orders will be billed at prices in effect at time of shipment unless otherwise agreed. Unless otherwise stated in writing, HPS reserves the right to ship plus or minus 10% of specified quantity for special products that are made to order.

SALES BY AGENTS

Sales by agents or through overseas representatives shall be at prices, terms and conditions of sale specified by HPS. All invoices will be issued by and payment remitted to HPS.

DELAY

HPS will use reasonable efforts to meet shipment or delivery dates specified by HPS, but such dates are estimates only. In no event shall be liable for any delay or nondelivery if caused directly or indirectly by Acts of God, fire, flood, strike or lockout or other labor dispute, accident, civil commotion, riot, war, governmental regulation or order, whether or not it later proves to be invalid, or from any other cause or causes (whether or not similar to any of the foregoing) beyond HPS's control. In no case will HPS be liable for loss of profits or any special or consequential damages on account of any delay in delivery or nondelivery whether or not excused hereunder.

SHIPPING DEFERMENT

Buyer requests for shipping deferment must be approved by HPS and are subject to price negotiation.

LIMITED WARRANTY AND LIMITATION OF LIABILITY

HPS warrants to Buyer that the products sold will be free of defects in workmanship or material for a period of one (1) year (or as otherwise specified) from the date of original shipment by HPS when stored, installed, operated or maintained in accordance with recommendations of HPS and standard industry practice and when used under proper and normal use. HPS shall in no event be responsible or liable for modifications, alterations, misapplication or repairs made to its products by Buyer or others, or for damage caused thereto by negligence, accident or improper use by Buyer or others. This warranty does not include reimbursement for the expenses of labor, transportation, removal or reinstallation of the products. This warranty shall run only to the first Buyer of a product from HPS, from HPS' Buyer, or from an original equipment manufacturer reselling HPS' product, and is non-assignable and non-transferable and shall be of no force and effect if asserted by any person other than such first Buyer.

APPLICATION: HPS does not warrant the accuracy of and results from product or system performance recommendations resulting from any engineering analysis or study. This applies regardless of whether a charge is made for the recommendation, or if it is provided free of charge. Responsibility for selection of the proper product of application rests solely 2 Effective January 1, 2011 with the Buyer. In the event of errors or inaccuracies determined to be caused by HPS, its liability will be limited to the reperformance of any such analysis or study.

BUYER INSPECTIONS: Tests, inspections and acceptance of all material must be made at the factory. Buyer's inspectors are welcome at the factories and are provided with the necessary facilities for carrying out their work. Name and phone number of who should be contacted for inspection should be given to HPS no later than two weeks prior to scheduled shipment date.

DISCLAIMER OF WARRANTY: THE FOREGOING WARRANTY IS EXCLUSIVE AND IN LIEU OF ALL OTHER WARRANTIES WHETHER WRITTEN, ORAL, EXPRESSED OR IMPLIED. THERE ARE NO WARRANTIES OF MERCHANTABILITY OR FITNESS OF ANY PRODUCT FOR A PARTICULAR PURPOSE.

EXCLUSIVE REMEDY: Any claim by Buyer that a product is defective or non-conforming shall be deemed waived by Buyer unless submitted to HPS in writing within thirty (30) days from the date Buyer discovered, or by reasonable inspection should have discovered the alleged defect or non-conformity. Any warranty claim must be brought within one year of discovery of the alleged defect or non-conformity. Upon prompt written notice by the Buyer that a product is defective or non-conforming, HPS' liability shall be limited to repairing or replacing the product, at HPS' option.

LIMITATION OF LIABILITY: IN NO EVENT AND UNDER NO CIRCUMSTANCES SHALL HPS BE LIABLE TO BUYER OR TO ANY OTHER PERSON FOR ANY INDIRECT, SPECIAL, CONSEQUENTIAL OR INCIDENTAL LOSSES OR DAMAGES, INCLUDING, WITHOUT LIMITATION, DAMAGE TO OR LOSS OF USE OF ANY PRODUCT, LOST SALES, OR PROFITS, OR DELAY OR FAILURE TO PERFORM THIS WARRANTY OBLIGATION, OR CLAIMS OF THIRD PARTIES AGAINST PURCHASER, ARISING OUT OF OR IN CONNECTION WITH THE SALE, INSTALLATION, USE OF, INABILITY TO USE, OR THE REPAIR OR REPLACEMENT OF, HPS' PRODUCTS. As stated herein, the term "person" shall include without limitation, any individual proprietorship, partnership, corporation or entity.

FREIGHT ALLOWANCE AND F.O.B. POINT

All shipments are F.O.B. origin. Risk of loss and title of products shall pass to Buyer upon delivery to the designated carrier. Freight is prepaid and allowed on all HPS shipments of products with a net order value of \$5,000 and above to destinations within the Continental U.S.A and Canada, with the exception of USCO brand products. Freight is prepaid and allowed on all shipments of USCO brand products with a net order value of \$20,000 and above. An 8% shipping and handling charge will be added to all standard shipments under the minimum net order value. Customer expedited orders will be billed at actual freight cost plus \$50.00 handling. Shipments to Alaska and Hawaii are F.O.B. Pacific Coast docks, collect beyond. Tool trailers will be F.O.B. HPS' dock – no freight allowed.

HPS reserves the right to route all qualified freight allowed shipments via least expensive surface route within the Continental United States and Canada. Buyer will assume all charges for transportation specified via more expensive means. Acceptance of a specified routing does not constitute a guarantee of ship date, transit time or arrival date. HPS will not be responsible for any cartage or storage charges at destination.

HPS' responsibility for exception-free delivery ceases when the transportation company receives shipment in good condition. Claims for loss or damage must be reported directly to the carrier. HPS's willingness to assist does not indicate liability for claim or replacement.

PARTIAL RELEASE

If an order has multiple releases specified by the Buyer, each release will be treated as individual orders, relative to freight allowance and minimum billing.

BACK ORDERS

Back orders that are the responsibility of HPS will be shipped F.O.B. factory or point of shipment with freight prepaid and allowed via the most cost effective method, providing the original order qualified for freight allowance.

MINIMUM BILLING

Standard Orders — \$750 net per order. Tools — \$100 net per order. Parts — \$100 net per order.

ORDER ADD-ON POLICY

HPS' "Add-On" policy allows you to add items to an existing unshipped order for up to fifteen (15) days from the entry date of the original order. The minimum value for added products is \$250. Addition of tools or parts must be \$100.

DELIVERY SCHEDULE

Shipping dates provided by HPS are estimates only. HPS shall make every reasonable effort to meet Buyer's shipping requirements provided HPS promptly receives all necessary information from Buyer and approved drawings if required by HPS. HPS will not assume liability because of delayed shipment for any reason. HPS's responsibility ceases upon acceptance of shipment by carrier.

CANCELLATIONS

Cancellation of an order for current stock product requires a minimum of five (5) days' notice prior to actual ship date. Stock product orders shipped after cancellation notice is received, but before expiration of the five-day requirement, will be subject to all standard returned product conditions, noted below. Cancellation on non-stock products may be made only if no work has been performed or material purchased. If cancellation is requested after work is in progress, there will be a cancellation 3 Effective January 1, 2011 charge as established by HPS. Orders may not be cancelled unless HPS gives its written consent, and then only upon agreement as to applicable cancellation charges.

RETURNED PRODUCT

GENERAL CONDITIONS applying to all transactions:

1. Product is not returnable without the written consent of HPS.
2. Request for permission to return product must be made in writing within one year from date of shipment, and Buyer must provide original HPS invoice number.
3. Product to be returned must be considered standard product by HPS.
4. HPS reserves the right to refuse returns of any special or made-to-order product, regardless of condition.
5. All returned products must be in excellent, resaleable condition and packaged in the original carton. Products will be inspected upon return; and any service or repair needed to place them in first class, saleable condition will be charged and added to the restocking charge.
6. A 25% restocking charge will be deducted from all credits issued on authorized returns.
7. Return Goods Authorization (RGA) Packing List, supplied by the factory, must accompany the return shipment.
8. Return freight must be prepaid. Product must be received by HPS within sixty (60) days of issuance of RGA.
9. Net value of the return must not be less than \$250.
10. HPS reserves the right to deduct for any damage sustained in transit.
11. Unauthorized returns will be refused. Equipment returned without proper authorization from HPS will, at the sole option of HPS, be returned to the Buyer freight collect, or scrapped immediately with no issuance of credit. Unauthorized product included in a return will not be credited.

BROKEN PACKAGE POLICY

Shipments will be made in standard package quantities or multiples thereof. HPS Customer Service will notify the Buyer of any orders that do not comply with this policy. The Buyer must authorize an adjustment to comply with standard package quantities before the order will be entered.

DROP SHIPMENT POLICY

A 10% net order value drop shipment charge will be added to all purchase orders requesting delivery to a location other than a recognized Buyer stocking warehouse, with the exception of full truckload and/or project material. This is in addition to any other charges to the net order.

QUOTATION PRICE PROTECTION

All prices shown in the price lists are subject to change without notice. All quotations on special products or modifications to catalog products are binding only if confirmed in writing by the factory for the period shown on the quotation. Price protection will be provided for a period of thirty (30) days from date of quotation from HPS.

ORDERS

All orders are taken and prices quoted only with the understanding that each order shall be subject to the acceptance of HPS upon such terms as we may specify when order is received. Prices to cover amount of any sales or excise tax which now or hereinafter may be imposed by any taxing authority upon this product or the sale or manufacture thereof.

PRODUCT SPECIFICATION

HPS reserves the right to discontinue products, modify designs, and change specifications or prices without incurring obligation.

INVOICING

All invoices are due and payable per the standard terms stated herein. In the case of an apparent discrepancy in a line item charge, Buyer is obligated to advise HPS Customer Service in writing of the nature of the claimed discrepancy within five (5) days of receipt of the invoice. This includes all requests for proof of delivery. A claim of discrepancy does not relieve Buyer of the absolute obligation to pay the remaining balance of the invoice in accordance with the standard terms of payment. Upon review, HPS will have sole discretion to resolve the discrepancy; and the Buyer expressly agrees to abide by HPS' decision. HPS will promptly advise Buyer of its decision regarding any disputed items or charges.

OSHA

HPS warrants that at time of shipment, the products will conform to the applicable occupational safety and health standards promulgated pursuant to the Federal Occupational Safety and Health Act of 1970, which are in effect on the date that HPS enters its acknowledgment of Buyer's order. The Buyer's exclusive remedy and HPS' liability for breach of this warranty is limited to replacement of the nonconforming products.

FAIR LABOR STANDARDS ACT AS AMENDED

HPS represents that any goods to be delivered hereunder will be produced in compliance with the requirements of the Fair Labor Standards Act of 1938, as amended.

NOTE

These Terms and Conditions supersede all those published and previously issued by The A.B. Chance Company, The Ohio Brass Company, Anderson Electrical Products, Inc., Fargo Manufacturing Company, Inc., Chardon Electrical Components, USCO Power Equipment Corporation, Hubbell Canada LP and Hubbell Power Systems, Inc.

Kitting —
TowerPak®

Kitting — TowerPak®

For too long, electric utility companies have dealt with the burden of obtaining supplies from different sources, leading to high costs, wasted time and inconvenience. In response to these project challenges, Hubbell Power Systems created TowerPak.

Think Inside the Box.

When you order TowerPak, you can trust that all tower hardware is reviewed before it is shipped to ensure a perfect fit. Custom developed to suit your individual needs, components are identified by phase or tower, clearly marked and efficiently packaged to make tower construction faster and more cost effective than ever before.

One Tower. One TowerPak.

TowerPak groups all of your transmission hardware together by assembly or structure for easy distribution. Packaging by assembly or by structure is a decision you and your Hubbell partner will make during your project development. Either solution will ensure clear descriptive labeling for simple inventory management in the field.

Your Way, Any Way...

Assemblies — components of one or more assemblies may be packed together in one box or palletized.

Insulators — with rings in protective cartons, insulators are carefully packed in wooden crates and labeled appropriately. For example, 25K lb SML suspension insulators are crated and labeled with the insulator catalog number, sales order number and quantity.

Materials When, Where and How You Need Them

Each TowerPak arrives at your warehouse — or even your job site — in durable, weather-resistant crates. Inside, every part is clearly labeled for quick identification and accurate assembly.

And we absolutely guarantee on-time delivery via our expedited, freight-coordinated and trackable shipping. No surprises. No delays.

The Right Fit, Every Time

With Hubbell Power Systems, you know that each tower component is designed and manufactured to meet the highest quality standards.

You can trust that TowerPak is the solution to simplifying inventory management on complex transmission projects. After all, it was developed by the largest and most experienced technical staff in the industry — here at Hubbell Power Systems.

For more information, contact your sales representative.

Line And Tower Hardware

Anderson™ manufactures a complete line of quality line and tower end hardware to meet all transmission line construction needs. A variety of devices are available to bundle conductors, attach conductors to insulator strings and attach insulator strings to support arms.

Most of our line and tower end hardware is manufactured from ductile iron. Ductile iron castings offer great design flexibility and freedom to utilize design improvements without expensive tooling changes. We also provide a line of forged steel tower end fittings. Steel forgings are often required to provide the necessary ultimate strength when dimensional restrictions are imposed such as with most ball fittings, shackles and links.

Ball and socket fittings are specified under an ANSI class with respect to insulators. We offer two types of ball and socket fittings: Standard fittings (rated 30,000 pounds) for ANSI 52-3 and 52-5 class insulators, and high strength fittings (rated 50,000 pounds) for ANSI 52-8 and 52-11 class insulators.

The ultimate strength rating of our line and tower end hardware indicates the load where rupture can occur. It is a fairly common industry practice to match the ultimate strength of line and tower end hardware to that of the associated insulators. It is expected that the customer will apply suitable safety factors.

Hubbell/Anderson hardware fittings are designed for electric utility power line static-load applications. They are not recommended for hoisting (up and down) load-handling applications.

For IEC and CSA forged steel hardware offerings, see Hubbell Power System's "Transmission Hardware Canadian Product Offering" Catalog.

Hardware Fittings — Ductile Iron

Socket Eye

Socket eyes can be used for connecting conductor clamping devices to ball and socket type insulators.

		L	
SS30	30,000 (133)	3 (76.2)	2.00

NOTE: For use with class 52-3 and 52-5 insulators per ANSI Spec. C-29.2-71.

Ductile Iron Socket Y-Clevis

DUCTILE IRON

SYC

Socket Y-clevises are used to connect yoke plates or associated hardware to ball and socket insulators. The bent bolt in the Y-section provides an additional point of articulation within an assembly.

Type SYCS is a short coupling version of Type SYC that offers the same articulation advantages.

Material: Body – galvanized ductile iron
Hardware – galvanized steel
Cotter Pin – stainless steel

Hardware Fittings — Ductile Iron

Y-Clevis Eye

Y-clevis eyes are primarily used to attach clamping devices to yoke plates or other associated hardware in a bundle conductor assembly. The bent bolt in the Y-section provides an additional point of articulation within an assembly.

Material: Body – *galvanized ductile iron*
Hardware – *galvanized steel*
Cotter Pin – *stainless steel*

(1) These shackles are type BNK (furnished with Bolt, Nut and Cotter Key).

Ball Eyes

Ball eyes are used to attach ball and socket insulators to other associated hardware. The use of the ball oval-eye and an anchor shackle is one of the most common distribution tower attachment combinations.

Material: Body – galvanized steel

NOTE: For use with class 52-3 and 52-5 insulators per ANSI Spec. C-29.2-71. Other combinations may be used, contact factory for additional information. Bolt and nut may be substituted for clevis pin by adding suffix "BNK" to catalog number.

Steel

Clevis connections, especially if working under light mechanical load, can develop oxide films on their bearing surfaces. If these films are not fractured by weight and movement, they are subject to puncture by line voltages whose small discharges can create RIV. By establishing a shunt around the clevis joint, by means of RIV clips, the condition is easily remedied. Clips are made of spring stainless steel wire with ends cut flat and sharp to give good point contact. They are held securely by snapping around the Clevis Pin. Clip weight is 0.845 pounds per hundred.

RIV Clip
Catalog Number 941104001

NOTE: When ordering, replace XX with Type in Catalog Number. Example: TB34JJ6BNK for jaw-jaw end fittings with 6" take up. BNK suffix not valid for Type EE turnbuckles. Add "LN" suffix if jam nuts are required. The torque required to rotate the boss of a turnbuckle under tension can be calculated by the formula:

$$T = 2 (kdW/i_2) \text{ ft-lb}$$

Where: k = Friction factor (0.16)
d = Nominal thread diameter (inches)
W = Applied tension load (lb)

Example: $\frac{3}{4}$ turnbuckle under 4,000 lb tension
 $T = 2(0.16 \times 0.75 \times 4000 / 12) = 80 \text{ ft-lb}$

Yoke Plates Rectangular Configuration

DUCTILE/STEEL

YPR

Rectangular Configuration

These yoke plates are used with a double string of insulators to deadend a two conductor bundle.

Type YPR yoke plates may be furnished in a variety of sizes, hole spacings, ultimate strengths and provisions for mounting corona rings.

Material: *Body* – galvanized ductile iron or galvanized steel

Ductile Catalog Number YPR30187221

Ultimate Strength Per Insulator
Attachment Hole – 30,000 lb
Contact Factory for Lifting Hole Rating

Steel Catalog Number 976113002

Ultimate Strength Per Insulator
Attachment Hole – 30,000 lb

Ductile Catalog Number YPR30173512

Ultimate Strength Per
Attachment Hole – 30,000 lb
Lifting Hole Rating – 30,000 lb

Steel Catalog Number 950213002

Ultimate Strength Per Insulator
Attachment Hole – 50,000 lb

Ductile Catalog Number YPR6019401

Ultimate Strength Per Insulator
Attachment Hole – 60,000 lb
Contact Factory for Lifting Hole Rating

Steel Catalog Number 929333002

Ultimate Strength Per Insulator
Attachment Hole – 40,000 lb

Hardware Fittings — Aluminum, Ductile/Steel

Transmission Corona Rings

Type TCR corona rings are primarily used on deadend assemblies to grade the lower insulators on a string and shield the associated hot line hardware from corona and RIV. Type TCR corona rings are fabricated in a variety of sizes, shapes and mounting angles, depending on the system voltage and deadend assembly type.

Contact factory with deadend assembly details for assistance in specifying a specific TCR ring catalog number.

Material: Body – galvanized ductile iron or galvanized steel

Hardware Fittings — Aluminum

Bundling Yoke Wishbone Configuration

Type YPW yokes are used to vertically bundle conductors on new or rebuilt lines. Consequently, information as to conductor sizes, types of armor rod, if used, conductor spacing, ultimate strengths and existing clamp details must be given at time of ordering. YPW yokes are designed for use with Anderson™ clamps. Because YPW yokes may be furnished in a variety of sizes, conductor spacing, and ultimate strengths for both low voltage and EHV application, please contact factory for more details.

Material: Yoke Plate – aluminum alloy
Clevis Pin – galvanized steel
Cotter Pin – stainless steel

In addition to industry standard markings for connectors, TSCHT suspension clamps are permanently marked with the IEC standard symbol for hot surface, allowing construction inspectors to easily verify that the installed

Jumper Clamps and Assemblies

Figure 1

Figure 3

Figure 2

Figure 4

A practical application of Quadri*Sil® line posts is for support of jumper loops on transmission lines.

Horizontal motion of the jumper is restricted, and the factor of wind sway is eliminated. Additionally, the crossarm length may be reduced. The difference in cost of insulation is not significant, but the savings in tower cost can be attractive. Regardless of cost, the use of a jumper support improves construction.

If using a single clamp, clamp position relative to the insulator may be changed by bolting the clamp through the upper hole in the insulator end fitting.

Jumper clamps are not intended for tangent span applications.

Material: Clamps – aluminum alloy
Yoke and Hardware – galvanized steel

Suspension and Stirrup Clamps — *For T2 Conductors*

T2 is the designation for a type of conductor developed in the mid-1960s by Kaiser Aluminum Company. The “T” is for “twisted” and the “2” indicates two wires twisted together. T2 is actually two regular round conductors of any type (ACSR, AAC, ACAR, AAAC, etc.) twisted around each other at 9-foot intervals. The main purpose of the twisted design is to prevent galloping by constantly varying the cable diameter face. This wind-induced galloping phenomena occurs primarily in the Midwestern U.S.

Some utilities prefer suspension and strain clamps with “double groove” clamping, while others find that single-groove standard clamps, properly sized and tested, perform adequately on T2.

Anderson™ offers both single and double groove clamps. In the early days of T2, filler rods were used and designed for round conductors. After years of field service and testing, Anderson believes filler rods are no longer necessary, and we do not recommend them.

Another clamp approach is to separate the two round conductors at the clamping point and use two separate single-groove clamps attached to a small yoke plate.

Anderson can supply your T2 clamp needs regardless of your construction preference.

Suspension Clamps — Aluminum

Double Groove Corona Free Clamp

ALUMINUM

CFST2

Type CFST2 is recommended for AAC, ACSR or AAAC T2 conductors. Maximum conductor temperature 130 C. See Catalog Reference section for maximum conductor temperature guidelines.

Designed with double grooves for use on standard or extra-high voltage T2 transmission lines. Corona and RIV are controlled through the design of the clamp, thus eliminating the need for control rings.

U-bolts are retained in place by grommets.

Material: Body and Keeper – aluminum alloy
Hardware – galvanized steel
Socket and Clevis – galvanized ductile iron
Cotter Pin – stainless steel
Grommet – neoprene

Suspension Clamps — Aluminum/Ductile Iron

Double Groove Trunnion Clamp

ALUMINUM/DUCTILE

TSCT2/TSCDT2

For standard voltage applications with AAC, ACSR, or AAAC T2 conductor. See Catalog Reference section for maximum conductor temperature guidelines.

Designed with double groove keeper for use on tangent suspension spans with horizontal or vertical post insulators.

Keeper is reversible for proper fit on different size conductors.

Material: TSCT2: Body and Keeper – aluminum alloy
 TSCDT2: Body – galvanized ductile iron
 Keeper – aluminum alloy
 Hardware – galvanized steel
 Anti-static Spring – stainless steel

Transmission Connectors — *Helical Cushion*

250° Continuous HV and EHV

The HCSA is a bolted aluminum suspension clamp. It is designed to provide enhanced conductor support and protection. The HCSA combines a cast aluminum clamp assembly with helical aluminum alloy rod sets and EPDM rubber inserts. The rubber inserts are assembled directly onto the conductor and are held in place with the helical rods. The clamp assembly is then bolted around the helical wrapped rubber supporting inserts to complete the install.

Familiar Anderson Catalog Conventions (# Indicates Max Cable O.D.):

EX: HCSA**1516** covers conductors with OD within 1.478-**1.516"**.

ADD "**E**" suffix for EHV version (HCSA1516**E**).

HCSA Delivered:

- Familiar Design (Look, Feel & Function)
- Corona test proven designs
- Packaging similar to existing industry experience
- Drawings & test reports available

*One part number for both **S**tandard and **H**igh **T**emperature applications

Suspension Clamps — *Helical Cushion*

Aluminum Clamp (Assembly 250°C)

ALUMINUM

HCSA

B
21

For standard voltage application with all aluminum, ACSR, ACSS, or aluminum alloy conductor. See Catalog Reference section for maximum conductor temperature guidelines.

Material: Clamp Body, Strap – *aluminum alloy*
Rubber Insert – *EPDM rubber*
Helical Rods – *aluminum alloy*
Hardware (Bolt, FW, LW, Nut) – *galvanized steel*
Cotter Pin – *stainless steel*

Application:

EX: HCSA **1516** covers conductors with OD within 1.478-**1.516"**.
ADD "**E**" suffix for EHV version (HCSA1516**E**).

General Use:

Helical Cushion Suspension Assembly is designed to provide additional conductor strand protection at the point of attachment. It lowers the mechanical and thermal stresses which can be caused by a bend, compression, abrasion, or arc flashover.

Suspension Clamps — Helical Cushion

Corona Free Clamp (Assembly 250°C)

ALUMINUM

HCSA

Designed for use on standard voltage transmission lines. Corona and RIV tested up to 230kV applications for respective conductor sizes.

HCSA is recommended for all aluminum, ACSR, ACSS, or aluminum alloy conductor. Example: HCSA1118. Add suffix "ANCO" to include ANCO® locknut. Example: HCSA1118ANCO. Add suffix "S, C, or Y90" for respective Socket, Clevis, or Y90-Clevis Fitting. Example: HCSA1118S or HCSA1118ANCOS

Material: Clamp Body, Strap – aluminum alloy
Rubber Insert – EPDM rubber
Helical Rods – aluminum alloy
Hardware (Bolt, FW, LW, Nut) – galvanized steel
Cotter Pin – stainless steel

Suspension Clamps — Helical Cushion (EHV)

Corona Free Clamp (Assembly 250°C)

ALUMINUM

HCSA (EHV)

Designed for use on standard voltage transmission lines. Corona and RIV tested up to 500kV applications for respective conductor sizes.

HCSA EHV is recommended for all aluminum, ACSR, ACSS, or aluminum alloy conductor. For EHV add suffix "E."

Example: HCSA1118E. Add suffix "ANCO" to include ANCO® locknut. Example: HCSA1118EANCO. Add suffix "S, C, or Y90" for respective Socket, Clevis, or Y90-Clevis Fitting. Example: HCSA1118ES or HCSA1118EANCOS

Material: Clamp Body, Strap – aluminum alloy
Rubber Insert – EPDM rubber
Helical Rods – aluminum alloy
Hardware (Bolt, FW, LW, Nut) – galvanized steel
Cotter Pin – stainless steel

NOTE: Sag eye ultimate strength is 60% of clamp strength without fitting. Rated slip strength as a percentage of conductor RBS varies with conductor type, size and stranding. Minimum slip strength rating on standard strength conductors is 40% RBS (partial tension). For most standard strength conductors, minimum slip strength of this clamp series is 60% RBS (normal tension). Consult factory for slip strength test data on specific clamp and conductor combinations. Recommended torque on U-bolts: 1/2" — 480 in-lb, 5/8" — 720 in-lb. Bolt and nut may be substituted for clevis pin by adding suffix "BNK" to catalog number. For corona-free applications on EHV lines, add suffix "CRF" to catalog number. Example SD130NCRF.

* These clamps furnished with socket eyes for connection to ANSI class 52-8 or 52-11 insulators.

Deadends — Bolted

Double Groove Strain Clamp Aluminum

Made with double groove keeper to accommodate twin conductor. For transmission line construction with all aluminum, ACSR or aluminum alloy conductor. See Catalog Reference section for maximum conductor temperature guidelines.

Material: Body and Keeper – aluminum alloy
Hardware – galvanized steel
Sockets and clevises – galvanized ductile iron

(1) RUS Listed

Deadends — Bolted

Quadrant Strain Clamp Aluminum

These clamps are used primarily for deadending aluminum substation cable bus.

During installation the cable will slide free under the U- bolts, or if preferred, U-bolts may be removed and cable laid in clamp grooves from the side.

These clamps are compact for greatest phase clearance.

Material: Body and Keeper – aluminum alloy

Hardware – galvanized steel

Sockets and Clevises – galvanized ductile iron

Cotter Pin – #302 stainless steel

- NOTES:** (1) Sag Eye Ultimate Strength is 60% of Ultimate Body Strength without fitting.
 (2) Rated slip strength as a % of conductor RBS varies with conductor type, size and stranding. Minimum slip strength rating on standard strength conductors is 40% RBS (Partial Tension). For many standard strength conductors, minimum slip strength of this clamp series is 60% RBS (Normal Tension). (Consult factory for slip strength test data on specific clamp & conductor combinations.)
 (3) Recommended torque on u-bolts: 1/2" -- 480 in-lbs., 5/8" -- 720 in-lbs.
 (4) Bolt and Nut may be substituted for clevis pin by adding suffix "BNK" to catalog number.

Deadends — Bolted

Quadrant Strain Clamp Bronze

These clamps are used primarily for deadending copper substation cable bus.

When installing, cable will slide freely under the U-bolts. If preferred, U-bolts may be removed and cable laid in clamp grooves from the side.

These clamps are compact for greatest phase clearance.

Material: Body and Keeper – high strength bronze
Hardware – galvanized steel
Sockets and Clevises – galvanized ductile iron
Cotter Pin – #302 stainless steel

Deadends — Bolted

Quadrant Strain Clamp Ductile Iron

DUCTILE IRON

SWDE/MD

For deadending static wires. May be used to deadend copper or Copperweld® phase conductors. Magnetic induction heating will occur.

Material: Body and Keeper – *galvanized ductile iron*
Sockets and Clevises – *galvanized ductile iron*
Cotter Pin – *stainless steel*

NOTE: Sag eye ultimate strength is 60% of clamp strength without fitting. Rated slip strength as a percentage of conductor RBS varies with cable size and stranding. Minimum slip strength on standard shield wire cables is 40% RBS (partial tension). For many shield wire cables, minimum slip strength of this clamp series is 60% RBS (normal tension). Consult factory for slip strength test data on specific clamp and conductor combinations. Recommended torque on U-bolts: ½" — 480 in-lb. Bolt and nut may be substituted for clevis pin by adding suffix "BNK" to catalog number.

Deadends — Compression

Uni-Grip® (One Die) Eye Type, Single Tongue ACSR Conductors

ALUMINUM/STEEL

A01/A03

Full tension deadend assembly for ACSR conductors consists of a prefilled aluminum deadend body precompressed onto a steel eye, a prefilled 15° jumper terminal, mounting hardware and core gripping unit. Uni-Grip Deadends and Jumper terminals for conductors 1.00 inch diameter or larger are EHV rated.

Material: Body – seamless extruded aluminum alloy tube
Eye – galvanized forged steel
Terminal – seamless extruded aluminum alloy tube

Hardware – aluminum alloy

NOTE: For XL repair deadend add suffix "XL" and repair cutoff length in inches. Example: A0112451XL24. Suffix "NT" omits jumper terminal. Example: A0112451NT. Suffix "NPNT" omits both jumper terminal and deadend tongue. Example: A0112451NPNT. Consult factory for Self-Dampening (SD), Trapezoidal (TW) and Metric ACSR Conductors.

Deadends — Compression

Uni-Grip® (One Die) Eye Type, Double Tongue ACSR Conductors

Full tension deadend assembly for ACSR conductors consists of a prefilled aluminum deadend body precompressed onto a steel eye, two prefilled 15° jumper terminals, mounting hardware and core wire gripping unit.

Material: Body – seamless extruded aluminum alloy tube
 Eye – galvanized forged steel
 Terminal – seamless extruded aluminum alloy tube

Deadends — Compression

Uni-Grip® (One Die) Adjustable Clevis Type ACSR Conductors

ALUMINUM/STEEL

A09/A10

Full tension deadend assembly for ACSR conductors consists of a prefilled aluminum deadend body precompressed onto a steel adjustable clevis. Single tongue deadends are supplied with one jumper terminal and double tongue deadends are supplied with two jumper terminals, mounting hardware and core wire gripping unit.

Material: Body – seamless extruded aluminum alloy tube
Clevis – galvanized forged steel
Terminal – seamless extruded aluminum alloy tube
Terminal Hardware – aluminum alloy
Cotter Pin – stainless steel

NOTE: For XL repair deadend add suffix "XL" and repair cutoff length in inches. Example: A0912451XL24. Suffix "NT" omits jumper terminal. Example: A0912451NT. Suffix "NPNT" omits both jumper terminal and deadend tongue. Example: A0912451NPNT. Consult factory for Self-Dampening (SD), Trapezoidal (TW) conductors and Metric Conductors.

Deadends — Compression

Uni-Grip® (One Die) Eye Type, Single Tongue AAAC and ACAR Conductors

ALUMINUM/STEEL

AB01/AB03

Full tension deadend assembly for AAAC and ACAR conductors consists of a prefilled aluminum deadend body precompressed onto a steel eye, a prefilled 15° jumper terminal and mounting hardware.

Material: Body – seamless extruded aluminum alloy tube
Eye – galvanized forged steel
Terminal – seamless extruded aluminum alloy

tube

Hardware – aluminum alloy

Deadends — Compression

Uni-Grip® (One Die)

Adjustable Clevis Type AAAC and ACAR Conductors

ALUMINUM/STEEL

AB09/AB10

Full tension deadend assembly for AAAC and ACAR conductors consists of a prefilled aluminum deadend body precompressed onto a steel adjustable clevis. Single tongue deadends are supplied with one jumper terminal and double tongue deadends are supplied with two jumper terminals and mounting hardware.

Material: Body – seamless extruded aluminum alloy tube
 Clevis – galvanized forged steel
 Terminal – seamless extruded aluminum alloy tube
 Terminal Hardware – aluminum alloy
 Cotter Pin – stainless steel

NOTE: For XL repair deadend add suffix "XL" and repair cutoff length in inches. Example: AB091212XL24. Suffix "NT" omits jumper terminal. Example: AB091212NT. Suffix "NPNT" omits both jumper terminal and deadend tongue. Example: AB091212NPNT.

Deadends — Compression

Uni-Grip® (One Die) Eye Type, Single Tongue All Aluminum (AAC) Conductors

ALUMINUM/STEEL

C01/C03

Full tension deadend assembly for All Aluminum (AAC) conductors consists of a prefilled aluminum deadend body precompressed onto a steel eye, a prefilled 15" jumper terminal and mounting hardware.

Material: Body – seamless extruded aluminum alloy tube
Eye – galvanized forged steel
Terminal – seamless extruded aluminum alloy

tube

Hardware – aluminum alloy

NOTE: For XL repair deadend add suffix "XL" and repair cutoff length in inches. Example: C011414XL18. Suffix "NT" omits jumper terminal. Example: C011414NT. Suffix "NPNT" omits both jumper terminal and deadend tongue. Example: C01141421NPNT.

Deadends — Compression

Uni-Grip® (One Die) Eye Type, Double Tongue All Aluminum (AAC) Conductors

Full tension deadend assembly for All Aluminum (AAC) conductor consists of a prefilled aluminum deadend body precompressed onto a steel eye, two prefilled 15° jumper terminals and mounting hardware.

Material: Body – seamless extruded aluminum alloy tube
Eye – galvanized forged steel
Terminal – seamless extruded aluminum alloy tube
Hardware – aluminum alloy

NOTE: For XL repair deadend add suffix "XL" and repair cutoff length in inches. Example: C041212XL18. Suffix "NT" omits jumper terminal. Example: C041212NT. Suffix "NPNT" omits both jumper terminal and deadend tongue. Example: C041212NPNT. Consult factory for Self-Dampening (SD) and Trapezoidal (TW) conductors.

Deadends — Compression

Uni-Grip® (One Die) Adjustable Clevis Type All Aluminum (AAC) Conductors

ALUMINUM/STEEL

C09/C10

Full tension deadend assembly for All Aluminum (AAC) conductors consists of a prefilled aluminum deadend body precompressed onto a steel adjustable clevis. Single tongue deadends are supplied with one jumper terminal and double tongue deadends are supplied with two jumper terminals and mounting hardware.

Material: Body – seamless extruded aluminum alloy tube

Clevis – galvanized forged steel

Terminal – seamless extruded aluminum alloy

tube

Terminal Hardware – aluminum alloy

NOTE: For XL repair deadend add suffix "XL" and repair cutoff length in inches. Example: C091212XL18. Suffix "NT" omits jumper terminal. Example: C091212NT. Suffix "NPNT" omits both jumper terminal and deadend tongue. Example: C091212NPNT.

Deadends — Compression

Conventional (Two Die) System

ALUMINUM/STEEL

SEDA/DEDA

Full-tension deadend assemblies for ACSR and ACSS (SSAC) conductors consist of an aluminum deadend body, a steel eye, a 15° jumper terminal and mounting hardware. Conventional Deadends and Jumper terminals for conductors 1.00 inch diameter or larger are EHV rated.

Material: **Body** – seamless extruded aluminum alloy tube
Eye – galvanized forged steel
Terminal – seamless extruded aluminum alloy tube
Hardware – aluminum alloy⁽¹⁾

Steel Deadend Eye

SEDA

Single-Tongue Eye type Deadend Assembly
(after installation)

Jumper Terminal

Deadend Body
(Single Tongue)

Deadends — Compression

Deadends Compression Conventional (Two Die) ACSR Conductors

ALUMINUM/STEEL

SEDA/DEDA

Full-tension deadend assemblies for ACSR conductors consist of an aluminum deadend body, steel deadend eye, 15° jumper terminal and terminal mounting hardware. Terminal and tongue have NEMA hole spacing.

Material: Body – seamless extruded aluminum alloy tube
 Eye – galvanized forged steel
 Terminal – seamless extruded aluminum alloy tube
 Terminal Hardware – ½ - 13 aluminum alloy⁽¹⁾

NOTE: Joint compound: use Fargo® UJC-16 joint compound. For lowest resistance connection, install with Fargo HTJC-16 compound — see table below for number of 16 oz tubes required per component.

(1) To specify optional stainless steel terminal hardware, including required Belleville washers, add “SS” suffix to catalog number of deadend assembly or separately ordered terminal.

(2) To specify double tongue deadend assembly, change first character of catalog number from “S” to “D”. To specify deadend assembly without jumper terminal, add “NT” suffix to catalog number.

(3) Deadends are full-tension rated for conductors with standard strength steel cores.

(4) 15° jumper terminal allows for 0° or 30° jumper take-off angle from 15° deadend tongue. Separately ordered straight terminals may be specified by changing terminal component catalog number prefix from “30” to “33”.

(5) Compression press minimum size: 20AH and smaller — 12 ton; 10SH and smaller — 12 ton; 12SH and larger — 60 ton; 42AH and larger — 100 ton.

Deadends — *Compression*

Deadends — Compression

Conventional (Two Die) ACSS Conductors

ALUMINUM/STEEL

SEDA/DEDA-SSAC

Full-tension deadend assemblies for ACSS conductors consist of an aluminum deadend body, steel deadend eye, 15° jumper terminal and terminal mounting hardware. Terminal and tongue have NEMA hole spacing.

Material: Body – seamless extruded aluminum alloy tube
 Eye – galvanized forged steel
 Terminal – seamless extruded aluminum alloy tube
 Terminal Hardware – aluminum alloy⁽¹⁾

NOTE: Joint compound: fittings are ACSS-rated when installed with Fargo® HTJC-16 joint compound — see table below for number of 16 oz tubes required for deadend body and terminal components.

(1) To specify optional stainless steel terminal hardware, including required Belleville washers, add “SS” suffix to catalog number of deadend assembly or separately ordered terminal.

(2) To specify double tongue deadend assembly, change first character of catalog number from “S” to “D”. To specify deadend assembly without jumper terminal, add “NT” suffix to catalog number.

(3) Deadends are full-tension rated for conductors with standard, aluminum-clad (AW), and high-strength (HS) steel cores.

(4) 15° jumper terminal allows for 0° or 30° jumper take-off angle from 15° deadend tongue. Separately ordered straight terminals may be specified by changing terminal component catalog number prefix from “30” to “33”.

(5) Compression press minimum size: 20AH and smaller — 12 ton; 10SH and smaller — 12 ton; 24AH through 40AH — 60 ton; 12SH and larger — 60 ton; 42AH and larger — 100 ton.

Deadends — Compression

Conventional (Two Die) ACSS/TW Conductors

ALUMINUM/STEEL

SEDA/DEDA-STW

Full tension deadend assemblies for ACSS conductors consist of an aluminum deadend body, steel deadend eye, 15" jumper terminal and terminal mounting hardware. Terminal and tongue have NEMA hole spacing.

Material: Body – seamless extruded aluminum alloy tube
 Eye – galvanized forged steel
 Terminal – seamless extruded aluminum alloy tube
 Terminal Hardware – ½ - 13 aluminum alloy⁽¹⁾

NOTE: Joint compound: fittings are ACSS-rated when installed with Fargo® HTJC-16 joint compound — see table below for number of 16 oz tubes required for deadend body and terminal components.

(1) To specify optional stainless steel terminal hardware, including required Belleville washers, add “SS” suffix to catalog number of deadend assembly or separately ordered terminal.

(2) To specify double tongue deadend assembly, change first character of catalog number from “S” to “D”. To specify deadend assembly without jumper terminal, add “NT” suffix to catalog number.

(3) Deadends are full-tension rated for conductors with standard, aluminum-clad (AW), and high-strength (HS) steel cores.

(4) 15° jumper terminal allows for 0° or 30° jumper take-off angle from 15° deadend tongue. Separately ordered straight terminals may be specified by changing terminal component catalog number prefix from “30” to “33”.

(5) Compression press minimum size: 20AH and smaller — 12 ton; 10SH and smaller — 12 ton; 24AH through 40AH — 60 ton; 12SH and larger — 60 ton; 42AH and larger — 100 ton.

Fargo Type HTJC-16 Joint Compound Required (Cartridges Per Fitting)

Component	Die Size										
	20AH	24AH	27AH	30AH	34AH	36AH	38AH	40AH	42AH	44AH	44AH
Deadend Body	0.15	0.24	0.34	0.50	0.56	0.62	0.82	0.90	1.10	1.20	1.20
Jumper Terminal	0.04	0.06	0.07	0.10	0.14	0.16	0.18	0.22	0.25	0.30	0.30

Deadends — *Compression*

Full-tension deadend assemblies for AAC conductors consist of an aluminum deadend body, steel deadend eye, 15" jumper terminal and terminal mounting hardware. Terminal and tongue have NEMA hole spacing.

ALUMINUM STEEL

NOTE: The deadend assemblies include the steel bodies, aluminum bodies, and jumper terminals (with mounting hardware). Install with Fargo® type UJC joint compound. For lowest resistance connection, install with Fargo type HTJC joint compound. For ACC conductors smaller than 795 kcmil, Fargo offers Uni-Grip® one die deadends.

(1) To construct assembly catalog numbers

Step 1. Choose assembly type from following:

SEDA = single tongue, eye type, deadend assembly

DEDA = double tongue, eye type, deadend assembly

Step 2. Refer to conductor listing for assembly number (suffix)

example: SEDA-3300 = single tongue, eye type, deadend for 795 kcmil 37 strand "ARBUTUS"

Suffix "NT" = assembly without jumper terminal.

(2) 15° jumper terminal allows for 0° or 30° jumper take-off angle from 15° deadend tongue. Straight Terminals (15° deadend jumper take-off) may be specified by changing terminal catalog number prefix from "30" to "33."

Uni-Grip® (One Die) Full-Tension ACSR Conductors

ALUMINUM

A15

A splice assembly for ACSR consists of a prefilled aluminum body and two core wire gripping units.

Splices are prefilled with inhibitor and barrel ends plugged.

Material: Body – seamless extruded aluminum alloy tube
Gripping Unit – aluminum alloy

NOTE: For extra length repair splice, add "XL" suffix and repair cutoff length in inches. Example A15 1021 XL 24. Splices are EHV rated where conductor is 1.0 in (25.4 mm) O.D. or larger.

Splices — Compression

Jumper Loop Limited Tension AAC, AAAC, ACAR and ACSR Conductor Splice

ALUMINUM

JLS

Jumper Loop Splices are prefilled with inhibitor and barrel ends are plugged.

Material: Body – seamless extruded aluminum alloy tube

(1) These splices also approved for minimum tension applications on AAAC and ACAR conductors within the diameter ranges listed.

(2) Repair sleeves are EHV rated where conductor is 1.0 (25.4 mm) O.D. or larger.

Splices — Compression

Conventional (Two Die) Full-Tension ACSR Conductors

ALUMINUM

TJA

Splice assemblies for ACSR conductors consist of an aluminum splice body and steel sleeve.

Material: Body – seamless extruded aluminum tube
Steel Sleeve – plated steel

NOTE: Splices are EHV rated where conductor is 1.0 in (25.4 mm) O.D. or larger. Joint compound: use Fargo® UJC16 Joint compound. Or, for lowest resistance connection, install with Fargo HTJC-16 compound. See table below for number of 16 oz tubes required per component.

(1) TJA splice assemblies are full-tension rated for conductors with standard strength steel cores.

(2) Loop splice is minimum tension connector (no steel sleeve component required).

(3) Compression press minimum size:

20AH and smaller — 12 ton
 24AH through 40AH — 60 ton
 42AH and larger — 100 ton
 10SH and smaller — 12 ton
 12SH and larger — 60 ton

Fargo Type UJC16 or HTJC16 Joint Compound Required (Cartridges per Fitting)

NOTE: Splices are EHV rated where conductor is 1.0 in (25.4 mm) O.D. or larger. Joint compound: Fittings are ACSS-rated when installed with Fargo® HTJC16 joint compound — see table below for number of 16 oz tubes required for deadend body and terminal components.

(1) TJA splice assemblies are full-tension rated for ACSS conductors with standard high-strength (HS) and extra high-strength (EHS/UHS) steel cores.

(2) Loop splice is minimum tension connector (no steel sleeve component required).

(3) Compression press minimum size:
 20AH and smaller — 12 ton
 24AH through 40AH — 60 ton
 42AH and larger — 100 ton
 10SH and smaller — 12 ton
 12SH and larger — 60 ton

Fargo Type HTJC16 Joint Compound Required (Cartridges Per Fitting)

Splices — *Compression*

NOTE: Splices are EHV rated where conductor is 1.0 in (25.4 mm) O.D. or larger. Joint compound: Fittings are ACSS-rated when installed with Fargo® HTJC16 joint compound. See table below for number of 16 oz tubes required for deadend body and terminal connections.

- (1) TJA splice assemblies are full-tension rated for ACSS/TW conductors with standard high-strength (HS) and extra high-strength (EHS/UHS) steel cores.
- (2) Loop splice is minimum tension connector (no steel sleeve component required).
- (3) Compression press minimum size:
 - 20AH and smaller — 12 ton
 - 24AH through 40AH — 60 ton
 - 42AH and larger — 100 ton
 - 10SH and smaller — 12 ton
 - 12SH and larger — 60 ton

Repair Sleeves — Compression

One Die Repair Sleeve AAC, AAAC, ACAR and ACSR Conductors

ALUMINUM

RS1700

Two piece repair sleeve is used to restore electrical and mechanical integrity to conductors with damage to strands in the outer layer only.

If damage extends to the inner layer of aluminum or alloy strands, a full tension Extra Long XL repair splice should be used.

Material: Body – aluminum alloy

(1) Install with Fargo® type UJC or, for lowest resistance repair, type HTJC inhibitor compound.

(2) Repair sleeves are EHV rated where conductor is 1.0 in (25.4 mm) O.D. or larger.

(3) Repair sleeves are suitable for EHV applications on conductors over 1 in O.D.

(4) Standard hex dies not available for some sleeve and conductor combinations. If no AH die listed for conductor, use only the CD die shown.

Repair Sleeves — Compression

One Die Repair Sleeve ACSS Conductors

ALUMINUM

RS1700SSAC

Two-piece repair sleeve is used to restore electrical and mechanical integrity to conductors with partial damage to aluminum strands.

The repair sleeves listed below will restore damaged ACSS cables where the damage section is not longer than 20% of repair splice length before crimping; and at least 50% of the aluminum strand and 100% of the steel core are undamaged.

Material: Body – aluminum alloy

NOTE: Conventional (AH Die) jumper terminals in catalog number series 33XXX listed separately. To specify stainless steel hardware add "SS" to catalog number. Example: JTS12SS

(1) Compact AAC and ACSR/TW conductor terminal diameter ranges are the lower of the dual listings.

(2) These terminals also approved for minimum tension applications on AAAC and ACAR conductors within the diameter ranges.

Jumper Terminals

Compression 15° Pad AAC, AAAC, ACAR and ACSR Conductor Jumper Terminal

ALUMINUM

JTF

Jumper terminals are prefilled with inhibitor. Tongue holes have NEMA spacing. Standard hardware includes one aluminum ½ - 13 bolt, nut and two aluminum washers per .56 diameter hole.

Jumper terminals for conductors 1.00 inch diameter or larger are EHV rated.

Material: Terminal – seamless extruded aluminum alloy tube
Hardware – aluminum alloy

NOTE: Install with Fargo type UJC or, for lowest resistance connection, type HTJC inhibitor compound. Tees are suitable for EHV applications on conductors over 1.0 in (25.4 mm) O. D.

(1) These tee taps also approved application on AAAC and ACAR conductors within the diameter ranges listed.

(2) Hex dies not available for some sleeve & conductor combinations. If no AH die listed for conductor, use only the CD die shown.

Tee Connectors

Joint Compound/Inhibitor

Distribution/ Transmission/Substation Electrical Joint Compound

HTJC

Anderson®/Fargo® Versa-Seal® High-Temperature Joint Compound (HTJC) is a synthetic-based, gritted, high-temperature compound developed for use on two-piece compression fittings on ACSS conductors rated 250° C.

HTJC employs conductive grit and thermally conductive filler to reduce connection resistance and allows connectors operate at cooler temperatures.

This electrically and thermally conductive compound is also ideal for use on standard aluminum conductor (AAC and ACSR) fittings including Fargo® Uni-Grip® deadends, splices and terminals.

HTJC fills internal voids in compression and bolted joints, sealing out moisture. HTJC is also an excellent choice for pad-to-pad applications as the grit is very fine and conductive.

See Application Guide on next page for more information.

See joint compound requirements by conventional compression fitting type in table below.

Fargo Hi-Temperature Joint Compound (HTJC) Amount Required (Pounds Per Fitting)

Dampers

Vibration Damper 4R Stockbridge

Fargo® 4-R vibration dampers effectively prevent fatigue damage to conductor and static wires caused by wind-induced aeolian vibration.

The 4-R concept improves on the design of the basic Stockbridge damper, significantly increasing the efficiency of converting wind-induced energy into heat. The improved design employs unequal weights on messengers of unequal length. This configuration doubles the number of resonant peaks from two generated by the old-style Stockbridge damper to four in the improved Fargo 4-R. These additional resonant peaks create an envelope of dynamic response that protects the conductor through the entire range of dangerous vibration frequencies.

To assure maximum performance, Fargo utilizes a sophisticated computer simulation whose development has been verified by decades of testing and field measurements. This computer model identifies the optimum damper placement on the span.

Fargo 4-R Vibration Damper System Provides You...

Maximum Protection From Wind-Induced Conductor Bending Strain

The four-resonant peaks include two separate cantilever response modes and two separate rotational response modes of the weight and messenger cable. These peaks also provide maximum energy dissipation to reduce strain over the entire spectrum of dangerous wind velocities.

- Wide frequency response range optimizes protection of your system
- Large 19 strand wire and tight strand lay dissipate energy more efficiently
- Press fit permanent weight attachment technique assures long-term performance
- Contoured surfaces prevent corona discharge

Comprehensive Application Program for Optimum Performance

Provides precise selection and placement through our proprietary computer simulation

- Computer program based on a mathematical model verified by decades of laboratory testing and field vibration measurements
- Precisely identifies the vibration performance characteristics of transmission lines
- Determines dangerous tension levels for existing or proposed spans
- Identifies the frequency range, tension level and span lengths requiring damper protection
- Identifies proper damper placement for required vibration energy dissipation
- Results of the above analysis for conductors and shield wires are available online at: <http://hpsapps.com/damper2>
Fargo 4-R Damper Application Software
- See the Reference Materials section of this catalog for a detailed program description.

Dampers

Vibration Damper 4R Stockbridge

Messenger Cable: Materials and stranding are selected to obtain the best energy absorption characteristics. The galvanized steel messenger is manufactured to rigid engineering standards.

Clamp: The bolted clamp permits easy installation on a wide range of conductor sizes. Aluminum clamping bolt ensures that damper clamp remains tight as conductor temperature changes with current load cycling.

Fargo® 4-R vibration dampers effectively prevent fatigue damage to conductor and static wires caused by wind-induced aeolian vibration.

Weights: Uniquely shaped so that the resonant peaks are effectively distributed over the desired frequency range. All weights are given a corrosion-resistant finish and have smooth surfaces and rounded edges to eliminate possible corona discharge.

(1) To specify Torque Head/Break Away bolt option, add suffix "O" to catalog number.

(2) Recommended conductor/cable size range limits. Physical clamp range may be slightly larger.

Dampers

4-R Damper Installation Instructions

NOTE: Dampers shall be located from the center of the damper clamp to either the dead end or the suspension support as shown above. The orientation of the damper weights along the conductor is optional. For convenience, orient the damper such that the clamp bolt head faces the installer. When only one damper is required per conductor per span, it can be installed at either span extremity when the support hardware is identical. When support hardware differs, place the damper at the suspension structure. When two dampers are required per conductor per span, the preferred placement is one at each span extremity.

Armor Rods & Line Guards

Industry Competitive

- Price, quality & lead time
- Look, feel & function
- ACSR/ACSS; ACSR/ACSS TW; AAC, AAAC; ACAR

Production

- EHV rated, made to order
- Inventory available for popular sizes
- Sample orders welcomed

Product Specs

- Aluminum Alloy
- Right Hand Lay
- Ball Ends $\geq 0.250"$
- Chamfered Ends $< 0.250"$
- Add "E" Suffix for EHV Rod End
- Add "D" Prefix for Double Supported Length (For rod diameters $< 0.25"$ only)

Armor Rods & Line Guards

Materials:

Rods – manufactured from either aluminum covered steel, aluminum alloy or galvanized steel

Color code and center mark – establishes alignment of rods during application and identifies conductor size

Identification tag – identifies catalog number and conductor details

Industry Knowledge:

Armor Rods and Line Guards have overlapping purpose – to protect conductors from fatigue-damage by providing a stiffening support for suspended conductors. They also protect from abrasion-damage at attachment points by providing a buffer between the conductor and the clamping connector. They are both made up of sets of individual rods of the same diameter. When installed, the set of individual rods grip rigidly onto their respective conductors. Once each rod of the respective set has been installed, the set should evenly enclose the conductor along the length of the rods.

Physically, the line guard sets are shorter in length and the individual rods are smaller in diameter. The application for line guards is typically found on light transmission lines with shorter spans, smaller conductor sizes and lower voltages. Armor Rods are recommended for applications where the conductor is clamped or suspended with bolted type connectors.

Product Offerings:*

- Aluminum Armor Rods
- Aluminum Line Guards
- Aluminum Protector Rods
- Galvanized Steel Rods
- Alumo-Weld® Steel Rods

- EHV @ 250° C for respective suspension clamp & conductor application*
- Application O.D. = (Rod O.D. X 2) + Conductor O.D.

General Recommendations

Armor Rods

1. Fargo® Armor Rods are intended to protect conductors from stress and damage which can be caused by a bend, compression, abrasion or arc over. They are also designed to repair conductors which have sustained < 50% outer strand damage.*
2. Armor Rods should be considered as minimum protection for clamp style supports or suspension hardware for spans > 300 feet.
3. Armor Rods are designed to provide an extra degree of protection to the conductor at support points, **not act as vibration dampers**. In areas where vibration is suspected or known to occur, the use of Fargo® 4-R Dampers is recommended.

Line Guards

1. Fargo® Line Guards are intended to provide an extra degree of protection for the conductor against abrasion and arc over. They are also designed to repair conductors which have sustained < 25% outer strand damage.*
2. Line Guards should be considered as minimum protection for hand-tied spans ≤ 300 feet in urban areas with no history of vibration.
3. Line Guards should be considered as a cost saving alternate to Armor Rods when applicable. Note: HPS Distribution Ties are recommended as an improvement over Line Guards and hand ties, providing a stronger and more uniform tie.

*The degree of protection required is dependent upon line design, tension, temperature, and wind conditions. Contact HPS Connectors Business Unit for specific recommendations.

Conductor Protection — Armor Rods

For use on stranded aluminum and aluminum composite conductors, including high-temperature conductor designs.⁽⁴⁾

NOTES:

- (1) Right-hand lay standard.
- (2) For aluminum conductor types & sizes not listed above, select rod set based on dia. range to accommodate conductor.
- (3) Applied O.D. of conductor with rods, for suspension clamp selection, equals conductor diameter plus two times rod dia.
- (4) Maximum conductor temperature limits vary with suspension clamp designs. See catalog Reference Data section for guidelines.

Conductor Protection — *A armor Rods*

For use on stranded aluminum and aluminum-composite conductors, including high-temperature conductor designs.(4)

For EHV applications, add suffix "E" to catalog numbers to Specify. Example AP8146E

ALUMINUM

AP8

Material: *aluminum alloy*

NOTES:

- (1) Right-hand lay standard.
- (2) For conductor/cable sizes not listed above, select rod set based on cable dia. range.
- (3) Applied O.D. of conductor/cable with rods equals cable diameter plus two times rod diameter.
- (4) Maximum conductor temperature limits vary with suspension clamp designs. Consult factory for information.

Peace of Mind

Hubbell Power Systems' (HPS) customers know that their hardware requirements — from metallurgy to finished product — are not only designed and manufactured with the utmost precision and electrical integrity, but they come together quickly and efficiently as well.

With a full spectrum of tower hardware, this section lists Hubbell's standard transmission tangent, angle, deadend, and jumper assemblies which include Anderson™ and Fargo® Connectors and Quadri*Sil™ Insulators. The assemblies are grouped by voltage (Standard or EHV), number of conductors, general assembly type, and strength of insulators. See Table of Contents for further clarification.

Each assembly is defined by a Base Assembly Catalog Number which includes all items in the bill of material chart shown. However, this assembly number alone will not specify an exact bill of material until final customer-specific information is provided, i.e., Tangent assemblies require the customer to provide conductor and specific voltage information to select the exact suspension clamp and insulator to be included.

For your convenience, a tabulated chart is included which provides the most common insulator part number for each applicable voltage for that given assembly. Please see quoting and ordering instructions below.

For Quotes and Ordering

1. Select Base Assembly based on Voltage, Number of Conductors, Assembly Type, and Insulator String Strength.
2. Specify Conductor Size, Type and Stranding to be used (e.g., 795 kcmil, ACSS, 26/7).
3. Specify whether armor rods or line guards will be used on the conductor.

NOTE: The suspension clamp/deadend assembly, armor rods/line guards (if required), and the specific insulator will be chosen by HPS based on selection criteria provided by the customer.

Tangent Suspension, Single Conductor

Single-String 30k lb Assembly, 69kV - 230kV

Conductor Pulling Sleeves

Features

- Prevents conductor steel core slip during wire pulling of ACSS, ACSS/TW and ACSR/SD conductors.
- Helps to prevent conductor damage and costly re-stringing operations
- Cuts wire stringing time to achieve a secure grip on wire under stringing tension

Kellems® Pulling Grip

Aluminum and Bronze Connectors — Alloys, Connectors, Hardware & Installation

In over 100 years of serving the electrical industry, Anderson and Fargo have earned a reputation for being creative leaders in the design and manufacture of electrical connectors, fittings and related accessories. The acceptance of these responsibilities is best exemplified through our wholly self-sufficient facilities. Design Engineering, Testing and Metallurgical Laboratories, and all facets of Manufacturing are geared for research, development and production of a full line of quality bronze, aluminum and ductile iron products.

The following information conveys helpful reference for material composition, installation, standardization and definitions applying to connectors and fittings as developed during our years of experience.

Aluminum Connectors

Aluminum Alloys:

Connectors and fittings requiring high mechanical properties are cast from aluminum alloy 356. Sand cast 356 is heat treated to the T6 temper, and permanent mold castings are heat treated to the T61 temper. The 356 alloy is a 7 per cent silicon—0.3 per cent magnesium-aluminum alloy. The alloy is not susceptible to stress corrosion or season cracking. Its volume conductivity is approximately 39 per cent, I.A.C.S.

Cast compression connectors requiring a soft high conductivity aluminum are supplied from 99 plus per cent pure aluminum. Other aluminum compression connectors are made from commercially pure high conductivity wrought aluminum.

Installation Recommendations For Aluminum Connectors

Select type of connector from those listed below and follow the indicated procedure.

CONNECTOR TYPE	INSTALLATION PROCEDURE
Bolted	Procedure #1
Compression	Procedure #2
Compression and Bolted ...	Procedure #2 followed by Procedure #1

PROCEDURE #1—BOLTED CONNECTIONS

- A. For aluminum to aluminum connections.
 - 1. Vigorously clean all contact surfaces of the connector and conductor with a stiff stainless steel wire brush to remove oxides. A typically bright aluminum surface should be obtained.
 - 2. Immediately coat these contact areas with a generous amount of contact sealant.
 - 3. Install fitting with bolts finger tight. If a generous bead of compound does not appear, remove the conductor and add more sealant.

- 4. Alternately (criss-cross) and evenly tighten bolts with a torque wrench to the values shown on page 6.
- 5. Excess sealant squeezed out of joint can be left as is or can be lightly smoothed along contact line.
- 6. All excess sealant must be removed from EHV Connectors and entirely from cable insulation.

PROCEDURE #2—COMPRESSION CONNECTIONS

- 1. Vigorously clean the conductor contact area with a stainless steel brush. Single-die connectors will have joint compound/inhibitor applied at the factory.
- 2. Fully insert the conductor into the barrel and crimp. Crimping should begin nearest the center of sleeve type connectors. For closed barrel type connectors crimping should begin at the closed end and work toward the open end. Excess joint compound/inhibitor squeezed out of the connector must be removed from EHV Connectors or any cable insulation.

Installation Recommendations for Aluminum to Copper Connections Using Aluminum Connectors

Connectors with contact sealant—Aluminum connectors can be used for making aluminum to copper connections if the proper installation care is observed. This includes the use of a sealant in accordance with practices outlined above. Use of a sealant protects the connection from oxide formation and electrolytic corrosion for as long as it remains present in the connection completely coating the surfaces and sealing out moisture.

Added protection in addition to sealants is available. Aluminum distribution connectors can be supplied with plating or with copper lined contacts.

Bi-Metallic Transition Plates—Aluminum to copper connections between flat NEMA drilled tongues and bars can be made using transition plates (Type TP). These plates are formed from sheets of 80% aluminum 20% copper which are molecularly bonded together. Best results are obtained by using contact sealant. Always position the aluminum conductor above the copper conductor.

Tin Plating—Tin plating can be furnished on certain connectors by adding suffix “GP” to the catalog number, aluminum distribution.

Hardware—Anodized Aluminum Clamping Bolts are standard with most Aluminum Power Connectors assembled at factory. The bolts are fabricated 2024-T4, 2014-T4 or equal aluminum and are anodized. After anodizing, the coating is sealed with a dichromate solution which imparts a yellow-green finish.

Standard nuts furnished on aluminum bolts are 6061 T6 dry waxed coated.

Insulator attachment hardware for bus supports is galvanized steel.

Bronze Bolted Clamps

Bronze bolted deadend and suspension clamps require high tensile strength and corrosion resistance in application are cast from Anderson Alloy 112 (ASTM B-30 Alloy No. C95500). The 112 alloy is a 10% aluminum, 4.5% nickel copper alloy with a minimum tensile strength of 90,000 PSI.

Contact Sealants, Inhibitors and Joint Compounds—Various sealant formulations have been developed to provide improved electrical and mechanical performance as well as environmental protection to the contact area. Non-petroleum base sealants are provided for underground applications and other applications where natural or synthetic rubber goods might be adversely affected.

Non-gritted sealants, generally referred to as joint compounds, are recommended for flat connections and as a groove sealant in bolted connectors.

Our gritted sealants are primarily used in compression connectors. Aluminum single-die compression connectors have sealant applied at the factory.

See Joint Compound / Inhibitor catalog section for details.

Recommended Types of Hardware and Installation Mounting

Hardware for Joining Like or Unlike Metals

If "A" BAR is	Cu	AL	AL	Galvanized Steel	Galvanized Steel
and "B" BAR is	Cu	Cu	AL	Cu	AL
Recommended Series of Hardware	(1) Si-Br (2) SS (3) GS	(1) SS or GS	(1) AL (2) SS or GS	(1) Si-Br (2) SS or GS	(1) AL (2) SS or GS

KEY:

Si-Br—Silicon Bronze GS—Galvanized Steel
 SS—Stainless Steel AL—Aluminum
 (1) denotes preferred hardware usage.

NOTE:

Contact sealant should be used between Aluminum to Aluminum and Aluminum to Copper connections.

Aluminum Connectors

Aluminum Connector (Clamping Hardware)

Aluminum To Aluminum Assemblies (Tongue Mounting Hardware As Assembled At Factory)

Aluminum To Copper Assemblies (Tongue Mounting Hardware)

Bronze Connectors

Bronze Connector (Clamping Hardware)

Bronze To Copper Assemblies (Tongue Mounting Hardware)

Recommended Torque Values for Bolted Connectors

Tightening Force Applied to Hardware: Following are ANDERSON'S recommended torque values applying to all clamping hardware used in connectors and fittings.

NOTE:

Care should be taken to prevent sealant from being applied to hardware since torque values will be affected if the hardware becomes lubricated with sealant.

Bolt Dia.	Recommended Torque Non-Lubricated Steel & Silicon Bronze Hardware lb. inches	Recommended Torque Lubricated Hardware & Aluminum Hardware lb. inches*
5/16"	180	120
3/8"	240	168
1/2"	480	300
5/8"	660	480
3/4"	840	720

*Reduced torque limits apply when replacing aluminum clamping hardware with steel in bolted aluminum connectors.

Ampacity Ratings of Anderson & Fargo

Heavy Duty ⁽¹⁾ Bolted Pad Connectors Compression, Welded and Close-Fit Bolted Designs

Product Data and Conductor Size					
Bolted Pad		Bolts ⁽²⁾		Ampacity (A) ⁽⁴⁾	
Dimensions (in)		Number	Size (in)	Inhibitor Type	
Width	Length			Standard	HTJC ⁽³⁾
1.5	3.0	2	0.5	1220	1400
2.0	3.0	2	0.5	1260	1450
3.0	3.0	4	0.5	2450	2825
4.0	4.0	4	0.5	2580	3000
6.0	4.0	6	0.5	3825	4400

NOTES:

- (1) Heavy duty connectors are defined as having continuous cross section about the periphery of the conductor and through the pad, equal to or greater than 125% of the conductor.
- (2) Ratings assume use of steel clamping bolts and Belleville spring washers. Higher ampacity ratings can be achieved if conductive bolts, nuts and washers are used.
- (3) HTJC is the Anderson/FARGO conductive grit joint compound, recommended for maximum conductivity in compression and bolted pad joints.
- (4) Ratings are based on conductor temperature of 90°C in 40°C ambient, 2 ft/sec. cross wind.

Suggested method of mounting connectors

CFSHT	Suspension Clamp, Hi-Temp Aluminum	200	250	250
TSCHT	Suspension Clamp, Trunnion, Hi-Temp Aluminum	150 ⁽³⁾	250	200 ⁽³⁾
97642/JLC	Jumper clamp single conductor clamp to post insulator	150 ⁽³⁾	250	200 ⁽³⁾
271	Jumper clamp assemblies, bundled conductor	250	250	250

NOTES:

- (1) AAC, AAAC, ACAR & ACSR compression connectors installed with standard joint compound, FARGO type UJC.
- (2) ACSS compression connectors installed with FARGO hi-temp, conductive-grit joint compound, FARGO type HTJC.
- (3) Limited by 80 deg C max requirement for clamptop end fitting on line post insulators.
- (4) These connectors, when properly installed with Fargo type UJC compound can be used on ACSR conductors up to 130° C or, with Fargo type HTJC compound on conductors up to 180° C. However, the aluminum conductor strands will anneal above 93 deg C. This annealing effect is cumulative and will, over time, reduce the available tension strength to that of the steel core.

Letter Suffix Designations to Standard Catalog Numbers for Special Features

A suffix added to a catalog number denotes a change or modification is to be made to the standard catalog item. Suffixes listed below do not include special customer-specific modifications but only those having general application.

Bolted Connectors	
Catalog No. Suffix	Description of Change or Modification
ANCO	Galvanized Steel ANCO® Locknut
BNK	Bolt, nut and cotter key will be supplied instead of usual clevis pin.
BNN	Bolt, nut and jam nut will be supplied instead of usual clevis pin.
BW	Belleville washers will be supplied instead of usual washer.
C	A clevis fitting will be supplied with strain, suspension and dead end clamps.
CRF	Corona free strain clamp.
FW	A flatwasher will be supplied instead of a lockwasher.
GA	Galvanized hardware will be supplied instead of usual hardware.
LN	A locknut will be supplied instead of usual hardware.
LW	A lockwasher will be supplied instead of a flatwasher.
N	Neither socket nor clevis fittings will be supplied with suspension, or dead end clamps.
S	A socket will be supplied with suspension and dead end clamp
SP	The catalog number specified is to be modified for particular requirement which the item will not otherwise fill. (Special)
UD	An undrilled tongue will be supplied on terminals or lugs
X	A hex nut will be supplied with shackles instead of usual jam nut.
XB	The connector will be supplied with the grooves coated with a petroleum based sealant and enclosed in a polyethylene bag.

Compression Connectors	
Catalog No. Suffix	Description of Change or Modification
NT	No Terminal. Assembly is supplied without Terminal.
NP	No Pad. Assembly is supplied without NEMA pad.
NPNT	No Pad; No Terminal. Assembly is supplied without NEMA Pad and without Terminal.
SS	Stainless Steel hardware is supplied instead of usual hardware.
XL	Extra Length for repair application. One-Die Unigrip product offerings.
1	Single Piece Gripping Unit identifier for One-Die Unigrip product offerings.
P4	4-Hole pad instead of 2-Hole pad.
A253	Special conductor size.
BSP	Bar Stock Pad identifier.
HT	High Temperature Application Identifier.
SSAC	Designed for ACSS Conductor.
STW	Designed for ACSS/TW Conductor.
SW	Shield Wire Connector identifier.
SWD	Shield Wire Deadend Connector Identifier.
S	Two Hole Pad - Vertical Eye; Shield Wire Deadend.
SH	Two Hole Pad - Horizontal Eye; Shield Wire Deadend.
J	U-Bolt Jumper Pad - Vertical Eye; Shield Wire Deadend
JH	U-Bolt Jumper Pad - Horizontal Eye; Shield Wire Deadend.

About Hubbell Power Systems

Hubbell Power Systems (HPS) manufactures a wide variety of transmission, distribution, substation, OEM and telecommunications products used by utilities. HPS products are also used in the civil construction, transportation, gas and water industries. Our product line includes construction and switching products, tools, insulators, arresters, pole line hardware, cable accessories, test equipment, transformer bushings and polymer precast enclosures and equipment pads.

Because Hubbell has a policy of continuous product improvement. We reserve the right to change design and specifications without notice.
