SMART SWITCH INSTALLATION

Ground

Hot

Load (eg. Light)

Neutral

For multi-way installations only

1 Turn off power at your breaker

2 Identify the wires

3 Remove the existing switch
(it may be helpful to take a photo of how the old switch was wired)

4 Wire the smart switch

1. Connect the smart switch white NEUTRAL wire to the neutral wire(s) in the box (there may be several). Twist and cap them off with the red wire nut.
2. Connect the smart switch LOAD wire on the load wire in the box.
3. Connect the smart switch HOT wire to the hot wire(s) in the box.
4. Connect the smart switch green GROUND wire to the ground wire(s) in the box.
5. Cap the yellow traveler wire with a wire nut. If more than one switch controls the light, then conned the smart switch yellow TRAVELER wire to the wire going to the other switch.
NOTE: The smart switch will work with existing 3-way switches and can be installed in either location.

5 Test the smart switch

6 Download the Legrand Smart Lights app

1. Login or Create a Legrand account to enable control from your phone.
2. Click add a device and scan the barcode on the front of the device to connect the device to the app.
