

INSTALLATION INSTRUCTIONS DUAL SLIDE DE-HUMMER® FAN CONTROL AND INCANDESCENT LIGHT DIMMER WITH PRESET

READ AND SAVE THESE INSTRUCTIONS!

DE-HUMMER® FAN CONTROL AND DIMMER

Installation Instructions for New Construction

Single Pole/3-Way 3 Speed De-Hummer® Fan Control: 1.6A, 120VAC, 60Hz
300W Single Pole/3-Way Incandescent Dimmer: 120VAC, 60Hz

WIRING AND INSTALLATION DIAGRAMS BELOW

CAUTION: To be installed by a certified electrician or other qualified person. To prevent severe shock or electrocution, always turn power OFF at the service panel before installing this unit. Use only copper or copper clad wire with this device. Use with paddle fans only. Use with incandescent lamps only. Do not exceed the maximum wattage of the dimmer or the maximum amperage of the fan control. To reduce the risk of overheating and possible damage to other equipment, do not install to control a receptacle, a fluorescent lighting fixture, a motor operated appliance, or a transformer supplied appliance.

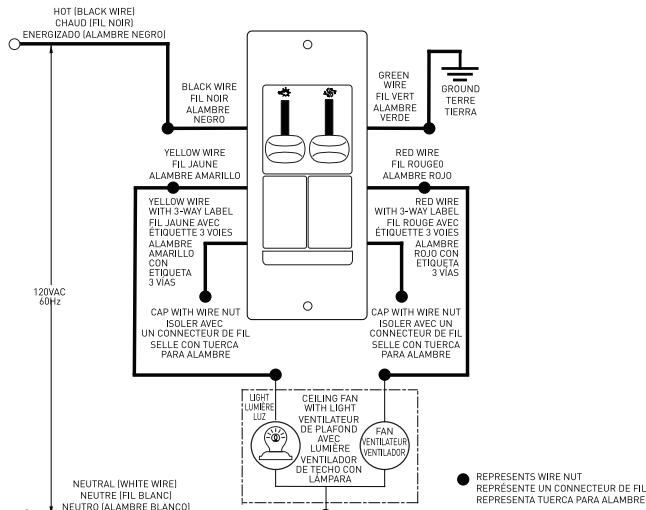

GANDING MULTIPLE DIMMERS – This Control may be ganged together without derating. Fan speeds vary by manufacturer. Some fans may turn too slowly at the lowest setting. The light dimmer requires a minimum 25 watt load for proper operation.

Attention: In most retrofit applications, it is necessary to add an additional wire from the Control to the Fan. This is necessary to achieve independent control and maximize the versatility of the Fan & Light. The additional wire should not be confused with the Neutral wire, usually White, nor the Ground wire, normally Bare or Green. Retrofit installations should be done only by a certified electrician.

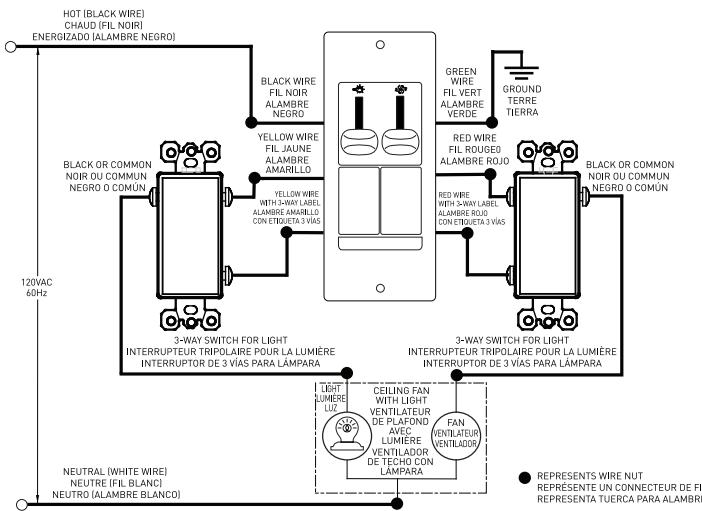

INSTALLATION INSTRUCTIONS:

- Prior to installation, set the fan to its highest speed and the light to its brightest setting.
- Disconnect power to the circuit.
- Strip installed wires per the chart below.
- Connect the Control's wires to installed wiring as shown in the Wiring Diagram using the wire connectors provided.
- Mount the Control to outlet box using mounting screws provided.
- Attach the wall plate to Control using colored mounting screws provided.
- Set the fan control to its OFF (lowest) position.
- Restore power to the circuit.
- Test the installation by operating the Control according to the Operating Instructions below. Be sure the fan starts and does not stall in any of the ON positions. The best operation may be obtained by starting the fan in the highest setting and then moving the control to the desired speed. Do not allow the fan to remain stalled. This may overheat the fan. DO NOT USE THE PULL CHAIN TO CONTROL THE FAN SPEED AFTER INSTALLATION OF THIS CONTROL.

OPERATING INSTRUCTIONS:

Toggle the light or fan switch provided to turn the respective unit **ON** or **OFF**. To change lighting level or fan speed, slide the respective knob up or down until desired level is reached.

Use only copper or copper clad wire with this device.

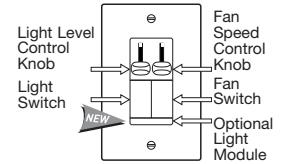

LIGHT MODULE:

Sold separately, Catalog #TM8LMCC

Transform in minutes a standard dimmer into an illuminated dimmer (ON when light is OFF) – allows the dimmer to be found in the dark.

Average 20-year life expectancy.

No wiring – quick snap-in installation.

IMPORTANT NOTES:

- All Fan Speed Controls can be damaged by improper wiring. Check for short circuits prior to installing the fan speed control.
Procedure for short circuit check:
 - Disconnect power to circuit by removing fuse or turn circuit breakers OFF.
 - Install a switch instead of the fan speed control. Turn the switch to the "ON" position.
 - If the fan fails to turn ON and OFF with the switch, the wiring may be incorrect.
 - Correct wiring, if necessary and retest.
 - Install the fan speed control only after the fan operates properly with the switch.
- Protect from dirt and dust. The Fan Speed Control can be damaged from contaminants encountered during the construction process. The control should not be installed until the construction process is complete.

Any Fan Speed Control damage due to improper installation is not covered under warranty.

WIRE CONNECTOR USAGE CHART		
CONNECTOR	WIRE COMBINATIONS	WIRE STRIP LENGTH
LARGE	1 #14 + 1 #18	7/16" (11mm) for Solid wire 1/2" (13mm) for Stranded wire
SMALL	1 #18	3/8" (9.5mm) for Solid wire

Strip wires per chart. Align ends. Push wires firmly into connector. Screw connector securely onto wires. Note: The Control is supplied with #18 wire.

LIFETIME WARRANTY

The device you have purchased is warranted under normal use against defects in workmanship and materials for as long as you own the device. If the device fails due to manufacturing defect during normal use, return the device for replacement to the store where purchased or send to:

Pass & Seymour Legrand Consumer Division
50 Boyd Avenue, Syracuse, NY 13209

All requests for replacement must include a dated sales receipt (legible copies acceptable). ALL OTHER WARRANTIES, INCLUDING BUT NOT LIMITED TO ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, ARE LIMITED TO A PERIOD OF TWO YEARS FROM THE DATE OF PURCHASE. YOUR SOLE AND EXCLUSIVE REMEDY AGAINST PASS & SEYMOUR LEGRAND UNDER ANY WARRANTY SHALL BE THE EQUIVALENT REPLACEMENT OF THE DEVICE. IN NO EVENT SHALL ANY WARRANTY APPLY TO ANY DEFECT ARISING OUT OF ANY ALTERATION OF THE DEVICE, IMPROPER WIRING, IMPROPER INSTALLATION, MISUSE, ABNORMAL USE OR NEGLIGENCE. IN NO EVENT SHALL PASS & SEYMOUR LEGRAND BE LIABLE FOR LOST PROFITS, INDIRECT, SPECIAL, EXEMPLARY, INCIDENTAL OR CONSEQUENTIAL DAMAGES. Some states do not allow limitations on how long implied warranties last and do not allow exclusion or limitation of incidental or consequential damages. Some of the above limitations or exclusions may not apply to every purchaser.

INSTRUCTIONS EN FRANÇAIS

INSTRUCTIONS D'INSTALLATION CONTROLEUR DE VENTILATEUR ET GRADATEUR POUR LAMPES INCANDESCENTES, À DEUX CURSEURS AVEC PRÉRÉGLAGE

LIRE ET CONSERVER CES INSTRUCTIONS

GRADATEUR ET CONTRÔLEUR DE VENTILATEUR DE-HUMMER®

Instructions d'installation pour les nouvelles constructions

Contrôleur de ventilateur De-Hummer® 3 vitesses, unipolaire/3 voies :
1,6 A, 120 VCA, 60 Hz

Gradateur unipolaire/3 voies pour lampes incandescentes de 300 W :
120 VCA, 60 Hz

MISE EN GARDE : Doit être installé par un électricien certifié ou une autre personne qualifiée. Pour éviter tout choc électrique ou une électrocution, toujours couper l'électricité au niveau du panneau d'alimentation avant d'installer ce dispositif. N'utiliser ce dispositif qu'avec des fils en cuivre ou cuivrés. N'utiliser qu'avec des ventilateurs à pales. N'utiliser qu'avec des lampes incandescentes. Ne pas dépasser la capacité maximale du gradateur ou l'ampérage maximal du contrôleur. Pour éviter toute surchauffe et endommagement éventuel des autres appareils, ne pas utiliser pour contrôler une prise, une lampe ou un tube fluorescent, ou encore un appareil ménager équipé d'un moteur ou alimenté par un transformateur.

GROUPEMENT DE PLUSIEURS GRADATEURS – Ce contrôleur peut être combiné à d'autres dispositifs sans modifier sa puissance nominale. La vitesse des ventilateurs varie selon le fabricant. Certains ventilateurs peuvent tourner trop lentement dans la position la plus lente. Le gradateur doit avoir une charge de 25 watts minimum pour fonctionner correctement.

Attention : Dans la plupart des applications de mise à niveau, il est nécessaire d'ajouter un fil entre le contrôleur et le ventilateur. Ceci est nécessaire pour assurer un contrôle indépendant et maximiser la souplesse d'utilisation de la lampe et du ventilateur. Ce fil supplémentaire ne doit pas être confondu avec le fil du neutre, habituellement blanc, ou le fil de terre, habituellement nu ou vert. Les installations de mise à niveau doivent être effectuées par un électricien certifié uniquement.

INSTRUCTIONS D'INSTALLATION

- Avant l'installation, régler le ventilateur à sa vitesse la plus élevée et la lumière à son intensité maximale.
- Couper l'alimentation du circuit.
- Dénuder les fils installés selon les indications du tableau ci-dessous.
- Raccorder les fils du gradateur aux fils installés comme indiqué sur le Diagramme de câblage en utilisant les connecteurs de fils fournis.
- Fixer le contrôleur sur la boîte à l'aide des vis de fixation fournies.
