*Indicates Shared Parameter and can be scheduled

Loading and Placing into the Project

One "Electrical Fixtures" family is supplied and can be loaded into a Revit project through all traditional methods. The device plate requires a host to be placed within the project (i.e. raceway). Also, ensure that the visibility settings within the project are modified to have the Electrical Fixtures category visible.

Project Behavior

Within the type properties, the user will find useful information about the product by following the URL links given. The user will also find family revision information, Wiremold copyright information, part description, product URL and other specific data. *See scheduling description below.

Each device plate includes 'Snap Locations' for device placement on the plate.

Refer to product documentation for more information regarding included hardware, device plate intended location, requirements, sizes and options.

Instance Parameter

In the "Instance Parameters", the user has the following options to modify:

Equipment Number - For tagging each placed instance.

Has Snap Locations - Turns off/on the crosshairs for placing devices on the device plate.

Type Parameter

Each type represents a manufactured product. Therefore, the type parameters should not be modified by the user for standard configuration. Please note:

Product Documentation Link - Directs a webpage to the products online listing.

Equipment Abbreviation - For filtering schedules. *See scheduling description below.

Visibility

For best performance, all model geometry is turned off in all views and represented through masking regions and symbolic/model lines that update automatically when a user changes view properties.

Rendering

When the family file is loaded into the project, standard Wiremold materials are imported. These may be modified, though ensure that the modification selection matches an actual manufacturer supplied option.

Schedule Creation

Wiremold products may be scheduled utilizing the schedule view in the given project file. Select and copy (Ctrl-C) the schedule from the sheet view and paste it (Ctrl-V) into a sheet in your project. The schedule filters are set to look for only those units designated with Manufacturer as "Wiremold" and Equipment Abbreviation as "DP". The schedules contain special functionality for displaying the configured order numbers of the selected types.
