Steps for Selecting a Pressure Switch

The deciding factors in the selection of a pressure switch for use on control circuits¹ depend on the requirements of the application. Consider the following requirements to help determine the appropriate catalog number for your application.

1. **Setpoints:** Do you want to control/monitor one setpoint or two?

- One setpoint: fixed differential
- Two setpoints: adjustable differential

Fixed differential

2. **Fluids:** What fluids do you want to control?

- Hydraulic oil, air, fresh water ≤ 70 °C (158 °F)
- Steam
- Hydraulic oil, air, fresh water ≤ 160 °C (320 °F)
- Corrosive fluid ≤ 160 °C (320 °F)
- Sea water ≤ 70 °C (158 °F)
- Viscous fluid ≤ 160 °C (320 °F)
- Sea water ≤ 160 °C (320 °F)

Adjustable differential

Ensure that the wetted parts of the switch are compatible with the system fluid.

3. **Pressure Range:** What pressure range does the system experience?

Note: Select pressure settings that fall within the middle 80% of the pressure range. The pressure applied during a normal cycle should never exceed the maximum range value listed for the switch. Pressure surges should be less than the maximum allowable pressure listed for the switch.

Rated Pressure	
psi	bar
0 to 0.725	0 to 0.05
0 to 5.075	0 to 0.35
-14.5 to -4.06	-1 to -0.28
-14.5 to -2.03	-1 to -0.14
-2.9 to -0.029	-0.2 to -0.02
-7.25 to 72.5	-0.5 to 5
0 to 14.5	0 to 1
0 to 36.25	0 to 2.5
0 to 58	0 to 4
0 to 145	0 to 10
0 to 290	0 to 20
0 to 507.5	0 to 35
0 to 580	0 to 40
0 to 1015	0 to 70
0 to 2320	0 to 160
0 to 4350	0 to 300
0 to 7250	0 to 500

4. **Surges:** How frequent are surges in your system, and what is their maximum pressure level? Applications experiencing frequent or high-pressure surges may require a device with a higher pressure range.

¹ For switches used on power circuits, see catalog 9013CT9701, *Commercial Pressure Switches, Class 9013 Types F and G*.

-
1. **Enclosure:** What degree of enclosure protection do you need?
 - IP65
 - IP66
 - IP67
 2. **Output:** What type of output do you require?
 - Analog, 4–20 mA
 - Solid State, NPN
 - Solid State, PNP
 - Analog, 0–10V
 - AC Relay 120V
 - DC Analog, 4–20 mA, shunt calibration
 - DC Analog, 4–20 mA digital single stage
 - DC Analog, 0–10 V, shunt calibration
 - DC Analog, 0–10 V, digital single stage
 - DC digital dual stage
 3. **Electrical Connection:** What type of electrical connection do you require?
 - M12
 - Integrated quick connect
 - Delphi (Packard) Metri-Pack
 - DIN 43650A
 - 7/8 16 UN2A
 4. **Pressure Connection:** What type of pressure connection do you require?
 - 1/4" - 18 NPTF (female)
 - 1/2" - 14 NPT
 - G 1/4 BSP (female) metric thread
 - 7/16"-20 UNF-2B
 5. **Special Features:** Do you require any special features?

When switches must be factory set and only one setting is identified, specify whether this setting is on rising or falling pressure. State the switching threshold settings when ordering.

Functions

Pressure transmitters

The function of pressure transmitters is the control and measurement of pressure or vacuum levels in hydraulic or pneumatic systems. They transform the pressure into an analog electrical signal which is proportional to the pressure measured. Their high precision makes them suitable for all industrial applications requiring pressure/vacuum display, control, or regulation. Also very robust, they are equally suitable for applications involving high operating rates.

Pressure and vacuum switches

The function of electronic pressure and vacuum switches is the control or regulation of pressure or vacuum levels in hydraulic or pneumatic systems. They transform the pressure change into a digital output signal when the preset pressure or vacuum points are reached. The very wide adjustment range for the setpoints characterize these electronic switches. Their robustness, along with their excellent adherence to the set values over time, make them ideal for applications involving high operating rates. In addition, the high repeat accuracy and fast response time of these sensors make them equally suitable for applications requiring accurate pressure regulation and monitoring.

Universal sensors

Universal sensors are electronic pressure and vacuum switches with digital output, which also include an analog output identical to that of the pressure transmitters.

Operating principle

Pressure transmitters

The electrical signal from the pressure transmitter (signal proportional to the monitored pressure) is amplified, calibrated, and output as a standard 4–20 mA or 0–10 V analog signal (depending on the model).

Pressure and vacuum switches

Designed for regulation between 2 thresholds, these switches have both a high setpoint (PH) and a low setpoint (PB). Both of these points can be independently adjusted (adjustable differential). The difference (differential) between the two setpoints can be small or large. Since the switches are electronic, they have no mechanical moving parts.

Operating principle with solid-state NC outputs

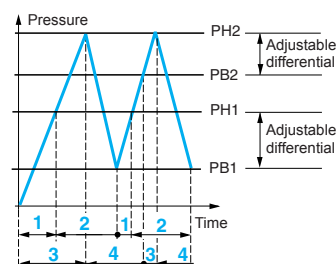

Pressure switches with digital output

— Adjustable value
PH = high setpoint
PB = low setpoint

- 1 Output on
- 2 Output off

Dual stage pressure switches

Vacuum switches with digital output

- 1 Output on
- 2 Output off

— Adjustable value
PH1 = high setpoint 1st stage
PB1 = low setpoint 1st stage
PH2 = high setpoint 2nd stage
PB2 = low setpoint 2nd stage
1 Output 1st stage on
2 Output 1st stage off
3 Output 2nd stage on
4 Output 2nd stage off

Terminology

Measuring range

The measuring range (MR) of a pressure sensor corresponds to the difference between the upper and lower values measured by the load cell. It ranges between 0 and the pressure corresponding to the size of the sensor.

Operating range

The **operating range of a pressure transmitter** corresponds to its measuring range. Within this range, its analog output signal varies between 4 and 20 mA or 0 and 10 V, and is proportional to the measured pressure.

The **operating range of a pressure or vacuum switch** is the difference between the values of the minimum low setpoint (PB) and the maximum high setpoint (PH).

Precision

This includes linearity, hysteresis, repeat accuracy, and setting tolerances. It is expressed as a percentage of the measuring range of the load cell (%MR).

The **linearity** is the maximum deviation between the real transmitted curve and the ideal curve.

The **hysteresis** is the maximum deviation between the rising pressure curve and the falling pressure curve.

The **repeat accuracy** is the maximum drift encountered at varying pressures under given conditions.

The **setting tolerances** are the manufacturer's tolerances with regard to the zero point and sensitivity (gradient of output signal curve from pressure transmitter).

Temperature drift

The precision of a pressure sensor is susceptible to variation due to the operating temperature.

Zero point drift, proportional to the temperature, is expressed as %MR/°C.

Sensitivity drift, proportional to the temperature, is expressed as %MR/°C.

Terminology (continued)

Switching point on rising pressure (PH)

This is the upper pressure setting at which the output of the electronic pressure or vacuum switch changes state on rising pressure.

Switching point on falling pressure (PB)

This is the lower pressure setting at which the output of the electronic pressure or vacuum switch changes state on falling pressure.

Differential

This is the difference between the switching point on rising pressure (PH) and the switching point on falling pressure (PB). The low point can be set at the values indicated on the operating curves shown on the product pages.

Switches with fixed differential

Depending on the switch, either the high or low operating point is adjustable, and the other operating point follows. The window is fixed.

Switches with adjustable differential

An adjustable differential allows independent setting of both operating points.

Spread

For dual-stage switches, the spread indicates the difference between the two operating points on rising pressure (PH2 and PH1) and, for vacuum switches, the difference between the two operating points on falling pressure (PB2 and PB1).

Differential-Pressure Sensing

Switches for differential-pressure sensing measure the difference between two pressures.

Size

Pressure transmitters and pressure switches

This is the maximum value of the operating range.

Vacuum transmitters and vacuum switches

This is the minimum value of the operating range.

Accuracy (switches with setting scale)

The tolerance between the point at which the switch actuates its contacts and the value indicated on the setting scale. Where very high setting accuracy is required (initial installation of the product), it is recommended to use separate measuring equipment (pressure gauge, etc.).

Repeat accuracy

This is the variation of the operating point of the pressure or vacuum switch between several successive operations, or the tolerance between two consecutive switching operations.

Drift (F)

The tolerance of the operating point throughout the entire service life of the switch.

Terminology (continued)

Maximum allowable pressure

The maximum value of an accidental pressure surge of very short duration (a few milliseconds).

Example 1: With destructive (burst) pressure level

— Without damping device
— With damping device

Example 2: With destructive (burst) pressure level and destructive pressure oscillations

Maximum permissible accidental pressure

This is the maximum pressure (excluding pressure surges) that the sensor can occasionally withstand without permanent damage.

Maximum allowable pressure per cycle (Ps)

The maximum pressure level per cycle that the switch can withstand for optimum service life.

Surge

A surge is a high rate of rise in pressure, normally of short duration, caused by starting a pump or by opening and closing a valve. Depending on frequency and duration, surge can reduce service life. Extremely high rates of rise in pressure can be damaging even if they are within the limits of the maximum allowable pressure.

Destruction pressure

Also called *burst pressure*, the destruction pressure is the pressure value which, if exceeded, is likely to cause serious damage to the sensor—such as leaking, bursting, or permanent damage.

Load resistance of pressure transmitters

The supply voltage and load resistance of a pressure transmitter must be selected according to the following formula:

$$R_{\text{load}} = \frac{U_{\text{supply}} - U_{\text{supply min.}}}{0.02 \text{ A}} \quad (U_{\text{supply min.}} = 11 \text{ V for XMLE and } 17 \text{ V for XMLF})$$

Introduction

Type XMLK pressure transmitters are characterized by their ceramic pressure-measuring cell. Deformation, caused by pressure, changes the resistance of the resistors of a Wheatstone bridge silk-screened on the ceramic. The change in resistance is then processed by the integrated electronics to provide an analog output signal.

- 1 Electrical connection: for example, DIN EN 175301-803-A connector
- 2 Seals
- 3 Threaded fluid connection
- 4 Hybrid electronics
- 5 Ceramic measuring cell

Functions

XMLK pressure transmitters have an analog output, 4–20 mA or 0–10 V, which is proportional to the measuring range.

These compact products are available with various types of electrical connectors and fluid connections.

Standard versions are available calibrated in both bar and psi. The bulk packaging alternative offers an excellent price/performance ratio. XMLK electronic pressure sensors are designed for simple pumping applications and are well suited for pump equipment manufacturers.

Environmental Specifications		
Conformity to standards		CE IEC/EN 60947-1, IEC/EN 60947-5-1 EN 50081-1, EN 50082-2, EN 61000-6-2
Product certifications		UL: File E97729, CCN NKPZ CSA: File 240515, Class 3211-03
Rated supply voltage	V	24 V $\overline{\text{---}}$
Voltage limits		4–20 mA: 8–33 V $\overline{\text{---}}$ 0–10 V: 16.2–33 V $\overline{\text{---}}$
Current consumption		4–20 mA: < 20 mA 0–10 V: < 6 mA
Output signal		4–20 mA, 0–10 V
Protective treatment		Standard version "TC"
Ambient air temperature	For operation	°C (°F) 0 to + 80 (32 to 176)
	For storage	°C (°F) –25 to + 85 (13 to 185)
Fluids or products controlled		Air, fresh water (0 to + 80 °C / 32 to 176 °F)
Component materials in contact with fluid		Steel, type AISI 303 (stainless steel) nitrile (NBR)
Operating position		All positions
Vibration resistance		20 gn (9–2000 Hz) conforming to IEC 60068-2-6
Shock resistance		25 gn (half sine wave 11 ms) conforming to IEC 60068-2-27
Resistance to electromagnetic interference	Electrostatic discharges	Standard EN 61000-4-2, 8 kV in air, 6 kV on contact
	Radiated electromagnetic fields	Standard EN 61000-4-3, >10 V/m, 80–1000 MHz
	Fast transients	Standard EN 61000-4-4, 2 kV
	Surges	Standard EN 61000-4-5, 500 V 12 Ω , 1 kV 42 Ω
	Conducted disturbances, induced by radio frequency fields	Standard EN 61000-4-6, 10 V 0.15–80 MHz
Magnetic fields		Standard EN 61000-4-8, 30 A/m, 50 Hz
Electrical protection		Protected against reverse polarity and load short-circuit. For use on Class 2 circuit.
Rated impulse withstand voltage	kV	0.5
Degree of protection		IP 65 conforming to IEC/EN 60529, NEMA 4
Output response time	ms	< 2
Repeat accuracy		$\pm 0.3\%$ of the measuring range
Precision (resolution)		Combined sum of linearity, hysteresis, and repeat accuracy $\leq \pm 0.5\%$ of the measuring range Setting tolerance of zero point and measuring range limit $< \pm 1\%$ of the measuring range
Drift	Of the zero point	$< \pm 0.04\%$ of the measuring range/°K
	Of the sensitivity	$< \pm 0.03\%$ of the measuring range/°K
Service life	Operating cycles	> 10 million (varies based on application and environment)
Fluid connection		G 1/4 A (male) conforming to ISO 7, or 1/4"-18 NPT male
Electrical connection		Connector, either M12, DIN 43650A (DIN EN 175301-803-A) or Delphi (Packard) Metri-Pack

Electronic pressure sensors

Type XMLG

For control circuits

Introduction

XMLG pressure transmitters and pressure switches are characterized by their ceramic pressure measuring cell. The deformation caused by the pressure is transmitted to the resistors of a Wheatstone bridge silk-screened on the ceramic. The change in resistance is then processed by the integrated electronics for providing either a digital or analog output signal.

- 1 Electrical connection, for example: M12
- 2 Electronics with EMC protection
- 3 Ceramic measuring cell
- 4 Seals
- 5 Leakage protection
- 6 Threaded connection

Functions

Pressure transmitters have an analog 4–20 mA or 0–10 V output that is proportional to the measuring range.

Pressure and vacuum switches have a solid-state NPN or PNP normally closed (NC) output.

An anti-leakage system integrated in products for pressures ≥ 40 bar prevents fluid leakage in the event of the measuring cell destructive pressure being exceeded.

These compact products that offer excellent EMC characteristics are particularly suited to difficult industrial environments.

Important ordering requirement

XMLG pressure and vacuum switches are factory set; the upper and lower switching thresholds must be specified when ordering.

Bulk packs are mainly intended for machine manufacturers.

Interpretation of the Catalog Number—XMLG

XMLG	100	D	2	3	TQ	
Units without display, 22.8 mm diameter	Rated pressure		Electrical connection	Output	Fluid connection	Bulk pack
Code	psi	bar				
M01	-14.5 to 0	-1 to 0	D: M12	2: Analog, 4–20 mA	1: G 1/4 A (BSP male)	
001	0 to 14.5	0 to 1	Q: Integrated quick connect	3: Solid state, NPN	3: 1/4" NPT male	
006	0 to 87	0 to 6		4: Solid state, PNP	6: 1/4" NPTF female	
010	0 to 145	0 to 10		7: Analog, 0–10 V (bulk packs only)	7: 7/16-20 UNF male	
016	0 to 232	0 to 16				
025	0 to 362.5	0 to 25				
100	0 to 1450	0 to 100				
250	0 to 3625	0 to 250				
400	0 to 5800	0 to 400				

NOTE: Use this table only to interpret the catalog number. Some combinations are not available.

Environmental specifications		
Conformity to standards		CE IEC/EN 60947-1, IEC/EN 60947-5-1 EN 50081-1, EN 50082-2, EN 61000-6-2
Product certifications		UL, CSA
Rated supply voltage	Transmitters 4–20 mA	12/24 V \cdots
	Pressure/vacuum switches	
	Transmitters 0–10 V	24 V \cdots
Voltage limits	Transmitters 4–20 mA	8–33 V \cdots
	Pressure/vacuum switches	
	Transmitters 0–10 V	11.4–33 V \cdots
Current consumption	Pressure/vacuum switches	< 4 mA
	Transmitters	< 20 mA
Protective treatment		Standard version "TC"
Ambient air temperature	For operation	–15 to +85 °C (5 to 185 °F)
	For storage	–40 to +85 °C (–40 to 185 °F)
Fluids or products controlled		Hydraulic oils, air, fresh water, sea water, corrosive fluids from –15 to +125 °C (5 to 257 °F)
Component materials in contact with fluid		Ceramic Al ₂ O ₃ , stainless steel type AISI 303, Viton® FPM, PPS (Leakage protection for P > 40 bar)
Operating position		All positions
Vibration resistance		20 gn (9–2000 Hz) conforming to IEC 60068-2-6
Shock resistance		25 gn (half sine wave 11 ms) conforming to IEC 60068-2-27
Resistance to electromagnetic interference	Electrostatic discharges	Standard EN 61000-4-2, 15 kV in air, 8 kV on contact
	Radiated electromagnetic fields	Standard EN 61000-4-3, 200 V/m, 80–1000 MHz
	Fast transients	Standard EN 61000-4-4, 4 kV
	Surges	Standard EN 61000-4-5, 500 V 12 Ω , 1 kV 42 Ω . Surges > 30–50 ms may damage the device.
	Conducted disturbances, induced by radio frequency fields	Standard EN 61000-4-6, 30 V 0.15–80 MHz
	Magnetic fields	Standard EN 61000-4-8, 30 A/m, 50 Hz
Electrical protection		Protected against reverse polarity and load short-circuit
Rated impulse withstand voltage		0.5 kV
Degree of protection		IP66, IP67 conforming to IEC/EN 60529, NEMA 4
Output response time		< 2 ms
Repeat accuracy		\pm 0.1% of the measuring range
Precision	Transmitters	Combined sum of linearity, hysteresis, and repeat accuracy \pm < 0.3% of the measuring range
		Setting tolerance of zero point and measuring range limit \pm < 0.3% of the measuring range
Drift	Pressure/vacuum switches	Setting accuracy \pm < 1% of the measuring range
	Zero point	\pm < 0.015% of the measuring range/°C
	Sensitivity	\pm < 0.015% of the measuring range/°C
Service life	In millions of operating cycles	> 10
Fluid connection		1/4" NPT male conforming to ISO 7
Electrical connection		M12 connector or Phoenix Contact QUICKON type integrated connection.

Electronic pressure sensors

XMLF pressure sensors

For control circuits

Introduction

XMLF electronic pressure sensors are used for pressure control of hydraulic oils, fresh water, sea water, air, and corrosive fluids, between –1 and 600 bar (–14.5 and 8700 psi).

Simplifying setup

XMLF electronic pressure sensors are characterized by their ceramic pressure measuring cell.

- 1 Large 4-digit display indicating the programming codes, parameter values, or measured pressure.
- 2 LED indicating the selected unit of measurement (bar or psi).
- 3 LED indicating the status of the pressure switch output(s).
- 4 Ergonomic keys for configuring the product via the pull-down menu.
- 5 Excellent resistance to overpressure.
- 6 Memorization and ability to display the pressure peaks within the installation.

Three menus enable the user to do the following:

- configure (PROG menu) the various functions of the unit (access to all the parameters of the product)
- perform (USER menu) diagnostic operations and, for pressure switches, to set the switching point pressure values
- read (READ menu) all the configuration details, together with the values set in the PROG and USER menus

Functions

Pressure transmitters **XMLF●●●D2●1●** have a 4–20 mA or 0–10 V analog output. In addition to having a manual diagnostic function (see below), they also incorporate a remote diagnostic function: a digital input connected to a PLC, for example, enables remote activation of the sensor's test function. When the sensor is operating correctly, the analog output must, when testing, be close to 50% of the sensor size (12 mA or 5 V).

Universal sensors **XMLF●●●D2●2●** are pressure switches with an adjustable differential, for regulation between 2 thresholds, featuring a solid-state output (configurable for NPN or PNP, and for NO or NC), and a 4–20 mA or 0–10 V analog output. They incorporate the manual diagnostic function (see below).

Pressure switches **XMLF●●●D2●3●** are dual stage switches, with adjustable differential for each threshold, featuring 2 solid-state outputs (configurable for NPN or PNP, and for NO or NC). They incorporate the manual diagnostic function (see below).

Pressure switches **XMLF●●●E2●4●** for AC control are switches with adjustable differential, for regulation between 2 thresholds, featuring a 2.5 A, AC relay output (configurable for NO or NC). They incorporate the manual diagnostic function (see below).

XMLF sensors feature:

Various configurable functions

For the display:

- pressure unit of measurement (bar or psi),
- response time (slow: display refreshes in increments of 1% of the unit size; normal: display refreshes in increments of 0.5% of the unit size; or fast: display refreshes every 10 ms).

For the analog output:

- response time (adjustable from 5 to 500 ms, in increments of 1 ms),
- maximum pressure of the output curve (adjustable from 75 to 125% of the unit size).

For each solid-state output:

- PNP or NPN logic,
- NO or NC output,
- time delay on trip and on reset (adjustable from 0 to 50 s, in increments of 1 s),
- response time (adjustable from 5 to 500 ms, in increments of 1 ms).

For the AC relay output models:

- NO or NC contact,
- time delay on trip and on reset (adjustable from 0 to 50 s, in increments of 1 s),
- response time (adjustable from 5 to 500 ms, in increments of 1 ms).

Manual diagnostic function enabling:

- checking the correct operation of sensor
- reading the value of the maximum pressure peak that has occurred since the last reset to zero, as well as deleting this value for a fresh reset.

Features of XMLF pressure sensors

XMLF pressure sensors (see page 34) feature numerous possibilities for configuring the display (response time, choice of bar or psi units), the analog output signal operation (maximum signal output adjustable between 75% and 125% of the unit size), the solid-state output operation (PNP or NPN, NO or NC, time delay on opening or on closing, response time), and the status signaling (see below). A diagnostic function enables verification at any time of the sensor's correct operation (see below), and also provides information regarding pressure peak values.

Self-test function (calibration shunt)

XMLF pressure sensors incorporate a diagnostic function that can be used at any time to check the correct operation of the unit. An internal system enables automatic monitoring of the sensor circuits, including the ceramic pressure measuring load cell.

For all models, this function is manually activated and the result of the test is indicated on the display (DONE or ERR).

For pressure transmitters, this function can also be remotely activated via a digital input connected to a PLC, which enables automatic verification without operator intervention. In this case, the self-test also generates an analog output signal equivalent to 50% of the sensor's size (12 mA or 5 V), which in turn can be verified by the PLC.

The unit should be replaced if the difference between the signal transmitted and the standard theoretical value is too great.

Operational status signaling

XMLF pressure and vacuum switches feature status LED indicators for the digital outputs. Indication can be configured for two modes:

- **Hysteresis mode:** the indicator illuminates when the output is activated (output off for NC configuration or output on for NO configuration).
- **Window mode:** the indicator illuminates when the measured pressure is between the high and low setpoint values.

Selection of switch size

Size is selected according to the maximum pressure of the system to be controlled.

Adherence to pressure

Select a size where the nominal pressure is higher than the maximum pressure of the controlled system.

Precision, repeat accuracy

The precision and repeat accuracy are expressed as a percentage of the measuring range. Better detection is achieved when the sensor size is close to that of the maximum pressure of the controlled system. As general rule, avoid working toward the bottom limit of the measuring range.

Minimum differential of a pressure or vacuum switch

The minimum differential for each switch size is a percentage of its operating range: 2% for XMLE, and 3% for XMLF.

Selection example for a pressure switch

Maximum pressure of the system = 11 bar

High Setpoint (PH)= 7 bar

Low Setpoint (PB)= 6 bar

2 alternatives:

XML●010●●●●● (10 bar) or

XML●025●●●●● (25 bar)

Advantages:

XML●010●●●●●: maximum repeat accuracy and precision

XML●025●●●●●: withstand of overpressure.

Environmental specifications		
Conformity to standards		CE, IEC/EN 60947-1, IEC/EN 60947-5-1, EN 50081, EN 50082, EN 61000-6-2, EN 61000-4-2/3/4/5/6/8/11
Product certifications		UL, CSA
Protective treatment		Standard version "TC"
Ambient air temperature	For operation	DC models: -25 to +80 °C (-13 to 176 °F) AC models: -25 to +75 °C (-13 to 167 °F)
Fluids or products controlled		Hydraulic oils, air, fresh water, sea water, corrosive fluids from -15 to +80 °C (5 to 176 °F)
Component materials in contact with fluid		Stainless steel fluid entry type AISI 303, Viton [®] gasket Ceramic pressure measuring cell
Operating position		All positions
Vibration resistance		5 gn (25–200 Hz) and 35 gn (60–2000 Hz), conforming to IEC 68-2-6
Shock resistance		50 gn, conforming to IEC 68-2-27
Electrical protection		Protected against reverse polarity, short-circuit, overload, and miswiring
Resistance to electromagnetic interference	Electrostatic discharges	Standard EN 61000-4-2 contact 4kV, air 8 kV
	Radiated electromagnetic fields	Standard EN 61000-4-3 10 V/m
	Fast transients	Standard EN 61000-4-4 2 kV
	Surges	Standard EN 61000-4-5 (AC) 1 kV, (DC) 0.5 kV
	Conducted disturbances, induced by radio frequency fields	Standard EN 61000-4-6 10 V
Degree of protection		IP67 conforming to IEC/EN 60529, NEMA 4/6/12/13
Operating rate		< 50 Hz
Output response time		Adjustable from 5 to 500 ms, in increments of 1 ms
Service life	In millions of operating cycles	> 10
Drift	Of the zero point	< ± 0.1% of the measuring range/°C
	Of the sensitivity	< ± 0.03% of the measuring range/°C
Precision	Analog output	≤ 0.6% of the measuring range, output offset < 200 mV
	Digital output	≤ 0.6% of the measuring range
Repeat accuracy		≤ 0.5% of the measuring range
Display response time		Adjustable; 3 options: - slow (1% of the unit size), - normal (0.5% of the unit size), or - fast (refreshed every 10 ms)
Fluid connection		G 1/4 A (BSP female) conforming to NF E 03-004 and ISO 7, 1/4" NPT, or SAE 7/16-20UNF female, depending on the model
Electrical connection		M12 connector or SAE 7/8-16UN connector, depending on the model

Introduction

XMLE pressure switches and pressure transmitters are characterized by their ceramic pressure measuring cell.

- 1 Threaded fluid entry.
- 2 Sealing gaskets.
- 3 Measuring load cell (ceramic technology).
- 4 Electronic card.
- 5 Electrical connector.
- 6 Adjustment potentiometer for switching point PH (rising pressure).
Only applicable to pressure switches.
- 7 Adjustment potentiometer for switching point PB (falling pressure).
Only applicable to pressure switches.

Operating principle

Pressure switches XMLE incorporate a solid-state NPN or PNP NC output. Two potentiometers enable the setting of the PH (rising pressure) and PB (falling pressure) switching points.

Pressure transmitters XMLE provide a 4–20 mA analog output which is proportional to the measuring range.

A digital display unit can be plugged in directly between the male and female DIN 43650A connectors.

Simple, unrestricted positioning of the display unit + sensor + connector is possible (can be rotated through 360°).

The display can be adjusted to enable reading from any direction (360° orientation both vertically and horizontally).

Specifications	
Conformity to standards	CE, EN 50081, EN 50082
Product certifications	UL, CSA
Protective treatment	Standard version "TC"
Ambient air temperature	For operation: -15 to +80 °C (5 to 176 °F)
Fluids or products controlled	Hydraulic oils, air, fresh water, sea water, corrosive fluids from -15 to +80 °C (5 to 176 °F)
Component materials in contact with fluid	Stainless steel fluid entry type AISI 303, Viton® gasket Ceramic pressure measuring cell
Operating position	All positions
Vibration resistance	5 gn (25–200 Hz) and 35 gn (60–2000 Hz)
Shock resistance	50 gn
Electrical protection	Protected against reverse polarity, short-circuit, and overload
Degree of protection	IP65 conforming to IEC/EN 60529
Operating rate	50 Hz
Response time	< 5 ms
Service life	> 10 million operating cycles
Drift	Zero point: < ± 0.03% of the measuring range/°C Sensitivity: < ± 15% of the measuring range/°C
Precision	< ± 0.3% of the measuring range
Fluid connection	1/4" NPT (male) conforming to NF E 03-004, ISO 7
Electrical connection	DIN 43650A or M12 connector

Interpretation of the Catalog Number—XMLE
