# Limit switches

XC range

**Variable composition:** simplicity through innovation

## Principle

### Variable composition principle

■ The Miniature design XCMD and XCMV, and Compact design XCKD, XCKP and XCKT ranges benefit from the variable composition concept.

■ A worldwide detection first for improving productivity.

A complete offer for resolving the most commonly encountered detection problems:

- product selection simplified,
- product availability simplified,
- installation and setting-up simplified,
- maintenance simplified.

### Heads

■ A single metal operating head type for the Miniature design XCMD and XCMV, and Compact design XCKD, XCKP and XCKT ranges.

■ Interchanging of heads achieved by simple operation of forked metal latch.

■ Adjustable in 3 planes:

*All the heads can be adjusted in 15° steps throughout 360°, in relation to the body.*

*All the levers can be adjusted in 15° steps throughout 360°, in relation to the horizontal axis of the head.*

Variable composition: simplicity through innovation

## Principle (continued)

### Cable entries

- The cable entries for Compact design XCKD and XCKP switches enable:
  - simple cabling due to unrestricted access to contacts,

- simple adaptation to the various worldwide markets:
  - 6 models are available:

- ISO M16 x 1.5
- Pg 11

- ISO M20 x 1.5
- Pg 13.5
- 1/2" NPT
- PF 1/2 (G 1/2)

Each model is available in metal or plastic, respectively suited to Compact design XCKD and XCKP.

### Connection components

- The miniature XCMD range allows interchanging of these pre-cabled connection components:
  - a 1/4 of a turn is all that is required for removing the connection component on XCMD bodies with 2 and 3 contacts,
  - 6 alternative cable lengths are available as standard.

- The miniature XCMD range also includes an integral or remote connector solution.

### Contact block or bodies with contact

- 2 and 3 snap action and slow break contact blocks, with positive opening operation, are interchangeable between the Compact design XCKD and XCKP and Classic XCKJ, XCKS, XCKM and XCKL ranges.

- For the miniature design XCMD range, the contacts are an integral part of the body:
  - 2 and 3 snap action and slow break contacts, with positive opening operation, and interchangeable connection component,
  - 4 snap action contacts, with positive opening operation, with monolithic body and connection components.

#### Presentation

#### Electromechanical detection

Limit switches are used in all automated installations and also in a wide variety of applications, due to the numerous advantages inherent to their technology. They transmit data to the logic processing system regarding:

- presence/absence,
- passing,
- positioning,
- end of travel.

#### Simplicity of installation, advantages

##### ■ From an electrical viewpoint

- galvanic separation of circuits,
- models suitable for low power switching combined with good electrical durability,
- very good short-circuit withstand in coordination with appropriate fuses,
- total immunity to electromagnetic interference,
- high rated operational voltage.

##### ■ From a mechanical viewpoint

- NC contacts with positive opening operation,
- high resistance to the different ambient conditions encountered in industry (standard tests and specific tests under laboratory conditions),
- high repeat accuracy, up to 0.01 mm on the tripping points.

#### Detection movements

- Linear movement (plunger)
- Rotary movement (lever)
- Multi-directional movement

#### Terminology

<b>Rated value of a quantity</b>	<ul style="list-style-type: none"> <li>■ This replaces the term “nominal value”.</li> <li>■ It is the fixed value for a specific function.</li> </ul>
<b>Utilisation categories:</b>	<ul style="list-style-type: none"> <li>■ AC-15 replaces AC-11: control of an electromagnet on AC, test 10 Ie/Ie.</li> <li>■ AC-12: control of a resistive load on AC or static load isolated by opto-coupler.</li> <li>■ DC-13 replaces DC-11: control of an electromagnet on DC, test Ie/Ie.</li> </ul>
<b>Positive opening travel</b>	<ul style="list-style-type: none"> <li>■ Minimum travel from the initial movement of contact actuator to the position required to accomplish positive opening operation.</li> </ul>
<b>Positive opening force</b>	<ul style="list-style-type: none"> <li>■ The force required on the contact actuator to accomplish positive opening operation.</li> </ul>
<b>Switching capacity</b>	<ul style="list-style-type: none"> <li>■ I<sub>th</sub> is no longer a rated value but a conventional current used for heating tests.</li> </ul> <p><b>Example:</b> for category A300 the corresponding operational current, I<sub>e</sub> maximum, is 6 A-120 V or 3 A-240 V, the equivalent I<sub>th</sub> being 10 A.</p>
<b>Positive opening operation</b>	<ul style="list-style-type: none"> <li>■ A limit switch complies to this specification when all the closed contact elements of the switch can be changed, with certainty, to the open position (no flexible link between the moving contacts and the operator of the switch, to which an actuating force is applied).</li> <li>■ All limit switches incorporating either a slow break contact block or a snap action NC + NO (form Zb), NC + NO + NO, NC + NC + NO, NC + NC + NO + NO contact block are positive opening operation, in complete conformity with standard IEC 60947-5-1 Appendix K.</li> </ul>

### Contact blocks

#### Snap action contacts

- Snap action contacts are characterised by different tripping and reset points (differential travel).
- The displacement speed of the moving contacts is not related to the speed of the operator.
- This feature ensures satisfactory electrical performance in applications involving low speed actuators.

Unactuated state    Approach travel    Contact change of state    Positive opening

#### Slow break contacts

- Slow break contacts are characterised by identical tripping and resetting points.
  - The displacement speed of the moving contacts is equal, or proportional, to the speed of the operator (which must not be less than 0.1 m/s = 6 m/minute).
- The opening distance is also dependent on the distance travelled by the operator.

#### Electrical durability for normal loads

- Normally, for inductive loads, the current value is less than 0.1 A (sealed), i.e. values of 3 to 40 VA sealed and 30 to 1000 VA inrush, depending on the voltage.

For this type of application the electrical durability will exceed 10 million operating cycles.

**Application example:** XCKJ161 + LC1D12●●● (7 VA sealed, 70 VA inrush).

Electrical durability = 10 million operating cycles.

#### Switching capacity

- 1 Normal industrial PLC input type 1 (PLC: industrial programmable logic controllers)
- 2 Normal industrial PLC input type 2

3 Switching capacity conforming to IEC 60947-5-5, utilisation category AC-15, DC-13

A300	240 V	3 A	B300	240 V	1.5 A
------	-------	-----	------	-------	-------

Q300	250 V	0.27 A	R300	250 V	0.13 A
------	-------	--------	------	-------	--------

4 Switching capacity conforming to IEC 60947-5-1, utilisation category AC-15, DC-13

A300	120 V	6 A	B300	120 V	3 A
------	-------	-----	------	-------	-----

Q300	125 V	0.55 A	R300	125 V	0.27 A
------	-------	--------	------	-------	--------

#### Electrical durability for small loads

- The use of limit switches with programmable controllers is becoming more common.
- With small loads, limit switches offer the following levels of reliability:
  - failure rate of less than 1 for 100 million operating cycles using snap action contacts (contacts XE2SP),
  - failure rate of less than 1 for 20 million operating cycles using slow break contacts (contacts XE●NP and XE3SP).
  - failure rate of less than 1 for 5 million operating cycles using contacts XCMD.

Range of use	
<b>Standard contacts</b>	XE2SP2151, P3151 XE2NP●●●●
<b>Continuous service (frequent switching)</b>	Contacts of XCMD XE3●P●●●●
<b>Gold flashed contacts on resistive load</b>	Occasional service Infrequent switching, ≤ 1 operating cycle/ day, and/or corrosive atmosphere

(1) Usable up to 48 V/10 mA.

### Reminder of the standards

The majority of Telemecanique Sensors products comply to national standards (for example French NF C standards, German DIN standards), European standards (for example CENELEC) or international standards (for example IEC). These standards rigidly stipulate the characteristic requirements of the designated products (for example IEC 60947 relating to low voltage switchgear and control gear). These products, when correctly used, enable the production of control equipment assemblies, machine control equipment or installations conforming to their own specific standards (for example IEC 60204 for the electrical equipment of industrial machines).

#### IEC 60947-5-1

##### Insulation coordination (and dielectric strength)

- The standard IEC 60664 defines 4 categories of prospective transient overvoltages. It is important for the user to select control circuit components which are able to withstand these overvoltages. To these ends, the manufacturer states the rated impulse withstand voltage (U imp) applicable to the product.

##### Terminal connections

- The cabling capacity, mechanical robustness and durability of the terminals, as well as the ability to resist loosening, are verified by standardised tests.
- Terminal reference marking conforms to standard IEC 60947-5-1 Appendix M.

##### Switching capacity

- With maximum electrical load. A single designation (A300 for example) enables indication of the contact block characteristics related to its utilisation category.

##### Positive opening operation (IEC 60947-5-1 Appendix K)

- For contacts used in safety applications (end of travel, emergency stop device, etc.) the assurance of positive opening is required (see IEC 60204, EN 60204) after each test, the opening of the contact being verified by testing with an impulse voltage (2500 V).

##### Electrical symbols for contacts

- Form Za, the 2 contacts (NO + NC) are the same polarity.

- Form Zb, the 2 contacts (NO + NC) are electrically separate.

##### Symbol for positive opening

- Simplified version

- Complete symbol

### CENELEC EN 50047

The European standards organisation CENELEC, which has 14 member countries, has defined in this standard the first type of limit switch.

It defines 4 variants of devices (forms A, B, C, E).  
Limit switches XCKP, XCKD and XCKT conform to standard EN 50047.

- (1) Minimum value
- (2) Maximum value

- A: reference axis
- H: differential travel
- P: tripping point
- E: cable entry

## References of complete switches with 1 Pg 13.5 cable entry (3)

For complete switches with entry for Pg 13.5 cable gland, delete **H29** from the end of the reference.  
Example: **XCKJ1161H29** becomes **XCKJ1161**.

## References of complete switches with 1 entry for 1/2" NPT conduit (3)

For complete switches with entry for 1/2" NPT (USAS B2-1) conduit, replace **H29** at the end of the reference by **H7**.  
Example: **XCKJ1161H29** becomes **XCKJ1161H7**.

## Characteristics
