

What's new in PowerLogic PM5100 & PM5300 series meters (v02.1x & v02.2x)

All PowerLogic™ PM5100 & PM5300 series meters (excluding PM5350) with firmware version 02.1x (PM5110, PM5310, PM5330, PM5320, and PM5340) & version 02.2x (PM5111, PM5331, and PM5341) offer the following updates and new features:

Enhanced internal memory

The internal memory is enhanced and the hardware version is revised to B1. This information is displayed in the Meter labels.

NOTE: Meters with firmware version 1.xx do not support upgrade to firmware version 2.xx.

BACnet and DPWS support addition (applicable only to PM5320, PM5340, and PM5341 meters)

The meter supports specific BACnet components and standard objects.

The BACnet protocol allows you to:

- set out-of-service property of an object to true
- write a value to out-of-service property for testing

The meter supports DPWS (Devices Profile for Web Services). DPWS allows self-discovery of the meter while connected to local area network.
