## Automatic Switches

Automatic molded case switches open instantaneously at a factory preset magnetic trip point, calibrated to protect only the molded case switch itself, when it is subjected to high fault currents. The trip point is nonadjustable and provides no overload or low level fault protection.

Molded case switches open when the handle is switched to the OFF position or in response to an auxiliary tripping device such as a shunt trip.

All molded case switches will accept the same lugs and accessories as equivalent thermal-magnetic circuit breakers, with the exception of $Q$-frame switches which do not have electrical accessories available.

Automatic molded case switches are UL Listed per UL 489 and are CSA Certified.

## Mag-Gard Motor Circuit Protector

Instantaneous trip magnetic only circuit breakers have a single adjustment which simultaneously sets the magnetic trip level of each individual pole. Mag-Gard circuit breakers comply with $\mathrm{NEC}^{\circledR}$ requirements for providing motor circuit protection when installed as part of a UL Listed combination controller having motor overload protection Interrupting ratings are established for these UL Recognized Components only when they are used in combination with motor starters with properly sized overload relays and contactors.
Mag-Gard circuit breakers will accept the same lugs and accessories as equivalent thermal-magnetic circuit breakers.

LAL3640031M
Motor Circuit Protector

LAL3640036M Motor Circuit Protector

LA/LH Motor Circuit Protectors
Mag-Gard TM Motor Circuit Protectors (MCP) are instantaneous-trip magnetic-only circuit breakers. They have a single adjustment which simultaneously sets the magnetic trip level of each individual pole. Mag-Gard ${ }^{\text {TM }}$ circuit breakers comply with NEC requirements for providing motor circuit protection when installed as part of a UL Listed combination controller having motor overload protection. Interrupting ratings are established for these UL Recognized Components only when they are used in combination with motor starters with properly sized overload relays and contactors.

LA/LH-Frame Mag-Gard ${ }^{\text {TM }}$ Motor Circuit Protectors (MCP):

- 400 A rating at up to 600 Vac
- Instananeous-trip magnetic-only circuit breakers available in unit mount and I-Line 3pole constructions
- Accept the same lugs and accessories as equivalent LA/LH-Frame circuit breakers
- Available in unit mount and I-Line construction[3]
- High-interruption (LHL) are also available

Complies with NEC requirements for providing motor circuit protection when installed as part of a UL Listed combination controller having motor overload protection.

## I-Line ${ }^{T M}$ Special Terminal Connectors <br> Bolt-On I-Line Circuit Breakers

NOTE: Bolt-on I-Line connectors are not available on Powerpact ${ }^{\text {TM }}$ circuit breakers.
The standard I-Line circuit breaker is designed to provide a high quality, secure connection between the distribution bus and circuit breaker. I-Line circuit breakers use plug-on type line-side connectors. The parallel line-side connectors "clamp" around the bus bars. In case of a short circuit, the increased magnetic flux causes the connectors to grasp the bus bars even tighter. I-Line circuit breakers with bolted connections have clamp-on jaws that are bolted around the main bus, as shown. The bolt-on I-Line design is offered as an alternative in order to meet specifications requiring a bolted connection. Bolt-on I-Line construction is available on FY, QB, QD, QG, QJ, Q4, LA, and LH frame circuit breakers and molded case switches, and SL225 and SL400 sub-feed lugs.
To order on all products except QB, QD, QG and QJ, simply add the letter "B" in the catalog number prefix of the circuit breaker, e.g., LA36100 becomes LAB36100. For QB, QD, QG and QJ, insert the letter "E" in the third position, e.g., QBE, QDE, etc.

## Top-Feed I-Line Circuit Breakers

I-Line panelboards may require the use of a top-feed I-Line circuit breaker in applications where a top-feed main circuit breaker is required. This involves having the I-Line jaw connectors on the OFF end of the circuit breaker, as opposed to the standard location on the ON end of the circuit breaker. To designate this construction, simply place the suffix "MT" at the end of the circuit breaker catalog number, e.g., FA36100 becomes
FA36100MT. On LA or LH top-feed I-Line circuit breakers, accessories must be factory installed. This option is available in PowerPact ${ }^{\text {TM }} \mathrm{H}$ and J -frame by placing a " K " in the 4th position (termination indicator) of the circuit breaker catalog number, e.g., HGA36125 becomes HGK36125. This option is not available on 600 A LA or LH circuit breakers, or Powerpact M -, P - and R -frame circuit breakers.
"CBA" I-Line Jaw Configuration (Non-PowerPact Circuit Breaker)
Standard 1-and 2-pole I-Line circuit breakers are ordered by designating the required phase connection letters as a suffix to the circuit breaker catalog number. 3-pole circuit breakers do not require this phase designation and are supplied with an "ABC" phase jaw configuration as standard. In most applications this is acceptable since the phase loading is evenly distributed. In applications where the phases must be reversed it is possible to order a "CBA" jaw configuration by simply placing the letters "CBA" at the end of the standard catalog number, e.g., LA36100 becomes LA36100CBA.

## Control Wire Tap Lugs

Control wire tap lugs are used in applications requiring connection to a small wire (22-14 AWG) for control circuits. This is accomplished by crimping the wire to a standard wire crimp terminal (not included) and fastening the terminal to the circuit breaker lug. On LA lugs, the lug is drilled to accept a 6-32 screw (included) to secure the crimp connector. On FA lugs, a flat slip-on crimp connector is used to attach to a shim-like connector placed under the circuit breaker lug.
Note: To order as a factory-installed device on Q4, LA, or LH circuit breakers, add suffix number 8041 to circuit breaker catalog number, e.g., LAL364008041. To order as a factory-installed device on MG, MJ, PG, PJ, PL RG, RJ and RL use the product selector or the respective PowerPact catalog. Tapped lugs will be installed on the "ON" and "OFF" ends of the circuit breaker.

Table 3.24: Control Wire Terminations for Circuit Breakers

| Circuit Breaker | Cat. No. | Standard Package Qty. |
| :---: | :---: | :---: |

| RG, RJ, RL | 1200 A | AL1200P25TK4 | 4 |

## Special Magnetic or Thermal Calibration Magnetic

The magnetic trip ranges for standard circuit breakers are listed in the Square D Digest. Requirements outside this range are best accommodated by selecting another standard circuit breaker. In some cases where this is not practical, a circuit breaker may be ordered with special magnetic calibration. Special magnetic calibration is not possible in all cases. Circuit breakers with special magnetic calibration and an adjustable magnetic trip range are not UL Listed; those with a fixed magnetic trip setting are UL Listed. Consult Schneider Electric local sales office for more information.

## 50 Degrees C

UL 489 Listed molded case circuit breakers are calibrated for $40^{\circ} \mathrm{C}$ ambient temperature. To meet requirements of higher ambient conditions, circuit breakers can be factory calibrated for a $50^{\circ} \mathrm{C}$ ambient temperature. Circuit breakers with special thermal
 to H or J thermal magnetic circuit breaker. Consult local sales office for more information.

## Rear-Connected Studs

Rear-connected studs are designed to allow rear termination in applications such as control panels where wire gutter space may be limited. The studs may be bolted directly to the bus or lugs may be attached to the studs.
NOTE: Long and short studs must be alternated on adjacent poles to assure proper electrical clearance.
Table 3.26: Rear-Connected Studs-Not UL Listed

| Circuit <br> Breaker <br> Cat. No. <br> Prefix | Ampere <br> Ratings | Stud Cat. No. | Overall <br> Length | To Back of <br> Circuit <br> Breaker | Diameter | Threads/lnch |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| LAL, LHL | $125-400 \mathrm{~A}$ | LAS114 | $12-3 / 16 \mathrm{in}$. | $11-1 / 2 \mathrm{in}$. | $3 / 4 \mathrm{in}$. | 16 |

NOTE: Use alternate size studs on adjacent poles to obtain proper electrical clearance.

## Visi-Blade ${ }^{\text {TM }}$ Circuit Breakers

Visi-blade construction is a modification to the cover of a thermal-magnetic circuit breaker, a molded case switch, or a Mag-Gard ${ }^{\text {TM }}$ circuit breaker which provides a "window" through which the position of the movable contacts can be verified.
Luminescent paint is applied to the movable contact arms to clearly indicate their position. Gases produced during high level interruption may cause clouding of the Visiblade window. Visi-Blade construction is not available on circuit breakers not included in table below.

Add suffix letter "V" to the circuit breaker catalog number, i.e., LAL36400V.
Table 3.27: Available Visi-Blade Circuit Breakers

## Moisture and Fungus Resistant Treatment for Circuit Breakers

This treatment covers the application of moisture and fungus resistant varnish to circuit breakers and molded case switches.

- The varnish meets Military Specification MIL-V-173C VARNISH, MOISTURE AND FUNGUS RESISTANT.
- The treatment meets military Specification MIL-T-152E TREATMENT, MOISTURE AND FUNGUS-RESISTANT, OF COMMUNICATIONS, ELECTRONIC, AND ASSOCIATED ELECTRICAL EQUIPMENT.
The treatment of circuit breakers in accordance with said specifications is intended to protect them against the moisture and fungus condition encountered in service by retarding the absorption of moisture and inhibiting the growth of fungi.
To order for L-frame circuit breakers, place the suffix "FT" at the end of the circuit breaker catalog number, e.g., LAL36100 becomes LAL36100FT. To order for QB, QD, and QG circuit breakers, place the suffix "YF" at the end of the circuit breaker catalog number, e. g., QDL32150 becomes QDL32150YF. ED, EG, EF, PowerPact™ B-, D-, H-, J-, L, M-, Pand R -frame circuit breakers are inherently fungus resistant and need no further treatment.

## Short Handle for LA/LH Circuit Breakers

Certain applications of the LA/LH circuit breakers (as mains in particular panelboards) require the use of a slightly shorter operating handle. For ordering information refer to the chart below.

Table 3.28: Catalog Numbers for Short Handle LA/LH CIrcuit Breakers

| Lug Configuration Desired |  | Catalog <br> OPrefix Indication" | Catalog <br> "Suffix Indication" | Circuit Breaker <br> Cat. No. |
| :---: | :---: | :---: | :---: | :---: |
| ON End | OFF End |  | "MB" | LAL36400MB |
| Lugs | Lugs | "P" | "MB" | LAP36400MB |
| No Lugs | Lugs | "P" | "MT" | LAP36400MT |
| Lugs | No Lugs | "F" | "MB" | LAF36400MB |
| No Lugs | No Lugs |  |  |  |

## Lug Deletion

In some applications, the circuit breaker does not require lugs on one or both ends. To meet this requirement, the circuit breaker should be ordered with the desired lug configuration as indicated below. If necessary, lugs may be removed in the field. However, if lugs are removed in the field, circuit breaker Types Q4, LA and LH must be secured with pan-mounting screws, or have "P" screws (cover screws and nuts) installed securing the base to the cover.

Table 3.29: Lug Configuration [2]

| ON End | OFF End | Circuit Breaker Prefix - Suffix |
| :---: | :---: | :---: |
| Lugs | Lugs | (e.g., LAL36100) |
| No Lugs | No Lugs | (e.g., LAF36100) |
| No Lugs | Lugs | (e.g., LAP36100) |
| Lugs | No Lugs | "P MT" [3] |

## Termination Insert Kits

The standard lugs supplied with EDB, EGB, EJB, and FJA circuit breakers and molded case switches are secured by means of a screw fastened through the circuit breaker terminal into the lug body. If the standard lug is removed and a bolted connection to the circuit breaker terminal pad is desired, a threaded insert kit is required. The insert is installed below the terminal pad. For ordering information see chart below.

Table 3.30: Termination Kit Inserts

| Kit Cat. No. | Inserts Per Kit | Circuit Breakers |
| :---: | :---: | :---: |
| TIKFD | 3 | EDB, EGB, EJB, FJA |

## Electric Joint Compound

I-Line ${ }^{\text {TM }}$ circuit breakers, I-Line busway plug-on units, I-Line panelboards and switchboards, QMB plug-on switches and motor control center plug-on units are supplied with factory applied joint compound on the plug-on connectors. The compound should not be removed because it contributes to the overall performance of the connection. Whenever one of these units is removed and reinstalled, the joint compound should be reapplied. Catalog number PJC 7201 is a two-ounce container of compound specially formulated for the I-Line, QMB and motor control center connections.
No other type of commercially available joint compound should be used.
Table 3.31: Electric Joint Compound

| Use With | Cat. No. |
| :---: | :---: |
| I-Line Circuit Breakers, QMB Plug-On Units, or Model-V MCC Units | PJC7201 |
| SED Drawout Circuit Breakers | PJC8311 |

## Circuit Breakers for Grounded B-Phase (BØ) (Corner-Grounded Delta) Systems

- For use on 480 V systems, LH type circuit breakers must be ordered as 600 V versions and with a 5861 suffiix (i.e. LHL361005861).
- For use on 240 V systems, circuit breakers may be ordered as 480 V versions with a 5861 suffix (i.e. LHL341005861).
- LA type circuit breakers are not available with grounded $B$ phase markings.
- Two-pole 240 V grounded B-phase circuit breakers (except EDB, EGB, EJB, QB, QD, QG, QJ, BD, BG, and BJ) will be built using three-pole modules.
- Two-pole grounded B $\varnothing$ circuit breakers will be labeled with 240 Vac interrupting ratings.
- No self-certification is available for interrupting ratings greater than shown in the tables below.
Table 3.32: Application Data for 240 Vac $3 \varnothing$ Corner-Grounded Delta System

| Cat. No. Prefix | Poles | UL Listed Interrupting Rating |  |
| :--- | :---: | :---: | :---: |
|  |  | Ampere Rating | $\mathbf{2 4 0}$ Vac Interrupting Rating |
| QO-H, QOB-H | 2 | $15-100 \mathrm{~A}$ | 5 kA |
| QB, QD, QG, QJ | $2[4]$ | $70-250 \mathrm{~A}$ | 10 kA |
| EDB, EGB, EJB | $2[4]$ | $15-125 \mathrm{~A}$ | $18 \mathrm{kA}, 35 \mathrm{kA}, 65 \mathrm{kA}$ |
| BD, BG, BJ | $2[4]$ | $15-125 \mathrm{~A}$ | $18 \mathrm{kA}, 35 \mathrm{kA}, 65 \mathrm{kA}$ |
| HD, HG | $2[4]$ | $15-150 \mathrm{~A}$ | 42 kA |
| HJ, HL | $2[5]$ | $15-150 \mathrm{~A}$ | $65 \mathrm{kA}, 100 \mathrm{kA}$ |
| JD, JG, JJ, JL | $2[5]$ | $150-250 \mathrm{~A}$ | $42 \mathrm{kA}, 65 \mathrm{kA}, 100 \mathrm{kA}$ |
| LH, LHL | $2[5]$ | $125-400 \mathrm{~A}$ | 30 kA |

| RG, RK Electronic Trip Unit | $2[5][6]$ | $1200-2500 \mathrm{~A}$ | $35 \mathrm{kA}, 65 \mathrm{kA}$ |
| RJ Electronic Trip Unit | $2[5][6]$ | $1200-2500 \mathrm{~A}$ | 100 kA |
| RL Electronic Trip Unit | $2[5][6]$ | $1200-2500 \mathrm{~A}$ | 100 kA |

Table 3.33: 480 Vac $3 \varnothing$ Corner-Grounded Delta System $[7]$
3-Phase Corner-Grounded Delta System using 3-Pole Circuit Breaker

NOTE: Three-pole circuit breakers may be used on three-phase corner-grounded delta systems. The outside poles are to be connected to the ungrounded phase and the grounded conductor connected to the center pole. Connecting the circuit breaker in a manner other than that described or shown may result in an unsafe application of the circuit breaker.

| Cat. No. Prefix | Poles [8] | UL Listed Interrupting Rating [8] |  |

[^3]

## UL Marine Listed/CSA Certified Circuit Breakers (UL 489 Supplement SA)

PowerPact $H$ and $J$ circuit breakers with thermal magnetic trip units meet the UL 489 SA requirements on vessels of any length under or over 65 ft . ( 19.8 m ). PowerPact $\mathrm{H}, \mathrm{J}$, and L circuit breakers with Micrologic trip units meet the
UL 489 Supplement SA requirements for use on vessels over 65 ft . ( 19.8 m ) in length. Marine circuit breakers must not use aluminum or aluminum alloys for terminal connections and must be calibrated at an ambient temperature of $104^{\circ} \mathrm{F}\left(40^{\circ} \mathrm{C}\right)$.
Standard circuit breakers should not be specified or used in place of marine rated circuit breakers.

Circuit breakers can be ordered with the Marine SA listing by adding the suffix "YA" (marine) to the catalog number.

Table 3.34: Circuit Breakers for Marine Applications

| Cat. No. Prefix | Poles | Ampere <br> Rating | Application | Cat. No. |
| :--- | :---: | :---: | :---: | :---: |

## UL Naval Listed/CSA Certified Circuit Breakers (UL 489 Supplement SB)

PowerPact H, J, and L circuit breakers with Micrologic trip units meet the UL 489 Supplement SB requirements for naval vessels. These circuit breakers are subject to various vibration testing as described in UL 489 Supplement SB. Naval circuit breakers must not use aluminum or aluminum alloys for terminal connections and are calibrated at an ambient temperature of $122^{\circ} \mathrm{F}\left(50^{\circ} \mathrm{C}\right)$. Standard circuit breakers should not be specified or used in the place of naval rated circuit breakers.
Circuit breakers can be ordered with the Naval SB listing by adding the suffix "YA1" (naval) to the catalog number.

Table 3.35: Circuit Breakers for Navel Applications

| Cat. No. Prefix | Poles | Ampere <br> Rating | Application | Cat. No. |
| :--- | :---: | :---: | :---: | :---: |
| HD, HG, HJ, HL [11] | 2,3 | $15-150 \mathrm{~A}$ |  | For use on non-combat and <br> auxiliary navalships of any <br> length. |
| JD, JG, JJ, JL [11] | 2,3 | $150-250 \mathrm{~A}$ | Add suffix "YA1" after the <br> standard circuit breaker catalog <br> number. <br> Example: |  |

## Factory-Installed LA and Q-Frame Electrical Accessories

Electrical accessories are available on all molded case circuit breakers except QOM1 circuit breakers.

- Combination accessories may be ordered by description, i.e., 1021 and 1212.
- All AC electrical accessories shown below are rated for $50 / 60 \mathrm{~Hz}$.
- See page 3-14 for field-installable accessories. See Digest Section 7 for PowerPact ${ }^{T M}$ circuit breaker accessories.
Table 3.36: Factory-Installed Accessories for Thermal-Magnetic LA and Q-Frame Circuit Breakers

| Accessory | Description |  | Rated Voltage | Coil Burden | Suffix |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Shunt Trip | Trips the circuit breaker from a remote location by means of a trip coil energized from a separate circuit. A 120 V shunt trip will operate at $55 \%$ or more of rated voltage. All other shunt trips will operate at $75 \%$ or more of rated voltage. <br> Application <br> - For use with momentary or maintained push button <br> - Sure Trip Capacitor Unit requires 48 Vdc shunt trip <br> - Leads: (2) Black. 18 AWG Cu |  | 24 Vac | 21 VA | -1042 |
|  |  |  | 120 Vac | 24 VA | -1021 |
|  |  |  | 208 Vac | 107 VA | -1021 |
|  |  |  | 240 Vac | 154 VA | -1021 |
|  |  |  | 277 Vac | 14 VA | -1037 |
|  |  |  | 480 Vac | 45 VA | -1037 |
|  |  |  | 24 Vdc | 36 VA | -1027 |
|  |  |  | 48 Vdc | 36 VA | -1028 |
|  |  |  | 125 Vdc | 44 VA | -1029 |
|  |  |  | 250 Vdc | 15 VA | -1030 |
| GroundFault Shunt Trip | Trips the circuit breaker electrically using the signal from a Micrologic ${ }^{\text {TM }}$ Ground-Fault Module. <br> Application <br> - For use only with obsolete GP Ground-Censor ${ }^{\text {TM }}$ system or add on ground-fault module <br> - Leads: (2) Orange 18 AWG Cu |  | - - | - - | -G |
| Undervoltage Trip (UVR) | Trips the circuit breaker electrically when a control circuit falls below 35 to $70 \%$ of nominal (not field adjustable). Picks up at $35-85 \%$ of nominal voltage. <br> Application <br> - UVR must be energized in order to close the circuit breaker <br> - Leads: (2) Brown 18 AWG Cu leads |  | 24 Vac <br> 120 Vac <br> 240 Vac <br> 24 Vdc 48 Vdc | 5 VA 88 VA 8 VA 2 3 VA VA | $\begin{aligned} & -1143 \\ & -1121 \\ & -1124 \\ & -1127 \\ & -1128 \end{aligned}$ |
|  | Monitors circuit breaker contact status and provides a remote signal indicating the circuit breaker contacts are OPEN or CLOSED. <br> Application <br> - Max. Load=10 A @ 125-250 Vac, $1 / 4 \mathrm{hp}$ @ 125-250 Vac, 5 A @ 30 Vdc <br> - Leads: Yellow for "A", Blue for "B", Striped for common 18 AWG Cu | 1A/1B |  |  | -1212 |
|  |  | 2A/2B |  |  | -1352 |
| Auxiliary Switches |  | 3A/3B | See load info. in App. text at left | See load App. text at left | -1364 |
| Alarm Switches | Used with control circuits and actuated only when the circuit breaker has tripped. Standard construction includes a normallyopen contact. <br> Application <br> - Max. Table 3.38: Accessory Mounting Locations

LA, LH, Q4 Series 4 circuit breakers or newer = Field-installable accessories Both accessory ports will accept shunt trips, UVRs and auxiliary switches. Alarm switches are factory installable only (right pole). Maximum of one device per port.

Walking Beam Mechanical Interlock Requires 2 circuit breakers with WB suffix, 1 walking beam assembly and 1 mounting pan

## Electrical Operators

Provides remote ON, OFF/RESET control of molded case circuit breakers.

- A complete line of field-installable electrical operators.
- Installing side mounted motor operators on non I-Line ${ }^{\text {TM }}$ circuit breakers requires the use of a separate mounting pan.
- Side mounted electrical operators require an additional 4-1/2 in. (114 mm) of mounting space in I-Line installations.
When remote indication of circuit breaker status is required, order circuit breaker with 1A-1B auxilliary switch for ON-OFF Indication and alarm switch for TRIP Indication. Electrical operators require SPDT maintained contact switch. Refer to Class 9001 control unit listing for operators and pilot lights.
NOTE: Not available on Mag-Gard ${ }^{\text {TM }}$ circuit breakers and molded case switches.
Table 3.39: Electrical Operators

| Circuit Breaker Prefix | Top Mount |  | Side Mount |  |  | Mounting Pan Cat. No. |

|  | $250-500 \mathrm{kcmil} \mathrm{Cu}$ | 2.3 | 1 | CVC400LA5 | 1 |

## Power Distribution Connectors (PDC) for Circuit Breakers-for Field Replacement of Mechanical Lugs

Can be used for multiple load connections on one circuit breaker. Use in place of standard distribution blocks to save space and time.

Field-installable kits, including tin-plated aluminum connectors and all necessary mounting hardware are available for Square D LA and Q4-frame molded case circuit breakers.
Connectors are UL Listed:

- For use on load end of circuit breaker only
- For use in UL508 Industrial Control applications only
- For use in UL 1995/CSA C22.2 No. 236 heating and cooling equipment
- For copper wire only

Table 3.45: Power Distribution Connectors for LAL, LHL, and Q4L Circuit Breakers

| LHE-R | A03 | 44.00 | 1118 | 15.38 | 391 | 7.88 | 200 |
| LHE-S | E03 | 44.50 | 1130 | 15.38 | 391 | 6.50 | 165 |

## Lock-On Provisions

Lock-off provisions are standard on all NEMA Type 4, 4X, 5 stainless steel and NEMA Type 12, 12K circuit breaker enclosures. Provision for one inch hasp padlock is available factory installed. This modification will allow the circuit breaker to be locked in the ON position. When locked in the ON position, the external operator will not indicate if circuit breaker is tripped. UL Listed.

Table 3.50: Enclosure

| Enclosure Prefix | Suffix for Lock-On Provision |
| :---: | :---: |
| FA, J, LA, L, M, P | SPLO |

## Pilot Light—Selector Switch—Push Button

Pilot lights, push buttons or selector switches are available factory installed in the cover of NEMA Type $4,4 \mathrm{X}, 5$ stainless steel or NEMA Type 12, 12K circuit breaker enclosures. Wiring to contact blocks is not available. Customer must furnish catalog number of device desired. Price $=$ circuit breaker + enclosure + neutral + ground + pilot light, push button and/or selector switch + factory-installed adder. Order by description. L600 enclosures are UL Listed, other enclosures are not UL Listed.

## Phenolic Legend Plate

Available engraved and mounted on most circuit breaker enclosures. Legend engraved in $1 / 4$-inch high white letters on black background. Customer must provide legend. UL Listed. Not available on NEMA Type 7 or 9 enclosures.
To order, add suffix NP to standard catalog number (i.e. LA400SNP).

Figure 1

Figure 2

Figure 3

## Key Interlock Systems for Circuit Breaker Enclosures

 (Factory installed only.)Interlocks are used to prevent the authorized operator from making an unauthorized operation. Available only on NEMA 4, 4X, 5, 12K, and 12/3R circuit breaker enclosures.
The key interlock system is a simple and easy method of applying individual key interlock units and assemblies to the above equipment so as to require operation in a predetermined sequence. UL Listed.

## Quoting

Contact local Field Sales office for catalog number, availability and pricing prior to quoting a job.

## Ordering

Order cannot be released for production until the following information has been provided:

- End User-Company name, address
- Function of each lock (e.g., circuit breaker to be locked open with key removed, key held when circuit breaker is closed)
- Existing Equipment-if circuit breaker is to be interlocked with equipment already on site, provide brand of existing lock and key number
- Other New Equipment-if circuit breaker is to be interlocked with new equipment not yet installed at the site, then provide contact person and phone number so that locks may be coordinated
- Additional information may be required upon order entry

## Diagram Symbols

$\qquad$ Device normally open
Device normally closed
Direction of key transfer
Key interchange number
Key

## Sample Application-1 (See Figure 1)

To prevent two devices from being closed simultaneously.
Two devices are shown in Figure 1. In operation they are not closed at the same time With the interlocks arranged as shown only one key is required in the interlocking system. Both devices are shown open, therefore, the key is free. To close any one device the key is inserted and turned in that particular lock, the key is held in this lock until the device is again locked open. This simple interlocking sequence lends itself to a multitude of applications. The procedure is the same for two devices, neither of which is to be opened at the same time.

## Sample Application-2 (See Figure 2)

To prevent opening of switch $A$ when circuit breaker $B$ is closed.
Switch $A$ and circuit breaker $B$ are in closed position. Key $A-1$ is held in circuit breaker $B$ interlock.

- Open circuit breaker.
- Turn key A-1 in L-O-R interlock on circuit breaker B to lock open. Key A-1 is now free.
- Insert key A-1 in L-C-R interlock on switch A and turn to unlock.
- Open switch A. Key A-1 is now held. Reverse sequence to restore service.

## Sample Application-3 (See Figure 3)

To prevent operation of switch A when circuit breaker B is closed. Permits reclosing of circuit breaker for servicing when switch is locked open.
Switch A and circuit breaker B are in closed position. Key A-1 is held in circuit breaker interlock.

- Open circuit breaker.
- Turn key A-1 in L-O-R interlock on circuit breaker B to lock open. Key A-1 is now free.
- Insert key A-1 in L-O-C-R interlock on switch A and turn to unlock.
- Open switch A.
- Turn key A-1 in L-O-C-R interlock on switch A to lock open. Key A-1 is now free.
- Return key A-1 to circuit breaker interlock and unlock for operation during servicing period.

Reverse sequence to restore service.

## Sample Application-4 (Main-Tie-Main) (See Figure 4)

To prevent paralleling of lines A and B.-Two loads, fed from either source.
Circuit breaker $A$ is closed to supply load $M$. Circuit breaker $B$ is closed to supply load $N$. Tie-circuit breaker C is open. Keys A-1 are held in interlocks on both circuit breakers A and B . Tie-circuit breaker C cannot be closed unless either A or B is locked open.
To transfer load $N$ to circuit breaker $A$, proceed as follows:

- Open circuit breaker B.
- Turn key A-1 in L-O-R interlock on circuit breaker B to lock open. Key A-1 is now free.
- Insert Key A-1 in L-O-R interlock on tie-circuit breaker C and turn to unlock. Key $\mathrm{A}-1$ is now held.
- Close tie-circuit breaker C.

Reverse sequence to restore service.
Load $M$ can be supplied through circuit breaker $B$ in a similar manner.

[^0]:    [5] Circuit breakers will be labeled with Line and Load markings and are not suitable for reverse connections.
    Available on 3P circuit breakers; not available on I-Line ${ }^{T M}$ constructions. For $100 \%$ rated circuit breakers replace the "T" suffix with an "R" suffix. 100\% rated is not available in I-Line, plug-in, or drawout constructions.
    [6] Circuit breakers with J, L, and R interrupting ratings are UL Certified as current limiting.
    [7] For smaller wire (4-4/0 AWG AI or Cu ), replace the lug wire binding screws with longer binding screws provided.
    [8] See Digest Section 7 for lug and termination kits.
    [9] Add TS suffix for circuit breaker without terminal nut kit.

[^1]:    Accessories see Circuit Breaker Accessories, page 3-12 through page 3-16
    Optional Lugs see page 3-16
    Dimensions see page 3-17

[^2]:    [1] Withstand rating of 10 kA at 240 Vac .
    [1] Hold and Trip indicate fixed magnetic trip levels
    [2] Low and High refer to adjustable mag level setting.

[^3]:    [4] Standard labeling includes grounded B phase.
    [5] Built using 3P module.
    [6] Electronic $=$ ET1.0 Electronic Trip System
    Micrologic $=3.0,5.0,3.0 \mathrm{~A}, 5.0 \mathrm{~A}, 6.0 \mathrm{~A}, 5.0 \mathrm{P}, 6.0 \mathrm{P}, 5.0 \mathrm{H}$ and 6.0 H Micrologic Trip System.
    [7] Refer to NEC 240.85 for application guidance.
    [8] The grounded phase must be connected through the center pole only.

[^4]:    4] Unless otherwise specified, wire sizes apply to both aluminum and copper conductors.
    [5] Use suffix 8002 for factory-installed Cu lugs.
    [6] See instruction bulletins for recommended tools.
    [7] Not for use with I-Line circuit breakers.
    [8] When using fine stranded wire, increased cross sectional area may cause maximum wire size to be reduced.
