XCS range

Catalogue

Simply easy!™

Appropriate safety

Ingenious and innovative, Schneider Electric safety solutions offer maximum protection with the Telemecanique XCS Sensors range of dedicated safety switches for controlling the safe opening and interlocking of guards and covers in your installations.

> A complete range for all applications:

- For a wide range of machinery guards, covers and doors
- For all types of environment
- A solution tailored to the levels of safety required

> A Schneider Electric package offer:

- The Telemecanique XCS Sensors range is designed to be integrated into Schneider Electric safety solutions
- Present in over 190 countries and 5000 sales outlets, Schneider Electric makes its offer available worldwide through its network of distributors

Contents

Selection guide.....	p 6 to 13
General presentation	p 14 to 23
XCSM miniature safety limit switches	p 24 to 27
XCSP and XCSD compact safety limit switches	p 28 to 33
XCSP, XCSPR and XCSTR lever or spindle-operated safety switches	p 34 to 37
XCSA, XCSB, XCSC, XCSMP, XCSPA, XCSTA slim safety switches.....	p 38 to 51
XCSLE and XCSLF slim safety interlock switches.....	p 52 to 67
XCSE and XCSTE rectangular safety interlock switches	p 68 to 83
XCSR contactless RFID safety switches	p 80 to 87
XCSDMC, XCSDMP and XCSDMR coded magnetic safety switches	p 96 to 105
XPS safety control units	p 106 to 109

> Appropriate solutions

The latest operating safety standards propose new risk management methods right from the design stage, making use of concepts such as Safety Integrity Levels (SIL) and Performance Levels (PL).
Schneider Electric safety solutions enable you to optimize the cost of your installations according to the level of safety required, while maximizing interoperability.

3 pre-defined safety levels

PL=d (category 3) / SIL 2

Architecture 2

Several XCSLF in series + XPSUAF + 2 LC1D + 1 XB4 start + XPSVNE (for zero speed detection)
For more than one XCSLF connected in series, the safety level can even be reduced to PLc (see fault masking restrictions in ISO/TR 24119)

Used with Schneider Electric safety relays, safety controllers or safety PLCs and TeSys motor starter solutions, XCS safety switches offer levels of access protection up to PLe, category 4, SIL3, according to standards requirements in force EN ISO 13849-1 and EN/IEC 62061.

PL=b (category 1) / SIL 1

Architecture 1

1 XCSPA + 1 LC1D + 2 XB4 (start and stop)

Architecture 3

Several XCSDM in series with 1 XPSUAF + ABL8 + CAD32 (or LC1D)
For more than one XCSDM connected in series, the safety level can even be reduced to PLc (see fault masking restrictions in ISO/TR 24119)

PL=e (category 4) / SIL 3

Architecture 5

Several XCSDMP + XPSUS (or XPSUDN) + ABL8 + 2 CAD32 (or LC1D)

Architecture 6

XCSRC●1●M12 + ABL8RPS24● + 2LC1D

Architecture 4

1 XCSRC●0M12 + 1 XCSA + 1 XCSLF + 1 XCSM + XPSMCM + 2 LC1D

Architecture 7

Several XCSRC●2M12 + ABL8 + 2 LC1D

- 1 XCSRC●2M12: XCSR daisy-chain RFID safety switch
- 2 XCSRZE: Loopback device
- 3 XCSRD210MDB: Diagnostic module
- 4 XPSUAF: Safety relay
- 5 KM1: Contactor 1 - OSSD1
- 6 KM2: Contactor 2 - OSSD2
- 7 HMISTU655: Magelis Small Panel with touch screen (USB cable for PC connection: XBTZG935 + XBTZ925 adapter)
- 8 VW3A8306R●●: 2xRJ45 Modbus cable
- 9 ABL8RPS24●

> XCS safety switches guide your choice

Whatever your activity sector, your type of machine or your automated function, Telemecanique Sensors offers you a complete range of safety switches to meet your protection requirements for functional safety.

Adaptable to your environment

Actuation mode		Mechanical: 5 different actuator heads	Lever or hinge-operated	Mechanical using separate key actuators	Mechanical and interlock by separate key manual unlocking	Mechanical and interlocking using separate key, Solenoid locking/unlocking	Contact-free	
Non-defeatability	According to ISO 14119	Actuator protected against manual operation	Mechanical direct connection	Without solenoid		With solenoid	Using RFID unique code High level of coding	Using coded magnetic key Low level of coding
				Using special specific key				
Product type and preferred machine architecture by safety level (PL/SIL)	PL=b (category 1) / SIL1	Architecture 1					–	–
	PL=d (category 3) / SIL2	Architecture 2						Architecture 3
	PL=e (category 4) / SIL3	Architecture 4					Architecture 4, 6 or 7	Architecture 5
Normal environment		XOSP: Plastic body, 3 contacts secured mounting adjustment and cabling access using special screws (XCSM and XCSD also) 	XCSPL: Stainless steel lever, up to 3 contacts 	XCSPR - XCSTR: Stainless steel spindle operator, for direct axis control, up to 3 contacts 	XCSPA, XCSTA: Compact plastic body, up to 3 contacts  XCSMP: Miniature key switch with cable output, up to 3 contacts 	–	XCSLE: Reinforced plastic body, F _{2N} = 1100N slim dimensions, up to 6 contacts for inertia machines XCSTE: Plastic body, rectangular shape, 3 contacts F _{2N} =500N, for small machines with inertia 	–
Harsh environment		XCSM: Metal miniature, up to 4 contacts XCSD: Metal compact, 3 contacts for covers and gates 	–	–	XCSA: Metal body, 3 contacts for protection against accidental impact for controlling heavy doors 	XCSB XCSC: Metal body, 3 contacts, release using pushbutton or key 	XCSLF: Slim dimensions, metal body, F _{2N} =2300 N. Up to 6 contacts, reinforced locking for inertia machines in harsh environments XCSE: Metal body, rectangular shape, 5 contacts, F _{2N} =2000N, for inertia machines 	XCSR: Thermo-plastic body, 3 versions (standalone, daisy-chain or single models for point-to-point connection) Suitable for low inertia machines with doors, covers or guards with imprecise alignment. Ideal for dust and liquid environments which may be exposed to impact and vibrations.  XCSDMP - XCSDMC compact, XCSDMR cylindrical, Various formats, ideal for dusty environments. Suitable for low inertia machines with doors, covers or guards with imprecise alignment 
Safety controllers & relay modules		XPSUAF, XPSUAK, XPSUDN, XPSUAT, XPSUS, XPSMCM (1) (2)					–	Not necessary for standalone models. XPSUAF, XPSUAK, XPSUAT, XPSUDN, XPSUS, XPSMCM (1)(2) for daisy-chain or single models. XPSUAK, XPSUDN, XPSUAT, XPSUS, XPSMCM (1)(2)

(1) In combination with an appropriate and correctly connected safety control unit. Refer to the relevant safety standards and product features to determine the maximum safety level achievable for the application.
(2) Complete references and other XPS safety control units are available on www.schneider-electric.com

100

Refer to standards EN/ISO 12100 and EN/ISO 14119 IEC/ISO 13852 and EN/IEC 60204-1

Telemecanique Sensors XCS safety detection solutions conform to EN/ISO 12100 and EN/ISO 14119 standards regarding potentially hazardous machine functions. They meet more specifically the following requirements:

- Removable or movable protective guards must be used in conjunction with locking or interlocking devices,
- For high inertia machines (i.e. with long rundown time), an interlocking device must be used. With a long rundown time, the rundown time is greater than the time it takes for a person to reach the hazardous zone. The interlocking device helps ensure that the guard remains locked until the potentially hazardous movement has stopped.

Safety interlock switches

As required by EN/ISO 12100 and EN/ISO 14119, safety interlock switches which are specifically designed for machine guarding applications provide an ideal solution for the locking or interlocking of movable guards associated with industrial machinery. They also meet the requirements of IEC/ISO 13852 and EN/IEC 60204-1.

They contribute to the protection of operators working on potentially hazardous machines by breaking the start control circuit of the machine when a protective guard is opened or removed, using **positive opening operation contacts**, thus stopping the hazardous movement of the machine.

Removal/opening of the guard (after the hazardous movement has stopped) can either be:

- at the time the machine is switched off for low inertia machines (machines where the rundown time is less than the time it takes for the operator to access the hazardous zone), or
- delayed for high inertia machines (machines where the rundown time is greater than the time it takes for the operator to access the hazardous zone).

Control circuit categories

If used with a Schneider Electric safety control unit, the safety interlock switch enables designers to achieve PL=e, category 4 control systems with reference to EN/ISO 13849-1 and SIL CL3 with conformity to EN/IEC 62061. When used on their own or combined with another switch, they can achieve up to category 1, 2 or 3 control circuits (except for RFID XCSR standalone models which can reach PLe-Cat. 4/SIL3 without safety control unit).

Safety related parts of control systems shall be developed taking into account the results of an appropriate Risk Assessment.

Safety of personnel

The start command for the machine can only be initiated following correct operation of the safety interlock switch.

On its release, the NC safety contacts are opened by **positive action** or, for coded magnetic switches, change state (**this should be monitored using a Schneider Electric safety control unit**). RFID XCSR safety switches have 2 OSSDs (Output Signal Switching Devices) which are NC when the guard is closed.

Safety of operation

The safety interlock switches incorporate slow break or snap action contacts with **positive opening operation** (except for coded magnetic switches where this is not possible). For mechanical safety interlock switches, on closing of the guard the actuating key fitted to it enters the head of the switch, operates the multiple interlock device and closes the NC contacts. For coded magnetic switches, the presence of the magnet causes the contacts to change state. For RFID XCSR safety switches, the 2 OSSDs change from ON to OFF state when the guard is being opened.

Safety in use

In order to compensate for mechanical clearance, vibration, etc., all safety interlock switches are designed to accept a few millimeters of misalignment between the actuating key and the switch, or between the magnet and the sensor part for coded magnetic switches, or between the transponder and the reader for RFID XCSR safety switches.

Design to minimize defeat

Mechanically, magnetically or RFID-actuated safety interlock switches are designed to be operated by specific actuating keys so that they cannot be defeated in a simple manner using common tools (rods, metal plates, simple magnets, etc.). When loosening the fixing screws for re-orientation of the turret head on safety interlock switches, the head itself remains attached to the switch body and the contact states remain unchanged.

All safety interlock switches and safety limit switches are designed to avoid any adjustments in the head setting, removal of the actuating key or access to the safety contacts without using the appropriate tool.

There are various methods for obtaining a higher level of tamperproofing, for example:

- using a cage device to help prevent the insertion of a spare actuating key or magnet, or any other foreign body
- fixing the actuating key or coded magnet to the guard by means that make it very difficult to remove (riveting or welding)
- using RFID unique coding XCSR safety switches

Metal key-operated safety switches - Without solenoid

Without locking of actuating key

XCSA without manual unlocking

Metal case key-operated switches for use on machines **with low inertia** and operating in **normal conditions** (no vibration or shock and guard mounted vertically, without risk of rebound on closing), thus helping to eliminate unintentional opening of the guard.

With locking of actuating key and manual unlocking

XCSB with pushbutton

XCSC with actuating key

Metal case key-operated switches for use on heavy machines **with low inertia** and operating in **arduous conditions** (shock or vibration), whereby the guard could open unintentionally. A key-operated lock or a pushbutton enables positive locking of the guard and its subsequent unlocking.

Metal safety interlock switches - With solenoid

With interlocking of actuating key by solenoid

XCSLF slim (metal case)

Metal case safety interlock switches for use on machines **with high inertia** with controlled opening of the protective guard.

Locking of the moving guard can either be on de-energization or energization of the solenoid.

Auxiliary release: A key-operated lock enables manual unlocking of the guard from outside the safeguarded area in the event of an interlocking circuit malfunction, and also provides extra safety for maintenance personnel likely to be working on the machine. The switches incorporate 2 LEDs: one indicating guard "open" and the other, guard "closed and locked" (XCSLF/XCSE).

Emergency release with mushroom head pushbutton

XCSLF with mushroom button

Safety interlock switches are available with a mushroom head pushbutton mounted on the rear of the switch for unlocking the machine guard from inside the safeguarded area.

This manual unlocking using the mushroom head pushbutton for emergency release is useful in the following cases:

- while the machine or a group of machines is undergoing maintenance, enabling operation at reduced speed
- while stopped with the guard(s) closed

The safety of maintenance personnel is thus improved in the event of:

- a power outage
- an interlocking circuit malfunction
- personnel finding themselves in a hazardous situation

Unlocking using the emergency release mushroom head pushbutton takes priority over any other action. It therefore enables a person to leave the zone if the need arises. This function is reinitialized by turning (with or without a key) the emergency release mushroom head.

Plastic key-operated safety switches - Without solenoid

Without locking of actuating key - Without solenoid

XCSMP

XCSPA

XCSTA

Plastic case safety interlock switches for use on light machines **with low inertia** and operating in **normal conditions**.

For use in arduous conditions (shock or vibration, guard not vertical or risk of rebound on closing) where the guard could open unintentionally, a **guard retaining device (XCSPA or XCSTA)** is available as an accessory.

Plastic safety interlock switches - With solenoid

With interlocking of actuating key by solenoid

XCSLE slim (plastic case)

Plastic case safety interlock switches for use on machines **with high inertia** with controlled opening of the protective guard.

Locking of the moving guard can either be on de-energization or energization of the solenoid.

Auxiliary release: A special tool enables manual unlocking of the guard from outside the safeguarded area in the event of an interlocking circuit malfunction, and also provides extra safety for maintenance personnel likely to be working on the machine.

The switches incorporate 2 LEDs: one indicating guard "open" and the other, guard "closed and locked" (XCSLE).

Safety detection solutions

Lever or spindle-operated safety switches, safety limit switches, coded magnetic switches and contactless RFID safety switches

Rotary lever and spindle-operated switches for hinged or cover guards

With head for rotary movement (lever or spindle)

XCSTR
with spindle

XCSPL
with lever

Plastic case safety interlock switches with straight or elbowed operating lever or spindle operator.
Specifically designed for small industrial machines with low inertia fitted with small **hinged doors, covers or protective guards**.
They help protect the operator by immediately stopping the hazardous movement of the machine as soon as the rotary lever or spindle displacement reaches an angle of 5°.

Safety limit switches

With head for linear movement (plunger) or rotary movement (lever)

XCSD for rotary
movement

XCSM for linear
movement

Metal or plastic case limit switches.
For use on machines with low inertia and also on machines with high inertia, when used in conjunction with key-operated safety interlock switches with solenoid for monitoring access doors and/or guards. When used on their own, they are always installed in "positive mode" or combined in pairs, with one switch being in "positive mode" and the other in "negative mode".

Coded magnetic switches

With an associated coded magnet

XCSDMC,
compact format

XCSDMP,
standard format

XCSDMR,
cylindrical format

Plastic case guard switches for use on machines with low inertia.
Specifically designed for industrial machines fitted with **doors, covers or guards with imprecise guiding**.
They are ideally suited for machines subjected to frequent washing or liquid spray. They help protect the operator by immediately stopping any hazardous movement, as soon as the distance between the switch and its magnet is greater than 8 or 5 mm, depending on the switch model.

Contactless RFID safety switches

Operated by a digital code

XCSR contactless RFID safety
switches (model for series
connection (daisy-chain))

Plastic case switch and transponder for use on machines with low inertia.
Specifically designed for industrial machines fitted with **doors, covers or guards with imprecise guiding**. They are ideally suited for **machines subjected to frequent washing or liquid spray, and exposed to shocks and vibrations**.
Contactless system composed of a microprocessor-controlled switch and a transponder.

The reader and the transponder are factory-paired so as to load into the transponder a unique code shared with the reader. This saved digital code is the unique "key" accepted by the paired reader. **This type of switch is thus difficult to tamper with.**

As long as the transponder is in the reader detection zone (<15 mm), the machine will run normally. When the transponder goes outside the field generated by the reader, the reader stops the machine, indicating that the safety guard is open.

Actuating keys

The actuating keys are common to all safety interlock switches: metal case XCSLF, XCSE, XCSA, XCSB, XCSC and plastic case XCSLE

Their oblong fixing holes enable simple adjustment when mounting on moving guards.

A pivoting actuating key (both horizontally and vertically) is available when using safety interlock switches in conjunction with hinged guards or guards with imprecise guiding.

Straight actuating keys are supplied with an adapter shank for simple replacement of legacy **XCKJ** or **XCSL5/7** safety interlock switches by an **XCSLF/LE** switch, without the need to drill additional fixing holes for the switch or the actuating key.

Turret head

All metal case safety interlock switches are fitted with a square turret head which can be rotated through 360° in 90° steps

8 directions of actuation are possible for the actuating key:

- 4 in the horizontal plane
- 4 from above the switch (4 alternative positions of the actuating key slot, depending on the orientation of the head).

When loosening the fixing screw(s) for re-orientation of the operating head, the head itself remains attached to the body and the contact states remain unchanged.

Safety (or main) contacts

Metal case safety interlock switches incorporate a **2-pole (XCSLF)** or a **3-pole (XCSLF, XCSE, XCSA, XCSB, XCSC) contact block** with NC contacts with positive opening operation, which is actuated by insertion or withdrawal of the actuating key attached to the guard.

Withdrawal of the actuating key opens the NC safety contact(s), even in the event of the contact sticking or welding.

The 3-pole contact block enables redundant safety circuits to be established (for example: NC + NC or NC + NO) and also to provide signaling (for example: PLC, illuminated beacon, etc.).

Auxiliary contacts

Safety interlocks with solenoid (XCSLF and XCSE) have 2 (XCSLF, XCSE) or 3 auxiliary contacts (XCSLF) for monitoring the solenoid position (locking monitoring) - NC contacts with positive opening operation

LED indicators

An orange LED (optional for XCSA, XCSB and XCSC key-operated switches, standard for XCSLF and XCSE safety interlock switches) **indicates the position of the machine guard:**

LED illuminated: actuating key not inserted in head of switch, NC contact(s) open, guard open.

LED not illuminated: actuating key inserted in head of switch, NC contact(s) closed, guard closed.

A green LED (incorporated on XCSLF, XCSLE, XCSE and XCSTE safety interlock switches) **indicates the locking of the machine guard:**

LED not illuminated: actuating key not inserted in head of switch. The machine cannot be operated.

LED illuminated: actuating key inserted in head of switch **and actuating key locked**. The machine is either ready for starting, running or decelerating to a standstill.

Note: LEDs should be wired in accordance with the schematics indicated in the instruction sheet or in the catalog pages.

Safety detection solutions

Metal case key-operated safety interlock switches

Manual locking/unlocking by pushbutton or key-operated lock

The pushbutton or key-operated lock fitted to XCSB and XCSC key-operated switches allows manual locking/unlocking of the machine guard

The use of pushbutton or key is not necessary for normal operation of the safety interlock switch (XCSA). For XCSB and XCSC key-operated switches, when the machine guard is locked (key in "LOCK" position), the resistance to forcible withdrawal of the actuating key fitted to the guard is $F_{zh} = 1150 \text{ N}$. The key is removable from the locking device in the "LOCK" position.

Locking/unlocking by solenoid

XCSLF and XCSE safety interlock switches incorporate a solenoid for locking/unlocking of the machine guard

With the machine guard closed and locked, the resistance to forcible withdrawal of the actuating key fitted to the guard is $F_{zh} = 2300 \text{ N}$ (XCSLF) and $F_{zh} = 2000 \text{ N}$ (XCSE) (according to EN/ISO 14119 - $F_{zh} = F_{1max}/1.3$).

In addition to the 2-pole (XCSLF) or 3-pole contacts (XCSLF and XCSE), positively operated by the actuating key fitted to the guard, XCSLF safety interlock switches incorporate **NC + NO or 2 NC or 1 NC + 2 NO or 2 NC + 1 NO or 3NC auxiliary contact blocks mechanically linked to the solenoid (NC + NO or 2 NC for XCSE)**.

The NC contact(s) are for use in the safety circuit of the machine and the NO contact for signaling the status of the solenoid.

Key-operated lock (auxiliary release)

XCSLF and XCSE safety interlock switches are fitted with a key-operated lock allowing unlocking of the machine guard from outside the safeguarded area (for use by authorized personnel only)

Manual unlocking of the guard using the key-operated lock is useful in the following cases:

- while the machine is undergoing maintenance (with the key turned to the "UNLOCK" position and then removed, the level of protection is higher for helping to prevent an accidental machine start. Safety for maintenance personnel is thus improved);
- in the event of a power outage
- in the event of an interlocking circuit malfunction (interlocked condition maintained: positive safety).

The electrical supply providing unlocking via the solenoid always takes priority over manual unlocking using the key-operated lock.

The lock fitted to standard safety interlock switches has key withdrawal from the "LOCK" and "UNLOCK" positions.

Actuating keys

The actuating keys are common to plastic XCSLE, XCSPA and XCSTA key-operated switches (except for XCSMP, see page 42)

Their oblong fixing holes enable simple adjustment when mounting on moving guards.

A pivoting actuating key (both horizontally and vertically) is available when using safety interlock switches in conjunction with hinged guards or guards with imprecise guiding.

Straight actuating keys are supplied with an adapter shank for simple replacement of a legacy **XCKP** key-operated switch by an **XCSPA** switch, or a legacy **XCKT** key-operated switch by an **XCSTA** switch, without the need to drill additional fixing holes for the switch or the actuating keys.

Turret head

XCSPA, XCSTA, XCSLE and XCSTE safety interlock switches are fitted with a square turret head which can be rotated through 360° in 90° steps. XCSMP safety interlock switches have a fixed head

8 directions of actuation are possible for the actuating key:

- 4 in the horizontal plane (1 for **XCSMP**)
 - 4 from above the switch (1 for **XCSMP**)
- (4 alternative positions of the actuating key slot, depending on the orientation of the head)

When loosening the fixing screw(s) for re-orientation of the operating head, the head itself remains attached to the body and the contact states remain unchanged.

Safety (or main) contacts

Key-operated switches incorporate either a 2-pole contact block (XCSMP, XCSPA, XCSLE and XCSTE) or a 3-pole contact block (XCSMP, XCSPA, XCSTA, XCSLE and XCSE), with NC contacts with positive opening operation, which is actuated by insertion or withdrawal of the actuating key attached to the guard

XCSLE

or XCSTE

or XCSPA

or XCSTA, XCSTA

or XCSMP

The NC contact(s) are for use in the safety circuit of the machine. Withdrawal of the actuating key opens the NC safety contact(s), even in the event of the contact sticking or welding.

The other NO contact can be used for signaling (for example: PLC, illuminated beacon, etc.).

Auxiliary contacts

Safety interlocks with solenoid (XCSLE and XCSTE) have 1 (XCSTE), 2 or 3 auxiliary contacts (XCSLE) for monitoring the solenoid position (locking monitoring) - NC contacts with positive opening operation

Guard retaining device

The XCSZ21 guard retaining device can be used with all XCSPA and XCSTA plastic case key-operated switches that are used in conjunction with either the wide (XCSZ12) or pivoting (XCSZ13) actuating key

The device maintains the guard closed by providing a retaining force of 50 N (instead of 10 N without guard retaining device).

It is especially suitable for use with light machines operating in arduous conditions (vibration, mechanical shock, guard not vertical, risk of guard rebound on closing, etc.).

It can be used for horizontal actuating key actuation directions, as well as those from above.

Locking/unlocking by solenoid

XCSLE and XCSTE safety interlock switches incorporate a solenoid for locking/unlocking of the machine guard

With the machine guard closed and locked, the resistance to forcible withdrawal of the actuating key fitted to the guard is $F_{zh} = 1100 \text{ N}$ (XCSLE) and $F_{zh} = 500 \text{ N}$ (XCSTE) (according to EN/ISO 14119 - $F_{zh} = F_{1max}/1.3$). In addition to the 2-pole (XCSLE, XCSTE) or 3-pole (XCSLE) contact block, positively operated by the actuating key fitted to the guard, the switches incorporate **1 NC (XCSTE), NC + NO or 2 NC (XCSLE) auxiliary contacts mechanically linked to the solenoid**. The NC contact(s) are for use in the safety circuit of the machine.

Unlocking by special tool (auxiliary release)

XCSLF and XCSE safety interlock switches are supplied with a special tool 1 that enables unlocking of the machine guard from outside the safeguarded area (for use by authorized personnel only)

Manual unlocking of the guard using the tool 1 is useful in the following cases:

- while the machine is undergoing maintenance (with the tool turned to the "UNLOCK" position and then removed, the level of protection is higher for helping to prevent an accidental machine start. The safety of maintenance personnel is thus improved)
- in the event of a power outage
- in the event of an interlocking circuit malfunction (interlocked condition maintained: positive safety). The electrical supply providing unlocking via the solenoid always takes priority over manual unlocking using the special tool.

Resilience

XCSLE and XCSLF safety interlock switches provide good resistance to shocks

XCSLE Head against the fixing support: max = 1.2 J
XCSLE Head protruding from the fixing support: max = 4.9 J

XCSLF Head against the fixing support: max = 9.6 J
XCSLF Head protruding from the fixing support: max = 6.4 J

Presentation

Turret head

Safety switches for hinged covers or guards, featuring a hinged lever or spindle operator, incorporate a turret head that can be rotated through 360° in 90° steps. Two additional self-locking screws are included with each switch for positive fixing of the head.

2 types of body

- Plastic case, narrow, with 1 cable entry for **XCSPL** and **XCSPR**.
- Plastic case, wide, with 2 cable entries for **XCSTR**.

2 types of operating lever, 2 spindle lengths

■ Levers

Straight or elbowed (flush with rear of switch), making the lever switches suitable for use with all types of hinged guard, whether:

- flush with the machine framework (use a switch with an elbowed flush lever)
- overhanging in relation to the machine framework (use a switch with a straight lever)

3 alternative operating lever positions allow the switches to be used with guards that open to the left, center or right.

■ Spindle operators

2 spindle lengths: 30 or 80 mm.

Safety contacts

XCSPL and **XCSPR** safety switches incorporate a 2-pole or 3-pole contact block - NC contacts with positive opening operation. The contact arrangements can be: NC + NO break before make, 2 NC, 1 NC + 2 NO break before make or 2 NC + 1 NO break before make.

XCSTR safety switches incorporate a 3-pole contact block - NC contacts with positive opening operation. The contact arrangements can be:

1 NC + 2 NO break before make, 2 NC + 1 NO break before make or 3 NC. Opening of the NC safety contact(s) occurs when the operating lever or spindle is displaced by an angle equal to or greater than 5°.

Applications

These safety switches provide a solution for monitoring **hinged protective guards** with small opening radius on machines with low inertia (quick rundown time).

They are especially suitable for existing machines which need to be brought in line with the latest standards and directives since they can be used in conjunction with existing covers, including those whose mounting is somewhat imprecise.

Mounting of the safety switch improves the machine operator's level of safety by limiting opening of the protective guard and reducing the risk of touching any moving parts before they have come to a stop.

Safety detection solutions

Coded magnetic safety interlock switches and contactless RFID safety switches

Presentation

Coded magnetic switches

3 types of case

- PBT plastic body
- Compact rectangular, **XCSDMC**
- Standard rectangular, **XCSDMP**
- Cylindrical Ø 30, **XCSDMR**
- Pre-cabled, length 2 m, 5 m or 10 m
- Connector on flying lead connection:
 - M8: DMC
 - M12: DMP, DMR

Contacts

Coded magnetic switches are fitted with 2-pole (**XCSDMC/XCSDMR/XCSDMP**) or 3-pole (**XCSDMP**) Reed type contacts and are available with or without a "guard closed" LED indicator.

The NC and NO contacts change state as soon as the magnet is at a distance from the sensor of approximately 8 mm for **XCSDMP** and **XCSDMR** switches and approximately 5 mm for **XCSDMC** switches.

Coded magnetic switches have a low level of coding according to EN/ISO 14119.

Connection

When used in safety circuits, the Reed technology contacts must always be used in conjunction with a Schneider Electric safety control unit.

Contactless RFID safety switches

3 model types

- Thermoplastic housing (Valox™)
- Standalone, with embedded EDM (external device monitoring) and start/restart function
- Series connection (daisy-chain)
- Point-to-point connection
- Connector:
 - M12 8-pin for standalone
 - 2 x M12 5-pin for daisy-chain model and M12 5-pin for point-to-point connection

Technology

Contactless RFID protocol.

Embedded EDM (external device monitoring) for standalone model (no need for safety control unit); diagnosis of the whole daisy chain of switches possible using the diagnostic module; point-to-point connection to a safety controller or safety PLC.

High level of coding (according to EN/ISO 14119)

- Reader and transponder are factory-paired with a unique code

Applications

Contactless safety switches are specifically designed for industrial machines fitted with **doors, covers or guards with imprecise guiding.**

They are ideally suited for machines subjected to frequent washing or liquid spray, and for XCSR RFID safety switches, exposed to knocks and vibrations.

Presentation

XCSM safety limit switches

With head for linear movement (plunger) or rotary movement (lever)

- **XCSM** miniature metal case
- With protective plate, helping to prevent both access to the fixing screws and adjustment of the head by unauthorized personnel
- Torx fixing screws
- A removable cable entry to facilitate wiring

Contacts

XCSM3 limit switches are fitted with 3-pole contacts (2 NC + 1 NO snap or slow break) and **XCSM4** switches are fitted with 4-pole contacts (2 NC + 2 NO snap) - NC contacts with positive opening operation.

4 versions of complete switches are available incorporating these contacts:

- metal end plunger
- roller plunger
- thermoplastic roller lever
- 19 mm diameter steel roller lever

Connection

Pre-cabled switches, either 7 x 0.5 mm² (3-pole contacts) or 9 x 0.34 mm² (4-pole contacts).

XCSD and XCSP safety limit switches

With head for linear movement (plunger) or rotary movement (lever)

- **XCSD** compact metal case and **XCSP** plastic case
- With protective plate, helping to prevent both access to the fixing screws and adjustment of the head by unauthorized personnel
- Torx fixing screws
- A removable cable entry to facilitate wiring

Contacts

XCSP39 and **XCSD3** limit switches are fitted with 3-pole contacts.

2 NC + 1 NO snap action or slow break for **XCSD3**; 2 NC + 1 NO snap action for **XCSP39** (NC contacts with positive opening operation)

4 versions of complete switches are available incorporating these contacts:

- metal end plunger
- roller plunger
- thermoplastic roller lever
- 19 mm diameter steel roller lever

Applications

These switches provide a solution for monitoring covers, guards or grids. For use on machines with low inertia (quick rundown time) and also on machines with high inertia (long rundown time) when used in conjunction with key-operated safety interlock switches with solenoid.

When used on their own, they are always installed in "positive mode" or combined in pairs, with one switch being in "positive mode" and the other in "negative mode", and can, when connected to Schneider Electric safety control units, achieve a PL=e, category 4/SIL 3 system.

References of complete switches with 1 or 2 cable entries tapped no. 11 (Pg 11)

To order a complete switch with 1 or 2 Pg 11 cable entries, replace the last number in the reference (2) with 1.
Example: XCSP752 becomes **XCSP751** (some Pg 11 references may not be available).

References of complete switches with 1 or 2 cable entries for 1/2" NPT conduit

To order a complete **XCSP** or **XCSPR** switch with 1 cable entry for 1/2" NPT conduit, replace the last number in the reference (2) with 3.
Example: XCSP592 becomes **XCSP593** (some 1/2" NPT references may not be available).
For a complete **XCSTR** switch with 2 entries for 1/2" NPT conduit, use DE9RA1012 adapter.

DE9RA1012

Description	Sold in lots of 10	Unit reference	Weight kg
1/2" NPT conduit adapter	10	DE9RA1012	0.050

(1) Head adjustable in 90° steps through 360°. Switches supplied with 2 additional self-locking screws for positive fixing of the head.

(2) For switches with 80 mm spindle: replace the second number in the reference (5) with 6. Example: XCSPR552 becomes **XCSPR562**. The weight increases by 0.032 kg (some 80 mm spindle references may not be available).

Schemes

Wiring up to PL=b, category 1 conforming to EN/ISO 13849-1

Example with cable short-circuit protection fuse

Wiring up to PL=d, category 3 conforming to EN/ISO 13849-1

Example with 3-pole 1 NC + 2 NO contact with mixed redundancy of the contacts and the associated control relays

To activate K1, the lever or spindle needs to be rotated when the supply is switched on.

H1: "lever or spindle displaced from initial position" indicator. When used in conjunction with an appropriate safety control unit and another safety switch, the rotary lever or spindle-operated switch can provide locking protection to PL=d, category 3 or PL=e, category 4 conforming to EN/ISO 13849-1.

Environmental characteristics

Key-operated switch type		XCSA, XCSB, XCSC (metal)	XCSMP, XCSPA, XCSTA (plastic)
Conformity to standards	Products	EN/IEC 60947-5-1, UL 508, CSA C22-2 no. 14	
	Machine assemblies	EN/IEC 60204-1, EN/ISO 14119	
Product certifications		UL, CSA, CCC, EAC	UL, CSA, CCC, EAC (cULus, EAC for XCSMP)
Maximum safety level (1)		PL=e, category 4 conforming to EN/ISO 13849-1 and SIL CL3 conforming to EN/IEC 62061	
Reliability data B _{10D}		XCSA/PA/TA/MP: 5,000,000 XCSB/C: 3,000,000 (value given for a service life of 20 years, limited by mechanical or contact wear)	
Ambient air temperature	For operation	-25...+70 °C	
	For storage	-40...+70 °C (-25...+80 °C for XCSMP)	
Vibration resistance		5 gn (10...500 Hz) conforming to EN/IEC 60068-2-6 (6 gn (10...55 Hz) for XCSMP)	
Shock resistance		10 gn (duration 11 ms) conforming to EN/IEC 60068-2-27 (50 gn (duration 11 ms) for XCSMP)	
Electric shock protection		Class I conforming to EN/IEC 61140	Class II conforming to EN/IEC 61140
Degree of protection		IP 67 conforming to EN/IEC 60529 and EN/IEC 60947-5-1 (2)	
Cable entry		1 entry tapped ISO M20 x 1.5 (clamping capacity 7 to 13 mm) or tapped for Pg 13.5 cable gland (clamping capacity 9 to 12 mm) or for 1/2" NPT conduit	1 entry (XCSPA) or 2 entries (XCSTA) tapped for ISO M16 x 1.5 cable gland (clamping capacity 4.5 to 10 mm) or for Pg 11 cable gland, or tapped 1/2" NPT, or for 1/2" NPT conduit using metal adapter DE9RA1012) for XCSTA (other entry fitted with blanking plug).
Connecting cable		—	Pre-cabled, either 4 x 0.5 mm ² or 6 x 0.5 mm ² (XCSMP)
Materials		Zamak case	Polyamide PA66 fibreglass impregnated case
		Actuating keys (all types): steel XC60, surface treated	

(1) Using an appropriate and correctly connected safety control unit

(2) Live parts of these switches are protected to some extent against the penetration of dust and water. However, when installing take all necessary precautions to help prevent the penetration of solid bodies, or liquids with a high dust content, into the actuating key aperture. Use of blanking plugs in unused key slots can reduce the penetration of unwanted elements (XCSZ28 for XCSMP and XCSZ27 for XCSA, XCSB, XCSC). One blanking plug is delivered with the product. Not recommended for use in saline atmospheres.

Schemes Note: These schemes are given as examples only, the designer should refer to the relevant safety standards for guidance.

Wiring up to PL=b, category 1 conforming to EN/ISO 13849-1

Example with 3-pole 2 NC + 1 NO contact and protection fuse to help prevent shunting of the NC contact, due to either cable damage or tampering.

(1) Signaling contact

Wiring up to PL=d, category 3 conforming to EN/ISO 13849-1

Example with 2-pole 1 NC + 1 NO contact with mixed redundancy of the contacts and the associated control relays.

To activate K1, it is necessary to remove and re-insert the actuating key when the supply is switched on.

Wiring to PL=e, category 4 conforming to EN/ISO 13849-1 and SIL CL3 conforming to EN/IEC 62061. Wiring method used in conjunction with a safety control unit.

(The guard switch should be used in conjunction with a safety limit switch to give electrical/mechanical redundancy).

Method for machines with quick rundown time (low inertia)

Locking or interlocking device based on the principle of redundancy and self-monitoring.

The safety control units provide these functions.

Locking of actuating key and operation in positive mode associated with a safety control unit.

Safety detection solutions

Environmental characteristics			
Safety interlock switch type		XCSLF (metal)	XCSLE (plastic)
Conformity to standards	Products	EN/IEC 60947-5-1, EN/ISO 13849-1, EN/IEC 62061, UL 508, CSA C22-2 no. 14	
	Machine assemblies	EN/IEC 60204-1, EN/ISO 14119, EN/ISO 12100	
Product certifications		UL, CSA, CCC, EAC	
Maximum safety level (1)		PL=e, category 4 conforming to EN/ISO 13849-1 and SIL CL3 conforming to EN/IEC 62061	
Reliability data B ₁₀₀		5,500,000 (value given for a service life of 20 years, limited by mechanical or contact wear)	
Ambient air temperature	For operation	-25 ...+60 °C	
	For storage	-40...+70 °C	
Vibration resistance		5 gn (10...500 Hz) conforming to EN/IEC 60068-2-6	
Shock resistance		10 gn (duration 11 ms) conforming to EN/IEC 60068-2-27	
Electric shock protection	Conforming to EN/IEC 61140	Class I (cable entries)	Class II (cable entries)
		Class I (M23 connector, 19 pins)	
Degree of protection		IP 65 (XCSL.....M3, versions with M23 connector) IP 66 and IP 67 (IP 66 for XCSLF.....4... and for XCSLF.....6...) conforming to EN/IEC 60529 and EN/IEC 60947-5-1 (2)	
Connection		3 cable entries tapped M20 x 1.5 for ISO cable gland. Clamping capacity 7 to 13 mm or entries tapped for 1/2" NPT conduit or M23 19-pin connector output (18+1PE) 24 V ~ versions.	
Material		Zamak case	Polyamide case
		Actuating keys (all types): steel XC60, surface treated	

(1) Using an appropriate and correctly connected safety control unit.

(2) Live parts of these switches are protected to some extent against the penetration of dust and water. However, when installing take all necessary precautions to help prevent the penetration of solid bodies, or liquids with a high dust content, into the actuating key aperture. Use of XCSZ30 blanking plugs for unused key slots can reduce the penetration of unwanted elements (one blanking plug is delivered with the product). Not recommended for use in saline atmospheres.

Example: XCSLF3535312 becomes **XCSLF3535332**. Some 110/120V $\sim$ references may not be available.

To order a switch with a solenoid voltage of 220/240 V $\sim$, replace the sixth number in the selected reference with 4.

Example: XCSLF3535312 becomes **XCSLF3535342**. Some 220/240V $\sim$ references may not be available.

References of switches with locking on energization and unlocking on de-energization

To order a safety interlock switch with locking on energization and unlocking on de-energization of the solenoid, replace the fifth number in the selected reference with 5. For these models, the auxiliary contact states are represented with key inserted and solenoid energized.

Example: XCSLF3535312 becomes **XCSLF3535512**. Some references with locking on energization may not be available.

References of complete switches with 3 cable entries tapped for 1/2" NPT conduit

To order a switch with three 1/2" NPT cable entries, replace the last number in the reference with 3.

Example: XCSLF3535312 becomes **XCSLF3535313**. Some 1/2" NPT references may not be available.

References of actuating keys and separate parts

See page 64.

(1) Head adjustable in 90° steps through 360°. Blanking plug for operating head slot included with switch.

(2) A key-operated lock (2 keys included with switch) enables forced opening of the interlocking mechanism by authorized personnel, allowing withdrawal of the actuating key and subsequent opening of the NC safety contacts (auxiliary release).

(3) Actuating keys to be ordered separately (see page 64).

(4) Common power supply for the solenoid and the LEDs.

Other versions: consult your Customer Care Center.

Safety detection solutions

Safety interlock switches

Key-operated with solenoid, turret head (1)

XCSLF metal, connector output

Type of switch	Locking on de-energization and unlocking on energization of solenoid (2)
----------------	--

LED indication	Orange LED: "guard open" indication Green LED: "guard closed and locked" signaling		
Power supply for the solenoid and the LEDs	24 V $\overline{\text{---}}$ or $\sim$ (50/60 Hz on $\sim$)		
Type of auxiliary contact actuated by the solenoid (locking contacts). Contact states represented with actuating key inserted and solenoid not energized.	1 NC + 2 NO break before make 	2 NC + 1 NO break before make 	3 NC simultaneous

References of switches without actuating key (3) (⊖ NC contact with positive opening operation)

Types of main contact actuated by the key

Contact states represented with actuating key inserted

With 19-pin (6 contacts) M23 connector output

Connection examples

The contact states are represented with the actuating key inserted and the solenoid not energized

Note: These schemes are given as examples only, the designer should refer to the relevant safety standards for guidance.

Wiring up to PL=b, category 1 conforming to EN/ISO 13849-1

Wiring example with protection fuse to help prevent shunting of the NC contact, due to either cable damage or tampering

1 NC + 1 NO locking on de-energization and 1 NC + 1 NO auxiliary contacts

XCSLF25253... and XCSLE25253...

E1-E2: Solenoid supply

21-22: Safety contact, key position monitoring

13-14: Safety contact, key position signaling

41-42: Solenoid position monitoring contact

13-X2/E2: LED (orange): key withdrawn

41-X1/E2: LED (green): key inserted and locked

22-41 : Safety pre-wiring mandatory

S1: Manual release button

X: Unlocking signal

Wiring up to PL=d, category 3 conforming to EN/ISO 13849-1

Wiring example with redundancy for the safety interlock switch contacts, without monitoring or redundancy in the power circuit.

2 NC + 1 NO locking on de-energization and 2 NC + 1 NO auxiliary contacts

XCSLF37373... and XCSLE37373...

E1-E2: Solenoid supply

21-22 and 31-32: Redundant safety contacts, key position monitoring

41-42 and 51-52: Redundant contacts, solenoid position monitoring

13-14: Safety contact, key position signaling

13-X2/E2: LED (orange): key withdrawn

51-X1/E2: LED (green): key inserted and locked

22-41 and 32-51: Safety pre-wiring mandatory

S1: Manual release button

X: Zero speed or unlocking signal

Connection examples (continued)

The contact states are represented with the actuating key inserted and the solenoid not energized.

Wiring up to PL=e, category-4 conforming to EN/ISO 13849-1 and EN/IEC 62061 (assuming that failure of the single mechanical point can be excluded)

Wiring example with 2-LED module associated with an XPSUA• (1) safety control unit

(1) XPSUAF• /XPSUAK• /XPSUAT•

E1-E2: Solenoid supply

13-14: Safety contact, key position signaling

13-X2/E2: LED (orange): key not inserted

41-X1/E2: LED (green): key inserted and locked

21-22 and 31-32: Redundant safety contacts, key position monitoring

41-42 and 51-52: Redundant contacts, solenoid position monitoring

Wiring to PL=e, category 4 conforming to EN/ISO 13849-1 and SIL CL3 conforming to EN/IEC 62061. Wiring method used in conjunction with an XPS safety control unit (the safety interlock switch should be used in conjunction with a safety limit switch to achieve electrical/mechanical redundancy).

Method for machines with long rundown time (high inertia)

Interlocking device for actuating key fitted on guard and zero speed detection.

19-pin M23 connectors

XCSLF3535•• and XCSLE3535••

XCSLF3837•• and XCSLE3837••

XCSE metal

Safety interlock switches operated by actuating key

Page 72

XCSTE plastic

Safety interlock switches operated by actuating key

Page 78

Environmental characteristics

Safety interlock switch type		XCSE (metal)	XCSTE (plastic)
Conformity to standards	Products	EN/IEC 60947-5-1, UL 508, CSA C22-2 no. 14	EN/IEC 62061, EN/IEC 60947-1
	Machine assemblies	EN/IEC 60204-1, EN/ISO 14119	
Product certifications		UL, CSA, CCC, EAC	UL, CSA, CCC, EAC
Maximum safety level (1)		PL=e, category 4 conforming to EN/ISO 13849-1 and SIL 3 conforming to EN/IEC 61508	
Reliability data B _{10D}		5,000,000 (data value for a service life of 20 years can be limited by contact and mechanical wear)	
Ambient air temperature	For operation	-25...+40 °C	-25...+60 °C
	For storage	-40...+70 °C	
Vibration resistance		5 gn (10...500 Hz) conforming to EN/IEC 60068-2-6	
Shock resistance		10 gn (duration 11 ms) conforming to EN/IEC 60068-2-27	
Electric shock protection		Class I conforming to EN/IEC 61140	Class II conforming to EN/IEC 61140
Degree of protection		IP 67 conforming to EN/IEC 60529 and EN/IEC 60947-5-1 (2)	
Cable entry		2 entries tapped ISO M20 x 1.5 (clamping capacity 7 to 13 mm) or tapped for Pg 13.5 cable gland (clamping capacity 8 to 12 mm) or for 1/2" NPT conduit	1 entry tapped M16 x 1.5 (clamping capacity 4.5 to 10 mm) or tapped for Pg 11 cable gland (clamping capacity 7 to 10 mm) or for 1/2" NPT conduit using metal adapter DE9RA1012 with Pg 11 tapped entry
Connecting cable		—	4 x 0.5 mm ²
Materials		Zamak case	Polyamide PA66 fibreglass impregnated case
		Actuating keys (all types): steel XC60, surface treated	

(1) Using an appropriate and correctly connected safety control unit.

(2) Live parts of these switches are protected to some extent against the penetration of dust and water. However, when installing take all necessary precautions to help prevent the penetration of solid bodies, or liquids with a high dust content, into the actuating key aperture. Use of XCSZ27 (with XCSE) or XCSZ28 (with XCSTE) blanking plugs for unused key slots can reduce the penetration of unwanted elements (one blanking plug is delivered with the product). Not recommended for use in saline atmospheres.

Contact block characteristics

Rated operational characteristics	2 and 3 contacts, slow break	XCSE, XCSTE: ~ AC-15, B300: $U_e = 240\text{ V}$, $I_e = 1.5\text{ A}$ or $U_e = 120\text{ V}$, $I_e = 3\text{ A}$ All models: ~ DC-13, Q300: $U_e = 250\text{ V}$, $I_e = 0.27\text{ A}$ or $U_e = 125\text{ V}$, $I_e = 0.55\text{ A}$ conforming to EN/IEC 60947-5-1
Conventional thermal current in enclosure		XCSE, XCSTE 2 and 3 slow break contact versions: $I_{the} = 6\text{ A}$
Rated insulation voltage	2 and 3 contacts	3 contacts (XCSE), 2 contacts (XCSTE): $U_i = 500\text{ V}$ conforming to EN/IEC 60947-1; $U_i = 300\text{ V}$ conforming to UL 508, CSA C22-2 no. 14
Rated impulse withstand voltage	2 and 3 contacts	3 contacts (XCSE), 2 contacts (XCSTE): $U_{imp} = 6\text{ kV}$ conforming to EN/IEC 60947-5-1
Positive operation		NC contacts with positive opening operation conforming to EN/IEC 60947-5-1, Section 3
Resistance across terminals		$\leq 30\text{ m}\Omega$ conforming to EN/IEC 60947-5-4
Short-circuit protection	2 and 3 contacts	3 contacts (XCSE), 2 contacts (XCSTE): 10 A cartridge fuse type gG (gl)
Connection	Screw clamp terminals	3 contacts (XCSE), 2 contacts (XCSTE): Clamping capacity, min: $1 \times 0.5\text{ mm}^2$, max: $2 \times 1.5\text{ mm}^2$ with or without cable end

Complementary characteristics

Actuation speed	Maximum: 0.5 m/s, minimum: 0.01 m/s
Resistance to forcible withdrawal of actuating key (locked)	XCSE: $F_{1max} = 2600\text{ N}$; $F_{Zh} = 2000\text{ N}$; XCSTE: $F_{1max} = 650\text{ N}$; $F_{Zh} = 500\text{ N}$
Mechanical durability	XCSE: > 1 million operating cycles XCSTE: 1 million operating cycles
Maximum operating rate	For maximum durability: 600 operating cycles per hour
Minimum force for extraction of actuating key (not locked)	$\geq 20\text{ N}$
Materials	Body and head: Zamak (XCSE) Body and head: polyamide PA66, fibreglass impregnated (XCSTE)

Electrical durability

- Conforming to EN/IEC 60947-5-1 Appendix C
- Utilization categories AC-15 and DC-13
- Maximum operating rate: 3600 operating cycles/hour
- Load factor: 0.5

XCSE 3-contact and XCSTE 2-contact version, slow break

AC supply
50/60 Hz ~
~ inductive circuit

DC supply ~
Power broken in W for
5 million operating cycles.

Voltage	V	24	48	120
~	W	13	9	7

Safety detection solutions

Safety interlock switches

Key-operated with solenoid, turret head (1)

XCSE metal, 2 cable entries

Type of switch

Locking on de-energization and unlocking on energization of solenoid (2)

LED indication

Orange LED: "guard open" signaling (not available on 3NC main contact models).
Green LED: "guard closed and locked" signaling.

Solenoid supply voltage

24 V $\overline{\text{---}}$ or $\sim$ (50/60 Hz on $\sim$)	48 V $\overline{\text{---}}$ or $\sim$ (50/60 Hz on $\sim$)	110/120 V $\overline{\text{---}}$ or $\sim$ (3) (50/60 Hz on $\sim$)	220/240 V $\overline{\text{---}}$ or $\sim$ (3) (50/60 Hz on $\sim$)
---	---	--	--

Types of auxiliary contacts actuated by the solenoid (locking contacts). Contact states represented with actuating key inserted and solenoid not energized.

3-pole NC + NC + NC slow break		XCSE8312 ⊖ (4)	XCSE83127 ⊖ (4)	-	-	-
Weight (kg)		1.140	1.140	1.140	1.140	1.140

References of switches with locking on energization and unlocking on de-energization

To order a safety interlock switch with locking on energization and unlocking on de-energization of the solenoid, replace the second number (3) with 5 in the references shown above. Example: XCSE5312 becomes **XCSE5512**. For these models, the auxiliary contacts states are also represented with key inserted and solenoid not energized. 2 NC auxiliary contact models cannot be ordered with locking on energization. Some references with locking on energization may not be available.

References of switches with locking on de-energization and unlocking on energization with emergency release by mushroom head pushbutton

To order a switch with locking on de-energization and with emergency release pushbutton replace the second number (3) with 4 in the references shown above. Example: XCSE7312 becomes **XCSE7412**. Some references with trigger action mushroom head pushbutton may not be available.

References of switches with 2 cable entries tapped Pg 13.5 or 1/2" NPT

To order a switch with 2 cable entries for Pg 13.5 cable gland:

- replace the last number (2) with 1 in the selected reference. Example: XCSE5312 becomes **XCSE5311**.
- for switches with 7 at the end of the reference, replace the 2 before the 7 with 1 in the selected reference. Example: XCSE73127 becomes **XCSE73117**.

To order a switch with 2 cable entries for 1/2" NPT conduit:

- replace the last number (2) with 3 in the selected reference. Example: XCSE5312 becomes **XCSE5313**.
- for switches with 7 at the end of the reference, replace the 2 before the 7 with 3 in the selected reference. Example: XCSE73127 becomes **XCSE73137**.

Some Pg 13 and 1/2" NPT references may not be available.

References of actuating keys

See page 73

(1) Head adjustable in 90° steps through 360°. Blanking plug for operating head slot included with switch.

(2) A key-operated lock (2 keys included with switch) enables forced opening of the interlocking mechanism, by authorized personnel, allowing withdrawal of the actuating key and subsequent opening of the NC safety contacts (auxiliary release).

(3) For use on 110/120 V $\overline{\text{---}}$ or 220/240 V $\overline{\text{---}}$, remove the LED indicator module.

(4) Switches supplied with a single green LED.

(5) Actuating keys to be ordered separately (see page 73).

Other versions: please consult our Customer Care Center.

Schemes

Contact states are represented with the actuating key inserted and the solenoid not energized.

Note: These schemes are given as examples only, the designer should refer to the relevant safety standards for guidance.

Wiring to PL=b, category 1 conforming to EN/ISO 13849-1

Example with 3-pole NC + NO + NO contact and protection fuse to help prevent shunting of the NC contact, due to either cable damage or tampering.

(1) Signaling contact

Wiring to PL=d, category 3 conforming to EN/ISO 13849-1

Example with 3-pole NC + NO + NO contact with mixed redundancy of the contacts and the associated control relays. To activate K1, it is necessary to remove and re-insert the actuating key when the supply is switched on.

H1: "Actuating key not inserted" indicator

Schemes (continued)

Contact states are represented with the actuating key inserted and the solenoid not energized.

Note: These schemes are given as examples only, the designer should refer to the relevant safety standards for guidance.

Safety detection solutions

Contactless RFID safety switches

XCSR standalone, daisy-chain and single models

Unique code (high level coding)

Standalone models

- Unique code, high-level coding conforming to EN/ISO 14119
- 2 OSSD safety outputs
- Embedded EDM (external device monitoring)
- Manual or automatic start/restart depending on model
- Male 8-pin M12 connector
- IP 69K
- Numerous possible mounting configurations due to rotary transponder and symmetrical design
- Operation possible without safety control unit

Category 4/PL = e and SIL3

XCSRC11AM12 and XCSRC11MM12
Unique pairing (1)

XCSRC31AM12 and XCSRC31MM12
Two new pairings possible (2)

Page 88

Daisy-chain models for series connection

- Unique code, high-level coding conforming to EN/ISO 14119
- Up to 20 switches can be connected in series without impacting the safety level
- 2 OSSD safety outputs
- 2 male 5-pin M12 connectors for direct series connection
- IP 69K
- Diagnosis of the whole chain of switches possible using the optional diagnostic module (see page 91)
- Numerous possible mounting configurations due to rotary transponder and symmetrical design

Category 4/PL = e and SIL3 (if combined with an appropriate safety control unit category 4/PL = e - SIL3)

XCSRC12M12
Unique pairing (1)

Functions				
Functions		- Operation possible without safety control unit - Manual monitored or automatic restart depending on model - External device monitoring (EDM)	- Integrated series connections - Connection to a safety interface (safety relay, for example) - Series diagnostics (with XCSR210MDB diagnostic module)	- Point-to-point connection to a safety interface (safety controller or safety PLC, for example)

(1) The switch safety function has been assessed by TÜV Nord, not by UL.

(2) With an appropriate, correctly connected safety control system for daisy-chain and single models.

(3) Use a safety extra-low voltage (SELV) or protected extra-low voltage (PELV) power supply.

Safety detection solutions

Contactless RFID safety switches
XCSR standalone model
Unique code (high level coding)

Type	Standalone contactless RFID safety switches
	Connection via M12 connector

References

XCSRZE

XCSRZSRC1

XCSRZSTK1

Diagnostic module for daisy-chain RFID safety switches

The **XCSR210MDB** module interprets the diagnostic data from the whole chain of switches and makes this information available in Modbus registers.

There are two RJ45 Modbus communication connectors available for connecting external peripheral devices (such as an HMI terminal, for example).

Main characteristics of the diagnostic function:

- It provides the state of all the **XCSRC●M12** switches monitored by the safety chain.
- It identifies which protection devices are open or closed.
- It helps to prevent a restart of the machine if the chain has been unintentionally or deliberately tampered with; if an error has been detected on any of the safety switches; or if any of the wiring becomes disconnected.
- It detects if the **XCSRZE** loopback device is not connected and helps to prevent restarting until the loopback device has been reconnected and a new power cycle completed.

Description	For RFID safety switches	Reference	Weight kg
■ Modbus RTU ■ 2 RJ45 outputs ■ 2 LEDs ■ 1 volt-free contact representative of the state of the chain	XCSRC12M12, XCSRC32M12	XCSR210MDB	0.100

Loopback device for daisy-chain RFID safety switches

Description	For RFID safety switches	Reference	Weight kg

Mounting

Examples of face-to-face mounting configurations (recommended)

Example of side-by-side mounting

Minimum mounting distances between safety switches

e: minimum recommended mounting distance between reader and transponder

Detection curves

Face-to-face mounting (recommended configuration)

Sao and Sar sensing distances along Y axis as a function of Z
Longitudinal misalignment for $X = 0$

Sao and Sar sensing distances along X axis as a function of Z

Transverse misalignment for $Y = 0$

Side-by-side mounting

Sao and Sar sensing distances along Y axis as a function of X
Longitudinal misalignment for $Z = 0$

Sao and Sar sensing distances along Z axis as a function of X
Transverse misalignment for $Y = 0$

Sao: Assured operating sensing distance

Sar: Assured release distance

: e: minimum recommended mounting distance between reader and transponder

Schemes Note: these schemes are given as examples only, the designer should refer to the relevant safety standards for guidance.

Standalone contactless RFID safety switches: XCSRC11AM12, XCSRC11MM12, XCSRC31AM12 and XCSRC31MM12

Example of Category 4/PL = e/SIL 3 connection, with monitored start (1) and monitoring loop for contactors (EDM)

(1) The restart command is effective after the operator has pressed and released the restart button. See Note (4).

(2) Schneider Electric product. The power supply must meet the requirements of standard IEC 60204-1 relating to safety extra-low voltage (SELV) or protected extra-low voltage (PELV) power supplies.

(3) 1 A max.

(4) Restart button.

(5) The use of arc suppressors is recommended for KM1 and KM2.

Daisy-chain contactless RFID safety switches: XCSRC12M12 and XCSRC32M12

Example of Category 4/PL = e/SIL 3 series connection to an XPSUAF

1 XCSRZE loopback device (see page 91)

2 XZCR1111064D jumper cables (see page 92)

3 XZCP11V12L or XZCP12V12L pre-wired connectors (see page 92)

A1, A2 Power supply

Y1 Control output (DC+) of start input

Y2 Input channel (CH+) of start input

S11, S21 Control outputs (DC+) of safety-related inputs

S12, S13, S22, S23 Input channels (CH+) of safety-related inputs

(1) The start function is configured by means of the XPSUAF start function selector.

(2) The diagnostic module (XCSR210MDB), every XCSRC-2M12 switch, and the XPSUAF safety control unit should all be powered by the same power supply.

Single contactless RFID safety switches: XCSRC10M12 and XCSRC30M12

Example of Category 4/PL = e/SIL 3 connection to an XPSMCMCP0802 safety controller

(1) Schneider Electric product. The power supply should meet the requirements of standard IEC 60204-1 relating to safety extra-low voltage (SELV) or protected extra-low voltage (PELV) power supplies.

(2) 1 A max.

(3) Monitoring of contactors (EDM: external device monitoring).

(4) Restart button.

Environment		
Conformity to standards	Products	EN/IEC 60947-5-1, UL 508, CSA C22-2 no. 14
	Machine assemblies	EN/IEC 60204-1, EN/ISO 14119 (Low Level of Coding)
Product certifications		UL, CSA, EAC, ECOLAB
Maximum safety level (1)		PL=e, category 4 conforming to EN/ISO 13849-1 and SIL 3 conforming to EN/IEC 61508
Reliability data B ₁₀₀		50,000,000 (value given for a service life of 20 years, limited by mechanical or contact wear)
Ambient air temperature	For operation	-25...+85 °C
	For storage	-40...+85 °C
Vibration resistance		10 gn (10...150 Hz) conforming to EN/IEC 60068-2-6
Shock resistance		30 gn (11 ms) conforming to EN/IEC 60068-2-27
Sensitivity to magnetic fields		≥ 0.3 mT
Electric shock protection		Class II conforming to EN/IEC 61140
Degree of protection	Conforming to IEC 60529	IP 66 and IP 67 for coded magnetic switches with pre-cabled connection IP 67 for coded magnetic switches with connector on flying lead connection
Materials		Thermoplastic case (PBT) PVC cable (ROHS)
Contact block characteristics		
Rated operational characteristics		U _e : 24 V $\overline{\text{---}}$, I _e : 100 mA max.
Rated insulation voltage (U _i)		U _i : 100 V $\overline{\text{---}}$
Rated impulse withstand voltage (U _{imp})		2.5 kV conforming to EN/IEC 60947-5-1
Resistance across terminals	Contact with LED	57 Ω
	Contact without LED	10 Ω
Protection (of the fuse for the safety control unit protection)		External cartridge fuse: 500 mA gG (gl) (use a UL-recognized Type CC fuse in the United States). Optionally, in series with each switch contact to avoid damage to the internal protection in case of misuse.
Connection	XCSDMC 2-contact model	Pre-cabled, 4 x 0.25 mm ² , length: 2, 5 or 10 m depending on model or 4-pin male M8 connector on 0.15 m flying lead
	XCSDMP 2-contact model	Pre-cabled, 4 x 0.25 mm ² , length: 2, 5 or 10 m depending on model or 4-pin male M12 connector on 0.15 m flying lead
	3-contact model	Pre-cabled, 6 x 0.25 mm ² , length: 2, 5 or 10 m depending on model or 8-pin male M12 connector on 0.15 m flying lead
	XCSDMR 2-contact model	Pre-cabled, 4 x 0.25 mm ² , length: 2, 5 or 10 m depending on model or 4-pin male M12 connector on 0.15 m flying lead
Contact material		Rhodium
Electrical durability		1.2 million operating cycles
Switching capacity	Contact with LED	5...100 mA
	Contact without LED	0.1...100 mA
Insulation resistance		1000 MΩ
Maximum breaking capacity	Contact with LED	3 VA
	Contact without LED	10 VA
Maximum switching frequency		150 Hz

(1) Using an appropriate and correctly connected safety control unit.

Safety detection solutions

Coded magnetic safety switches

XCSDMC compact rectangular

XZCP0941L●

M12 pre-wired connector

XZCP1141L●, XZCP1241L●

XZCP29P11L●

XCSDM●5●●● with XPSUS●

Wiring to PL=e, category 4 conforming to EN/ISO 13849-1 and SIL 3 conforming to EN/IEC 61508. Example with 3-pole 1 NC + 2 NO (1 NO staggered) contact.

Note: these schemes are given as examples only, the designer should refer to the relevant safety standards for guidance.

(1) The start function is configured by means of the XPSUAF start function selector.

ESC: External start conditions.

Safety detection solutions

Coded magnetic safety switches

XCSDMC compact rectangular

XCSDMP standard rectangular, XCSDMR cylindrical

XCSDM●59●● with XPSUDN●

Wiring to PL=e, category 4 conforming to EN/ISO 13849-1 and SIL 3 conforming to EN/IEC 61508. Example with 2-pole 1 NC + 1 NO (staggered) contact.

(1) The start function is configured by means of the XPSUAF start function selector.

ESC: External start conditions.

XCSDM●79●● with XPSUAF

Wiring up to PL=e, category 4 conforming to EN/ISO 13849-1 and SIL 3 conforming to EN/IEC 61508. Example with 2-pole 2 NC contact

(1) The start function is configured by means of the XPSUAF start function selector.

ESC: External start conditions.

Safety functions

Safety modules for monitoring

- Two-hand control station
- Magnetic switch
- RFID safety switch
- Proximity safety switch
- Safety light curtain
- Safety light grids
- Zero speed detection of AC or DC motors
- Enabling switch
- Sensing mat/edges
- Guard switch
- Number of safety contacts extension
- Emergency stop rope pull switches
- Emergency stop
- Monitoring of applications requiring safety time delays

Maximum safety level achieved by the solution

PL e/Cat 4 SILCL 3 5 (EN/ISO 13849-1, EN/IEC 62061)

Function	Central Unit (CPU) (standalone) (2)			
Case dimensions	22.5 x 99 x 114.5			
Main characteristics	■ 8 digital inputs ■ 2 x 400 mA OSSD pairs ■ 4 test outputs ■ 2 status outputs ■ 2 EDM inputs	■ 8 digital inputs ■ 2 x 400 mA OSSD pairs ■ 4 test outputs ■ 2 status outputs ■ 2 EDM inputs	■ 8 or 16 digital inputs ■ 4 test outputs	■ 2 or 4 x 400 mA OSSD pairs ■ 2 or 4 status outputs ■ 2 or 4 EDM inputs
