

EDS DeviceNet TeSys T Readme

Modified February 26, 2018

EDS Compatibility

The following table describes the DeviceNet EDS file compatibility depending on the LTMR firmware version.

LTMR Firmware Version	EDS Compatible Version
FW 1.7	V01.01
FW 1.8	V01.08
FW 2.1 and above	V02.01 or V02.06

Note: EDS V02.06 is recommended for latest firmware as it includes minor compatibility updates.

Network Compatibility

Different DeviceNet EDS file versions cannot be used simultaneously in the same DeviceNet network configuration software. Previous versions must be uninstalled and deleted before installing new EDS version.

Updates and Troubleshooting:

LTMR firmware version details are accessible through SoMove software with TeSys DTM, Magelis HMI, LTMCU, or through communications network reading Modbus register 76.

To manage incompatibility between a newer EDS file and older firmware, take one of the following actions to solve the issue:

- use the EDS file version compatible to the firmware
- update the device firmware compatible with the EDS file version.
