LTMCU / LTMCUF Language Pack Readme
Modified February 26, 2018

Language Pack Compatibility
The following table describes the Language Version necessary depending on the LTMR version that you have. The latest language file is completely backwards compatible with previous LTMR+LTMCU combinations.

LTMR Firmware Version	LTMCU Compatible Language Version	LTMCUF Compatible Language Version
FW 1.7 – 1.8	LTMCU not available	Not available
FW 2.1 – 2.4	1.100 or 1.200 or 1.300	1.440
FW 2.5 – 2.6	1.200 or 1.300	1.440
FW 2.7 or higher	1.300	1.440

Version Updates and Troubleshooting:
Upon powering up the LTMCU, the firmware version and the languages version loaded in LTMCU are displayed for one second. Example as shown below:

LTMCU firmware version: FW 1.2

LTMCU language version: 1.200

An "Error in language" message will be displayed when powering up the LTMCU if the LTMCU is not loaded with compatible language version as defined in the table above.
Example as shown below.

This message can be cleared and will not inhibit the correct operation of LTMCU.
However, the new parameters introduced in the updated LTMR firmware will not be available; therefore, it is recommended to update the Language Pack to the latest version.
