# Closed Tank Float Switches <br> Flange Mounted <br> Class 9037, Types ER, EW 

INTRODUCTION AND SPECIFICATIONS

## INSTALLATION

Use the float switch to control the liquid level automatically in a closed tank. The float switch can be set in the field to either open or close contacts on rising liquid. Floats and rods are supplied in appropriate kits. See Tables 2-5.

Sump Operation: Contacts close on liquid rise. (See float positions 1 and 3, Figures 1 and 3, for proper float and rod mounting).
Standard Operation: Contacts open on liquid rise. (See float positions 2 and 3, Figures 2 and 3 , for proper float and rod mounting).
Table 1: Class 9037, Types ER and EW Double-Pole Device Ratings

| Electrical Ratings |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No. of Poles | Voltage | Horsepower |  |  | Control Circuit Rating |
|  |  | Single Phase AC | Polyphase AC | DC |  |
| 2 Pole | 115 Vac | 2 | 3 | 0.5 | A600 |
|  | 230 Vac | 3 | 5 | 0.5 |  |
|  | 460/575 | - | 1 | - |  |
|  | 32 | - | - | 0.25 |  |
| Temperature Ratings |  |  |  |  |  |
| -40 to +185 ${ }^{\circ} \mathrm{F}\left(-40\right.$ to $\left.+86{ }^{\circ} \mathrm{C}\right)$ |  |  |  |  |  |
| Pressure Rating |  |  |  |  |  |
| 50 psi |  |  |  |  |  |
| Enclosure Rating |  |  |  |  |  |
| For Type ER: NEMA 7 \& 9 For Type EW: NEMA 4 |  |  |  |  |  |

Mount the float switch directly to the tank using the four 13/16 in. diameter mounting holes provided in the flange. Flange gaskets are not provided, but may be desirable. The recommended size of the hole in the tank is 4-3/16 in. For a wiring diagram, refer to Figure 5 on page 4.

## DANGER

HAZARDOUS VOLTAGE
Disconnect all power before installing or servicing this equipment.
Failure to follow this instruction will result in death or serious injury.

## A WARNING

## HAZARDOUS ATMOSPHERE

- To prevent explosion, the integrity of the enclosure must be maintained.
- Disconnect all power before opening the enclosure.
- Flange surfaces must be clean and free of scratches or nicks.
- Flange bolts must be torqued to $145-155 \mathrm{lb}-\mathrm{in}(16.4-17.5 \mathrm{~N} \cdot \mathrm{~m})$ before applying power.
Failure to follow these instructions can result in death or serious injury.

## MOTOR PROTECTION

## ADJUSTMENT

## FLOAT POSITIONS AND ROD KITS

$\mathrm{P}=$ (post clearance dimension) is 2-5/8 in. for short post models. On long post models (Types ER/EW-9 and -13) this distance is $4-11 / 16$ in.

Figure 1: Float Position 1 - Vertical mounting, sump operation; contacts close as liquid level rises.

These switches do not provide motor protection. They can be used as a pilot to operate an overload-protected starter. Contact your Square D sales representative for information on a complete line of motor starters.

Each float switch is factory set to a specified float travel for a given length of rod. Reasonable adjustment of float travel can be made in the field. By turning adjustment nut A downward and nut B upward, float travel will be decreased. The reverse will increase float travel.

The float switch can be mounted in three positions as shown in Figures 1-3. Refer to Tables 2-5 for rod kits that are available for these positions.
