VBII Selection and Application Guide

# Safety Switches

[usa.siemens.com/safetyswitches](http://usa.siemens.com/safetyswitches)

# You asked for it. Siemens listened.

Siemens asked contractors for everything they wanted in an enclosed safety switch. Their input helped create the toughest, most reliable, most hassle-free enclosed safety switch in the business – the Siemens Type VBII Safety Switch. It's a switch that's right for any commercial, industrial or special use application. The Siemens Safety Switch line offers a list of important features that gives contractors a competitive edge:

- Highly visible, easy-to-grip red handle
- Visible blade construction
- Door that opens greater than 180°
- Quick-make, quick-break mechanism
- 200% optional neutrals (100-600 Amps)
- All copper current-carrying parts on heavy duty switches (except lugs)
- Positive two- and three-point mounting

## Ratings

- 30-1200 amps
- 240 and 600 volts AC
- 250 and 600 volts DC
- 100 AIC for general duty switches
- 200 AIC for heavy duty switches
- Design E horsepower rated
- Suitable for use as service equipment
- Provisions for UL Class T, R, J, L and H fuses
- 12X overload rating that exceeds industry standard of 10X

# One tough switch: Siemens Type VBII Safety Switch

Siemens now offers a complete line of enclosed switches featuring unique and innovative designs that are unparalleled in the industry.

## General and Heavy Duty switches feature a time-proven design

Like the time-proven Vacu-Break design, the Siemens VBII double-break switching action breaks the arc in two places. This reduces heat generation and increases switching speed by doubling the breaking distance. The result is enhanced performance and increased longevity. We also provide the most visible blade design available today. Unlike conventional knife blade switches, the blades are self-aligning to ensure positive contact. In addition, they have no wear and friction point since the “electrical hinge” has been eliminated. The result is a very fast, positive and reliable switching action for even the most severe applications.

## One tough switch: More rugged and durable in demanding applications

Siemens engineers tackled the problem of designing a switch that would stand up under

the most demanding industrial conditions, such as those in steel mills and mining operations. These environments require a switch that must work reliably and safely in the midst of falling liquids, airborne fibers, dust, metal particles, coolants and other contaminants.

## Tested and retested

All Siemens safety switches have been tested not only to meet but to exceed all UL requirements. These tests include those for general purpose enclosed switches and those designed for more specialized purposes where applicable. The result is a rugged, reliable design that will provide superior performance in a wide variety of applications.

# General and heavy duty features

## Type VBII Safety Switch

### Application

#### General duty switches

General Duty Switches are intended for applications where reliable performance and continuity of service are needed, but where duty requirements are not severe and usual service conditions prevail. These switches are intended for use primarily with supply circuits rated 240V AC or less where the available fault current is less than 100,000A when used with Class R or T fuses or 10,000A max. when used with Class H fuses.

### Application

#### Heavy duty switches

Heavy Duty Switches are intended for use in applications where:

1. Rugged construction, reliable performance, continuity of service and ease of maintenance are emphasized
2. Available fault currents higher than 10,000A are likely to be encountered, such as in manufacturing plants, mass production industries and commercial, institutional and other large buildings served by network systems or transformers of higher capacities
3. System voltage is 600V AC or DC max
4. A Type 12 or 4 / 4X enclosure is required

### Short-circuit withstand ratings

#### General duty switches

Suitable for use on systems capable of delivering not more than 100,000 RMS symmetrical amperes of fault current when Class R fuses are installed. Also rated 100,000 AC max. in 200-600A ratings with Class J and T fuses.

### Short circuit withstand ratings

#### Heavy duty switches

Suitable for use on systems capable of delivering not more than 200,000 RMS<sup>①</sup> symmetrical amperes of fault current when Class J or R fuses are installed except the 800 and 1200A switches, which are suitable for use on circuits capable of delivering not more than 200,000 RMS symmetrical amperes of fault current when Class L fuses are installed. 100-1200A switches with Class T fuses and field adapter kit are also 200,000 RMS symmetrical rated.

### Fuses

#### General duty switches

Fusible switches will accept the following UL class fuses:

Class H

Class K

Class R—Class R fuse clip rejecter kits are required.

Class T—200-600A switches (200A switches require field adapter kit)

#### Heavy duty switches

Fusible switches will accept the following UL class fuses:

Class H

Class K

Class R—Class R fuse clip rejecter kits are required

Class J—240 and 600V switches 600V switches are field convertible

Class L—800 and 1200A switches only

Class T—100-1200A switches (100 and 200A switches require an adapter kit)

### Cover interlocks

#### General duty switches

Defeatable-cover interlocks on Type 1 switches and 60-600A Type 3R switches prevent the switch door from being opened when in the ON position.

#### Heavy duty switches

Defeatable dual cover interlocks are standard on all heavy duty switches. Prevents cover from being opened when switch is in the ON position and prevents switch from being turned ON when door is opened.

### Padlocks

#### General and heavy duty switches

Padlockable cover latch and multiple padlock provisions on handle.

### NEMA specifications

Meets NEMA standard KS-1-1990 for type GD and HD switches.

① 100,000 RMS for 60 A compact non-fusible switches.

**Underwriters’ Laboratories Inc.**

Listed by UL under file #E4776 as enclosed switches and also suitable for use as service equipment except on 1200A switches on Y systems of more than 150V to ground.

Meets UL98 standard for enclosed switches and enclosures.

Type 1 switches—general purpose enclosures (Type 1)

Type 3R switches—rainproof enclosures (Type 3R)

Type 4/4X switches—special purpose enclosures (Type 4/4X)

Type 12 switches—special purpose enclosures (Type 12).

**Groundable neutrals**

General and Heavy Duty Switches designed for use on systems requiring neutrals to have groundable neutral blocks.

① 400 & 600A fusible, double-throw switches accept only Class J or T fuses.  
 ② 30A general duty switches have fuse clips constructed of spring type copper.  
 ③ Not supplied on 30A outdoor & plug fuse switches.  
 ④ 30-200A Type VBII in stainless steel enclosures.  
 ⑤ 60-200A  
 ⑥ 200A general duty switches have aluminum neutral assemblies.  
 ⑦ 100-600A GD and 100-1200A HD switches will accept Class T fuses.

# Type 1 enclosure

**Type 1 enclosures** are intended for indoor use primarily to provide protection against contact with the enclosed equipment in locations where unusual service conditions do not exist.

## Features

- Tangential knockouts in all box surfaces (30-600A HD and 60-600 GD)
- Two- and three-point mounting with top keyhole
- Door that opens greater than 180°
- Formed flange enclosure edges
- 180° plus side opening door Drawn cover design for increased durability and resistance to damage (30-600A)
- Rugged metal handle with a red insulating grip
- Front operable cover interlock release with positive rotating release action (30-1200A heavy duty and 60-600A general duty)
- Metal nameplates on all heavy duty switches

# Type 3R enclosure

**Type 3R enclosures** are intended for outdoor use primarily to provide a degree of protection against falling rain and sleet, and must remain undamaged by the formation of ice on the enclosure. They are not intended to provide protection against conditions such as dust, internal condensation or internal icing.

## Features

- Tangential knockouts in all box surfaces below lowest live parts (30-600A)
- Two- and three-point mounting with top keyhole
- Formed flange enclosure edges
- Formed flange enclosure edges
- 180° plus side opening door
- Double overlap enclosure door top to provide superior protection against entry of rain
- Type HA hub provision  
30A general duty  
release action (30-1200A)
- Type HS hub provision  
(30-200A switches)
- Galvanized steel construction
- Drawn cover design for increased durability and resistance to damage (30-200A)
- Rugged metal handle with a red insulating grip
- Front operable cover interlock release with positive rotating release action (30-1200A heavy duty and 60-600A general duty)
- Metal nameplates on all heavy

# Type 4/4X enclosure

**Type 4/4X enclosures** are intended for indoor or outdoor use primarily to provide a degree of protection against windblown dust, rain, splashing water and hose-directed water. They are not intended to provide protection against conditions such as internal condensation or internal icing. Also meets 4X definition by providing a high degree of protection against corrosion.

## Features (Standard 4X)

- Ground lugs installed as standard
- External mounting feet with two-, three- and four-point mounting
- Formed front gasket flange with continuously welded seams
- Heavy duty front opening low-profile stainless steel latches
- Stainless steel enclosure
- Stainless steel interior parts on 30-200A switches
- Formed out enclosure flanges that prevent liquid entry when door is open
- Rugged hinge design
- 180°-plus opening door
- Rugged metal handle with a red insulating grip
- Front operable cover interlock release with positive rotating release action (30-1200A heavy duty)
- Stainless steel nameplate

## Features (Non-Metallic 4X)

- External mounting
- Ground lug installed as standard
- Fiberglass reinforced polyester enclosure
- No external metal parts
- Removable door for easy wiring
- Front operable cover interlock release with positive rotating release action

# Type 3R/12 enclosure

**Type 3R / 3S** enclosures are intended to provide a degree of protection against windblown dust, and to allow operation when ice-laden. They are not intended to provide protection against conditions such as condensation or internal icing.

**Type 12** enclosures are intended for indoor use primarily to provide a degree of protection against dust, falling dirt and dripping water. They are not intended to provide protection against conditions such as internal Command.

### Features

- External mounting feet with two, three and four-point mounting
- Formed front gasket flange
- Unique heavy duty front opening low-profile latches
- Galvanized steel enclosure
- Formed out enclosure flanges that provide an added degree of protection against entry of dust
- Rugged hinge design
- 180°-plus opening door
- 3R / 3S / 12 rating as standard allows outdoor use
- Rugged metal handle with a red insulating grip
- Front operable cover interlock release with positive rotating release action (30-1200A heavy duty)
- Metal nameplates on Type 3S/12 enclosures

# Type 7 and 9 enclosure

**Type 7** enclosures are intended for indoor use in locations classified as Class I, Groups A, B, C or D as defined in the National Electrical Code.

**Type 9** enclosures are intended for indoor use in locations classified as Class II, Groups E, F or G as defined in the National Electrical Code.

## Features

- Molded case switch available in 30-600A ratings
- Cast aluminum enclosure
- External door clamps
- External mounting feet
- Metal nameplate

# General duty switches

## Plug fuse and special application types

### Features

- Compact size
- Visible blade, double-break switching action
- Quick-make, quick-break operating mechanism
- Highly visible ON/OFF indicators
- Padlock-off handle feature
- Door padlock provision
- Bondable neutral (where indicated)
- Lugs suitable for copper or aluminum wire
- 30A cartridge fuse switches rated 100,000 AC with Class R fuses

① Dual horsepower ratings: Std.- applies when non-time delay fuses are installed. Max.- applies when time-delay fuses are installed.

② These switches are UL-listed for application on grounded B-phase systems.

③ Suitable for use on 3-phase motor loads.

④ Service entrance labeled.

⑤ Has provision for ECHA type hub.

⑥ 5 switches per standard package.

⑦ 10 switches per standard package.

⑧ Height reduced switch (45.25 rather than 56 inches in height) for use with 500MCM or smaller conductors.

# Heavy duty switches

## Features

1. Quick-make, quick-break operating mechanism that ensures positive operation
2. Visible blade, double-break switching action
3. Arc chutes dissipate heat and prolong switch life
4. Highly visible red handle grip designed for hook stick operation
5. Defeatable dual cover interlock
6. Center punch provided for field drilling to allow ON padlocking
7. Handle can be padlocked in the OFF position with up to three padlocks with 5/16" hasps
8. Generous top, bottom and side gutters that meet or exceed NEC wire-bending space requirements
9. Informative door labeling, which includes replacement parts list
10. Tangential knockouts through 600A for easy conduit lineup
11. Side-hinged door that opens past 180 degrees for easier wiring
12. Unique enclosure design increases rigidity and prevents cuts and scrapes to conductors and installers' hands
13. Spring reinforced fuse clips that assure reliable contact for cool operation
14. Door latch securely holds door closed and allows cover padlocking
15. Front removable mechanical lugs that are suitable for CU/Al 60°C or 75°C conductors
16. Lugs are field convertible to copper body and to a wide variety of compression connectors
17. Hinged clear line terminal shield with probe holes for inspecting or testing line side terminals
18. Embossed aluminum nameplate on Heavy Duty Switches provides highly visible ON/OFF indication
19. Drawn cover for increased rigidity and resistance to abuse
20. Top key hole and bottom mounting holes provide easy two- or three-point mounting

■ Built to order. Allow 3-5 weeks for delivery.  
 ① Dual horsepower ratings: Std. - applies when non-time delay fuses are installed. Max. - applies when time-delay fuses are installed.

② These switches are UL-listed for application on grounded B-phase systems and are suitable for 3-phase motor applications.  
 ③ When a neutral is required use a field installed neutral kit.

④ Suitable for use as service entrance equipment.  
 ⑤ Also rated Type 3S/3R.  
 ⑥ 304 grade stainless steel.

① 60-600A 3-Pole switches are also rated 600V DC.

② Height reduced switch (45.25 rather than 56 inches in height) for use with 500MCM or smaller conductors.

③ Use 3-Pole switch for 200A applications.

④ Dual horsepower ratings: Std.- applies when non-time delay fuses are installed. Max.- applies when time-delay fuses are installed.

⑤ Suitable for use as service entrance equipment except on 1200 Amp solidly grounded wye systems per NEC 230.95.

⑥ Also rated Type 3S/3R.

⑦ Indicates oversized enclosure (30A switch with 60A lugs in a 60A enclosure or 60A switch with 100A lugs in a 100A enclosure).

⑧ 600V DC & 600V DC horsepower rating shown requires (2) poles to be connected in series.

⑨ 304 grade stainless steel.

① 60-600A 3-Pole switches are also rated 600V DC.

② Compact switch (11.1"H, 6.6"W box less cover and handle). Short circuit withstand rating—100,000 RMS sym. amps.

③ Use 3-Pole switch for 200A application.

④ Suitable for use as service entrance equipment except for 1200 when used on a 480 or 600V grounded wye system.

⑤ Also rated type 3S / 3R.

⑥ Indicates oversized enclosure (30A switch in a 60A enclosure or a 60A switch in a 100A enclosure).

⑦ 600V DC and 600V DC horsepower rating shown requires (2) poles to be connected in series.

⑧ 304 grade stainless steel. For switches with enclosures constructed from 316 grade stainless steel, see page 4-16 of Speed Fax.

# Heavy duty switches

## Type 4/4X & 12 with viewing window

### Description

30–600A, 3-pole 600V max. in fusible and non-fusible versions in Type 4/4X stainless steel and Type 12 enclosures. All allow viewing of visible blade position. 30–200A also allow viewing of indicating type fuses.

### Features

- Rugged installer-friendly enclosure design features a gasket flange with continuously welded seams
- Tool-free cover latches
- Two, three and four point mounting
- Metal handle with large insulating grip features a positive stop in both ON and OFF position
- Ground lugs provided as standard
- Type 12 enclosures are fabricated from galvanized steel and are also rated for 3R/3S outdoor applications
- Type 4X stainless steel switches (30–200A) are provided with stainless steel interior parts
- The widest range of accessories available including 200% neutrals, gold plated PLC auxiliary contacts and isolated ground kits

① 200A switches are also rated 600V DC.

② Maximum HP ratings listed apply only when time delay fuses are used.

③ Also rated 3S/3R for outdoor use.

④ All switches are suitable for use as service entrance equipment. Use outside poles of 3-pole switch for 2-pole application.

⑤ 600V DC and 600V DC horsepower rating shown requires (2) poles to be connected in series.

⑥ 304 grade stainless steel. For switches with enclosures constructed from 316 grade stainless steel, see page 4-16 of Speed Fax.

# Heavy duty

## Special application / Interlocked receptacle switches

### Application

Receptacle Safety Switches provide cord connection protection of heavy-duty portable equipment (welders, infrared ovens, batch feeders, portable conveyors, assembly line fixtures and tools, refrigerator trucks, etc.) under load or fault conditions. All receptacle switches are supplied with 4 prong receptacles. (3 phase, 3W plus ground)

### Description ① ②

Type 12 and 4/4X Receptacle Safety Switches are available with 3-phase, 4-wire grounded type Crouse-Hinds Arktite™ 2 or Pyle-National prewired and mounted receptacles with interlock linkage to the switch mechanism. Insertion or removal of the plug is prevented by the interlock linkage while the switch is in the ON position. Receptacle prevents operation of switch if incorrect plug is inserted.

## Special application 4 and 6 pole switches

### Application

4 & 6 pole switches are commonly used as a disconnecting means for two speed, two-winding motors. Fused switches provide both over current and short-circuit protection. Non-fusible switches normally provide a local disconnection means for two-speed motors, which are remote from their motor controller. 4 pole switches are also used in 3-phase, 4-wire circuits when a switching neutral is required. All 4 & 6 pole switches are service entrance rated.

### Description

4 & 6 pole switches are available in 30-200A ratings and in both fusible and non-fusible versions; 4-pole switches are supplied with either Type 1 or Type 12/3R enclosures. 6-pole switches are available with either Type 12/3R or Type 4X stainless steel enclosures.

■ Built to order. Allow 3-5 weeks for delivery.  
 ① Lugs are aluminum alloy as standard. Optional copper body lugs are available.  
 ② All 4 & 6 pole VBII switches are suitable for use as service equipment when a neutral is installed or equipment ground kit is properly connected.

③ Dual horsepower ratings: Std. – applies when non-time-delay fuses are installed. Max – applies when time delay fuses are installed.  
 ④ Fusible switches accept Class H fuses as the standard. Class R & J fuses can also be installed and increase the rating from 10,000 to 200,000 AIC. For Class J, the load base is moved upward. For class R fuses, rejection kits are required.  
 ⑤ Supplied with factory installed ground lugs.

# Heavy duty

## Special application switches / Non-metallic

### Application

Siemens Non-Metallic Safety Switches have fiberglass reinforced polyester enclosures, which are extremely resistant to a wide range of corrosive atmospheres that can be encountered in waste-water treatment plants and certain other industrial applications.

### Description

30-200A, 600V Max, fusible and nonfusible switches are available in Type 4X enclosures. The fiberglass-reinforced enclosure allows a wide range of operating temperatures and is supplied with a continuous memory retaining gasket for a superior seal against entry of water, dust and other contaminants. The excellent insulating properties of fiberglass virtually eliminate problems caused by internal condensation.

All switches are load break rated and are provided with an equipment ground kit as standard. Class R fuse clip kits and auxiliary switch kits are also available.

### Non-metallic features

- 30, 60, 100 and 200 amp switches
- 240 and 600 volts fusible
- 600 volts non-fusible
- Rated 10,000 AIC with Class H fuses
- Rated 200,000 AIC with Class J or R fuses
- UL-Listed, File E4776
- Horsepower rated
- Suitable for use as service equipment
- Quick-make, quick-break mechanism
- Visible blade construction
- Padlock-off handle feature
- Field installable auxiliary contacts
- Field replaceable line and load bases
- Factory installed ground lug supplied as standard
- Line terminal shields
- Neutrals installed as standard

▲ Built to order. Allow 6-8 weeks for delivery.

① Also used for 240 volt applications.

② Add "L" to end of catalog number for switches less line & load lugs with mounting hardware for crimp type or copper body lugs.

③ 200A switches are also rated 600V DC max.

④ 600V DC voltage and horsepower rating shown requires (2) poles to be connected in series.

⑤ Supplied with factory installed neutral.

⑥ Neutrals not included. Order neutral kit when required.

⑦ Order Molded case switch and enclosure separately.

# General and heavy duty

## Accessories

### Copper lug kits

Heavy duty switches are UL approved to accept field installed copper lug kits.

Switch ampere rating	Copper lug Catalog number	Description
30-60	HLC612	(9) Lugs/Kit #14-4 AWG Cu
100	HLC63▲	(9) Lugs/Kit #14-1/0 AWG Cu
200	HLC64▲	(9) Lugs/Kit #6 AWG-300 Kcmil Cu

HLC612

### Equipment ground kits

Equipment Ground Lug Kits are available for all General and Heavy Duty Switches. They are field installable in Type 1 and Type 3R Switches and are factory installed as standard in Type 4/4X and Type 12 Switches.

Switch ampere rating	Catalog number	Number of terminals	Wire range per terminal (Cu/Al)
30A GD	GSGK60	2	#14-8 AWG
60-200 GD	HG61234	2	#14-4 AWG
30-200 HD	HG61234	2	#14-4 AWG
400 & 600	HG656A	4	2/0-6 AWG
800-1200	HG678	8	#6 AWG-250 Kcmil

HG261234

### Isolated ground kits

Isolated Ground Kits are available on 30-600A Heavy Duty Switches. They are normally used on circuits with a high content of computer or other electronic loading which require a ground which is isolated from the building ground and neutral circuits. The kit includes both isolated and grounded terminals as listed below.

Switch ampere rating	Catalog number	Number of terminals		Wire range per terminal (Cu/Al)
		Isolated	Grounded	
30-200	HG261234	2	2	#14-4 AWG
400-600	HG2656A	4	4	2/0-14 AWG 2/0-6 AWG

▲ Built to order. Allow 6-8 weeks for delivery.  
 ■ Purchase field replacement fit along with lugs.

## Accessories

### Auxiliary contacts

Auxiliary contacts are available only for Heavy Duty Switches. The auxiliary contact are available in 1 normally open and 1 normally closed or 2 normally open and 2 normally closed configurations. Siemens offers a PLC auxiliary switch (30-200A) that has very low resistance for low voltage and current typical in PLC circuits. All auxiliary contacts make after and break before the main switch contacts.

SL0420

■ Built to order. Allow 3-4 weeks for delivery.

- ① Hubs suitable for 3R Switches.
- ② Also suitable for Type 12 applications.
- ③ Neutral Barrier kits are required on 30-100A switches only and only with 1-Phase / 3W or 3-Phase / 4W loads. Compression Lugs mounting kits are required on 400-1200A switches only.
- ④ Provides mounting for a single line or load lug.
- ⑤ Provides mounting for (2) compression lugs per phase on line or load.
- ⑥ Line base lugs (only) are UL approved to accept #14-6 CU/Al cable.
- ⑦ Max. wire size for height reduced switches is 500 kcmil (Cu/Al).
- ⑧ All but 60A GD & Compact HD NF switches are also UL approved for #2 Cu/Al conductors.
- ⑨ All 200A Heavy Duty Switches have a wire range & wire bending space for (1) #6-300 Kcmil (Cu/Al).
- ⑩ Also for 30A oversized heavy duty switches.
- ⑪ Also for 60A oversized heavy duty switches.

① If compression lugs are used for the neutral, order compression lug neutral barrier kit HCL612.

② If compression lugs are used for the neutral, order compression lug neutral barrier kit HCL623.

③ Use compression lug mounting kit per table on previous page.

④ Not applicable to height reduced switches.

# Double throw switches

## Description and application

Double throw safety switches are intended to transfer loads from one power source to another. All two- and three pole double throw switches are suitable for use as service equipment. All are UL listed. Switches are rated for use on systems up to 10,000A when protected with Class H fuses or 100,000A when protected with Class R or Class T fuses. They can also be used to connect a single source of power to either of two loads. In this application it is necessary to field modify fusible switches so that the fuses are on the load side of the switching mechanism. A cover interlock is provided on all ampere ratings. The operating handle may be padlocked in the OFF position.

## Fuse capabilities of fusible switches

Amp rating	Fuse type			
	H	R	T	J
30 & 60A, 240V	Std	Yes (kit)	No	No
30 & 60A, 600V	Std	Yes (kit)	No	Yes <sup>③</sup>
100 & 200A	Std	Yes (kit)	Yes (kit)	Yes <sup>③</sup>
400 & 600A DTF	No	No	Yes <sup>③</sup>	Std <sup>④</sup>

<sup>①</sup> Use HS Type hubs for 30–200A switches; 400A and larger switches do not have hub provisions.

<sup>②</sup> All Heavy Duty double throw switches with catalog numbers starting with “DT” are rated 200,000 AIC max. when protected by Class R, J or T fuses. Fuse ampere rating must not exceed switch ampere rating.

<sup>③</sup> Move load base.

<sup>④</sup> Catalog No. F355SSDTK will accept Class T Fuse only.

<sup>⑤</sup> Four pole switches are not approved for service entrance.

① Three lugs included in kit.

② Includes lugs.

③ Lugs are not included.

④ One lug per kit.

⑤ One per switch required unless otherwise noted.

⑥ One required per pole.

④ For type 4 / 4X stainless steel switches add "S" to end of catalog number.

⑤ For replacement door for heavy duty switches add "DOOR" to end of switch catalog number.

⑥ Lugs included with line and load bases.

⑦ Also for oversized 30A HD switches.

⑧ Also for oversized switch HNF362RL.

# Fuse application and selection data

Siemens enclosed safety switches are designed for fuse versatility. Although Siemens is not a manufacturer of fuses, once the type of fuse needed for a particular application is determined, it's easy to select an appropriate switch.

The proper fuse type for the application is selected using the following parameters:

- Voltage requirements
- Conductor ampacity
- Horsepower requirements
- Maximum available RMS fault-current
- UL fuse class when specified

The compatible fusible safety switch is selected following these parameters:

- System voltage requirements
- Fuse amp ratings
- Available fault current
- UL fuse class
- Environmental conditions
- Number of poles required

## One-Time Fuses

One-time fuses are standard for use in situations calling for 1200 amperes or less with maximum voltages for 250 or 600 volts. Specially designed, current carrying links are connected to contact pieces at the ends of the enclosure. When an overload occurs, the circuit quickly opens and the arc is quenched by granular insulating material that surrounds the current carrying links.

Available in all classes.

## Current Limiting Fuses

This design offers the highest degree of circuit protection among fuses. Inside, usually copper or silver alloy links are embedded in pure quartz sand between heavy copper end blocks. The special design is fast-acting and interrupts during the first half-cycle of a fault. This causes a limitation of both fault peak current and let-through current.

Available in Classes J, L, R and T.

## Dual-element Time-delay Fuses

Dual-element fuses may have time delay designation since these fuses employ two distinctly separate types of elements. One provides overload protection with time delay. (UL states that time delay means having a 10-second operating delay at 500 percent of fuse label rating.) The second provides short circuit protection similar to a single-element fuse. Dual-element fuses are most frequently used on motor loads.

# Fuse application and dimensions

## Class R and H fuses

Class R application: Over-current and short-circuit protection of motors and transformers, service entrance equipment, feeder and branch circuits.  
(General Purpose Protection)

Class R rejection: A UL Class R fuse kit is required that rejects lower-rated fuses (H and K).

Ferrule type 0-60A

Blade type 61-600A

# Fuse application and dimensions

## Class L

Application: Current limiting protection for service entrance equipment, feeder circuits and metering centers.

Rejection: Its unique dimensions prevent the substitution of another fuse.

## Class T

Application: It combines two highly desirable features – a high degree of current limitation and a small physical size. Panelboards, Switchboards and Metering Center.

Rejection: Its unique dimensions prevents the substitution of another fuse.

Class L Blade Type 601-800A

Class L Blade type 801-1200A

K5*	1-600A	250 and 600V or less AC	Class H without rejection	100,000A	I <sub>2t</sub> - RK5 up to 100A I <sub>p</sub> - RK5 up to 100A	Feeder circuits
J	1-600A	600V or less	Diff. from Class H	200,000A	I <sub>2t</sub> - Low I <sub>p</sub> - Low	Main & feeder circuits
RK1	1/10-600A	600V or less 250V or less	Class H with rejection feature	200,000A	I <sub>2t</sub> - Slightly>J I <sub>p</sub> - Slightly>J	Main & feeder circuits (motor load small percent)
RK5 (time delay)	1/10-600A	600V or less 250V or less	Class H with rejection feature	200,000A	I <sub>2t</sub> - >RK-1 I <sub>p</sub> - RK-1	Motor starting currents
T	1-1200A	300V AC	Diff. from Class H	200,000A	I <sub>2t</sub> - <J I <sub>p</sub> - <J	Main & feeder circuits
T	1-800A	600V AC	Diff. from Class H	200,000A	I <sub>2t</sub> - =J I <sub>p</sub> - =J	Main & feeder circuits
L	601-6000A	600V or less	Bolt type	200,000A	I <sub>2t</sub> - Low I <sub>p</sub> - Low	Main & feeder circuits

\* Class K5 fuses do not prohibit the use of Class H type fuses in a switch.

# Type VBII Safety Switch

## Ratings and test requirements

### Enclosed switch load ratings

The primary functions of a fusible enclosed switch are to carry current continuously, to provide over current and short-circuit protection, to be capable of disconnecting the circuit, and to provide means for mounting fuses. Safety switches may also have other capabilities covered by load break ratings (in contrast with no-load disconnect switches), such as standard and maximum horsepower ratings and the ability to withstand the maximum I2t energy let-throughs of fuses.

All Siemens safety switches are capable of continuously carrying their full-rated nameplate current at rated voltage. This capability is directly attainable in no-fuse switches and in fusible switches when the fuses are replaced with copper bars, without exceeding permissible temperature rise.

Fuses are capable of carrying their rated current in open air. Under this condition the fuses will not open and will not exceed permissible temperature rise. When fuses are used in a switch or other enclosure, a higher ambient temperature is caused by the switch heat and fuse-generated heat. Since fuses are thermal acting by design, they will not carry full current rating at higher ambient temperatures.

To assist users of fusible equipment, UL requires each fusible switch to carry the statement "Continuous load current not to exceed 80% of the rating of the fuses employed." Good electrical practice may require even further deratings depending on the type of fuse, load, altitude and ambient temperature of the switch location.

### Load break ratings

All Siemens safety switches are load break rated. The load break rating is assigned by UL after the switching unit has successfully performed the following tests for general use enclosed switches:

#### Load break ratings

Switch ampere rating	Number of ON, OFF operations per minute	Number of operations		
		With current	Without current	Total
30-100	6	6000	4000	10000
200	5	6000	2000	8000
400	4	1000	5000	6000
600	3	1000	4000	5000
800	2	500	3000	3500
1200	1	500	2000	2500

### 12X current rating

In addition to the required UL overload testing, all Siemens VBII Safety Switches have been tested at twelve times rated current at 600V AC to assure compliance to automotive and other heavy industry requirements.

### Horsepower ratings

All Siemens safety switches, where appropriate, are horsepower rated. The assignment of such ratings is made by UL only after the switching unit has undergone tests to determine its acceptability. In addition, the unit must successfully perform on an overload test series which includes repeated interruption of the locked rotor current of the motor for which it is to be rated as follows:

#### Horsepower ratings

Max HP rating	Number of ON, OFF Operations per minute	Number of cycles of operation
100	6	50
500	1	10

Most switches have two or more ratings for a particular voltage and current. Siemens safety switches are

UL listed for design E horsepower ratings. With Siemens safety switches no derating is required in most cases. Depending on the switch and its application, various ratings have been achieved. All Siemens switches include a complete list of the ratings on the inside of the cover.

### Horsepower rating charts

The number and variety of horsepower ratings that can be applied to a switching unit makes it impractical, in most instances, to list all such ratings on the front of the unit. Siemens does, however, provide this data by means of a chart on the inside cover.

### Horsepower rating range

UL test procedure include ratings up to 500 HP. Siemens safety switch units in appropriate sizes have successfully passed the locked rotor current interrupting test series for ratings through 500 horsepower at both 480 and 600 volts AC and through 50 horsepower at 600 volts DC.

### Maximum horsepower ratings

The maximum horsepower rating is based upon the largest rating of a time delay fuse: 1) which can be incorporated in the switch and 2) which will permit the motor to be started. Since the fuse has extra time delay, it can hold the starting current of a larger motor longer than a standard fuse.

### Standard horsepower rating

This rating is assigned to a switch after it has successfully completed the locked rotor test series, on the basis of the largest standard fuse rating: 1) which can be incorporated in the switch and 2) which will permit the motor to be started. The standard fuse does not have a designed time delay to allow for motor starting currents.

# Type VBII Safety Switch

## Ratings and test requirements continued

### Multiple-voltage horsepower ratings

A switch may have additional standard and maximum horse-power ratings for different voltages. A switch that is horsepower rated at 240V AC or 250V DC may also have horsepower ratings for motors on 120V AC or 125V DC circuits.

### Multi pole horsepower ratings

A switch may have horsepower ratings applicable to the same current and voltage ratings but with fewer poles if the switch is investigated and found suitable for the assigned rating.

### Short-circuit withstandability

UL test procedures for switches and fuses have been expanded to provide realistic standards of performance with respect to clearing high-level fault currents.

These revised standards deal with the control of destructive energy in the shorted circuit. Two types of potential damage are characteristic of high-level short-circuits: mechanical and thermal. Mechanical damage is caused by the electromagnetic force surrounding conductors; thermal damage is the result of excessive current during the fault-clearing time.

The UL fuse standard defines maximum instantaneous peak let-through current ( $I_p$ ) and maximum destructive energy let-through ( $I^2t$ ) for each fuse (except Class H). Applications of fuses and safety switches on systems having more than 10,000A are available. Short circuits require selections of the proper UL-listed fuses and switches capable of withstanding  $I^2t$  let-throughs. See chart below for withstand ratings on Siemens switches.

### $I^2t$ Rated

Suitability tests for service with ClassH, R, J, L and T fuses have been conducted. Representative switches with test fuses connected in series with each switch were subjected to  $I^2t$  let-through values in excess of the capacities of the largest fuses acceptable by the switches.

To pass the test, the switch must remain operable after being closed into a high-amp available short-circuit current. The test fuse is sized so that higher levels of let-through current and energy will be reached than would ever occur during normal usage in the field. See the chart below for  $I^2t$  ratings on Siemens switches.

### Short-circuit withstand ratings

Fuse rating	Fuse class	Short circuit rating (RMS symmetrical amperes)	
		General duty	Heavy duty
Fusible	Plug	10,000	—
	H or circuit breaker	10,000	10,000
	K	10,000	10,000
	J	100,000	200,000
	R	100,000	200,000
	T	100,000	200,000
	L	—	200,000
Non-Fusible ①	H or circuit breaker	10,000	10,000
	K	10,000	10,000
	J	100,000	200,000 ②
	R	100,000	200,000 ②
	L	—	200,000

① With fuses or circuit breaker in series with switch. Fuse or circuit breaker ampere rating cannot exceed switch ampere rating.

② 60A compact switches are rated 100,000 with 60A max. Class J or R fuses in series with switch.

### $I^2t$ and $I_p$ ratings

Switch rating ampere	$I^2t$ rating (ampere squared seconds)	$I_p$ rating (amps)
30	50,000	14,000
60	200,000	26,000
100	500,000	32,000
200	2,000,000	50,000
400	6,000,000	75,000
600	12,000,000	100,000
800	10,000,000	80,000
1200	15,000,000	120,000

# Type VBII Safety Switch

## Suggested specifications

### A. GENERAL

#### 1. TYPE

1.1. Switches shall be furnished as shown on the drawings and shall be of the type described and specified herein.

#### 2. STANDARDS

Switches shall comply with the following standards:

2.1 UL 98—Enclosed and Dead Front Switches

2.2 NEMA KS 1—Enclosed Switches

#### 3. SUBMITTAL

3.1 Provide outline drawings with dimensions, conduit entry exit locations, cable terminal sizes and equipment ratings for voltage, amperage, horsepower and short-circuit. They also must include replacement parts and accessories.

### B. PRODUCT REQUIREMENTS

#### 1. Switch Mechanism/Handle

1.1 Switch operating mechanism shall be nontearable, positive, quick-make, quick-break such that during normal operation of the switch, the operation of the contacts shall not be capable of being restrained by the operating handle after the closing or opening action of the contacts has started.

1.2 The operating handle shall be an integral part of the box and not of the cover.

1.3 The handle position, combined with large ON and OFF lettering on the nameplate, shall clearly indicate the switch position.

1.4 The operating handle must be made of steel, with no plastic parts other than the handle grip.

1.5 The operating handle shall be provided with a highly visible red plastic grip and must allow for hook stick operation.

1.6 The operating mechanism must be made of steel, with no plastic parts.

1.7 All Heavy Duty switches (Type 1, 3R, 4/4X stainless steel, 4X non-metallic, 12) shall have a dual-cover interlock mechanism to prevent unintentional opening of the switch cover when the switch is ON and prevent turning the switch ON when the cover is open. The cover interlock mechanism shall have an externally operated override but the override shall not permanently disable the interlock mechanism. The tool used to override the cover interlock mechanism shall not be required to enter the enclosure in order to override the interlock.

1.8 30-200A 4X stainless steel switches shall have stainless steel interior parts as standard.

1.9 All switches shall have provisions to accept up to three 5/16 inches hasp padlocks to lock the operating handle in the OFF position.

#### 2. SWITCH INTERIOR

2.1 All switches shall have switch blades that are visible when the switch is OFF and the cover is open. (Type 1, 3R, 4/4X stainless steel, 4X non-metallic, 12).

2.2 Lugs shall be front removable and UL-listed for 60°C or 75°C conductors (30-100A), 75°C conductors (200-1200A) aluminum or copper conductors. Except for 30A General Duty line and load lugs shall be removable with no need to remove line shields and arc suppressors.

2.3 30-100A Heavy Duty switches shall be capable of accepting field installed fuse puller kits.

2.4 Optional copper body and crimp type lugs are to be UL approved for field installation in Heavy Duty 30-1200A ratings.

2.5 Heavy Duty Switches all shall have all-copper current carrying parts other than standard aluminum alloy lugs.

2.6 All current-carrying parts shall be plated to resist corrosion.

2.7 Heavy Duty switches shall have provisions for field installable auxiliary switches. There also must be low current PLC type auxiliary interlock available for 30-200A switches.

2.8 All Heavy Duty switches shall have spring reinforced fuse clips.

# Type VBII Safety Switch

## Suggested specifications continued

### 3. SWITCH ENCLOSURES

3.1 Switch covers shall be attached with pin-type hinges. Except for outdoor General Duty 30A switches, top-hinged doors are not acceptable.

3.2 Enclosures for Type 3R switches through 200A shall have provisions for interchangeable bolt-on hubs in the top endwall. Hubs shall be Siemens Type HS or HA hubs sized as indicated on the plans.

3.3 Switches shall have wire-bending space and lug capacity for one size larger Al/Cu wire than NEC and UL minimum requirements.

3.4 The enclosure shall be finished with [gray baked polyester paint which is electro deposited on cleaned, phosphate pretreated steel (Type 1)], [gray baked polyester paint which is electro deposited on cleaned, phosphate pre-treated galvanized steel (Type 3R & 12)], [a brush finish on type 304 stainless steel (Type 4/4X stainless steel)].

3.5 All Heavy Duty switch enclosures shall have a formed front flange to provide additional strength and rigidity.

3.6 Tangential knockouts shall be provided for switches rated 30-600A in Type 1 and 3R enclosures where permitted.

3.7 Cover latching means for Type 4/4X & 12 rated through 1200A shall be quick-release, lift-lever type.

3.8 Type 12 enclosures shall be dual rated as Type 3S to allow their use in outdoor applications.

3.9 Cover viewing window shall be an available option on 30-400A NEMA 12 and 4/4X stainless steel switches. The window must allow viewing of both visible blades when the switch is OFF and viewing of indicating fuses in 30-200A ratings.

3.10 All Heavy Duty switches shall have metal nameplates, except for non-metallic switches, which must have plastic nameplates.

### 4. SWITCH RATINGS

4.1 All switches shall be UL-listed.

4.2 30-200A Heavy Duty switches shall also be horsepower rated for AC and/or DC as indicated on the plans.

4.3 Switches shall be horsepower rated for design E motors on internal labeling.

4.4 The Heavy Duty switch UL-listed short-circuit current rating shall be: [10,000 RMS symmetrical amperes when used with or protected by Class H or K fuses (30-600 amperes)] [200,000 RMS symmetrical amperes when used with or protected by Class R or Class J fuses (30-600 ampere switches employing appropriate fuse rejection schemes)]. [200,000 RMS symmetrical amperes when used with or protected by Class L fuses (800-1200 amperes)].

4.5 All switches intended for service entrance shall be UL approved for this application.

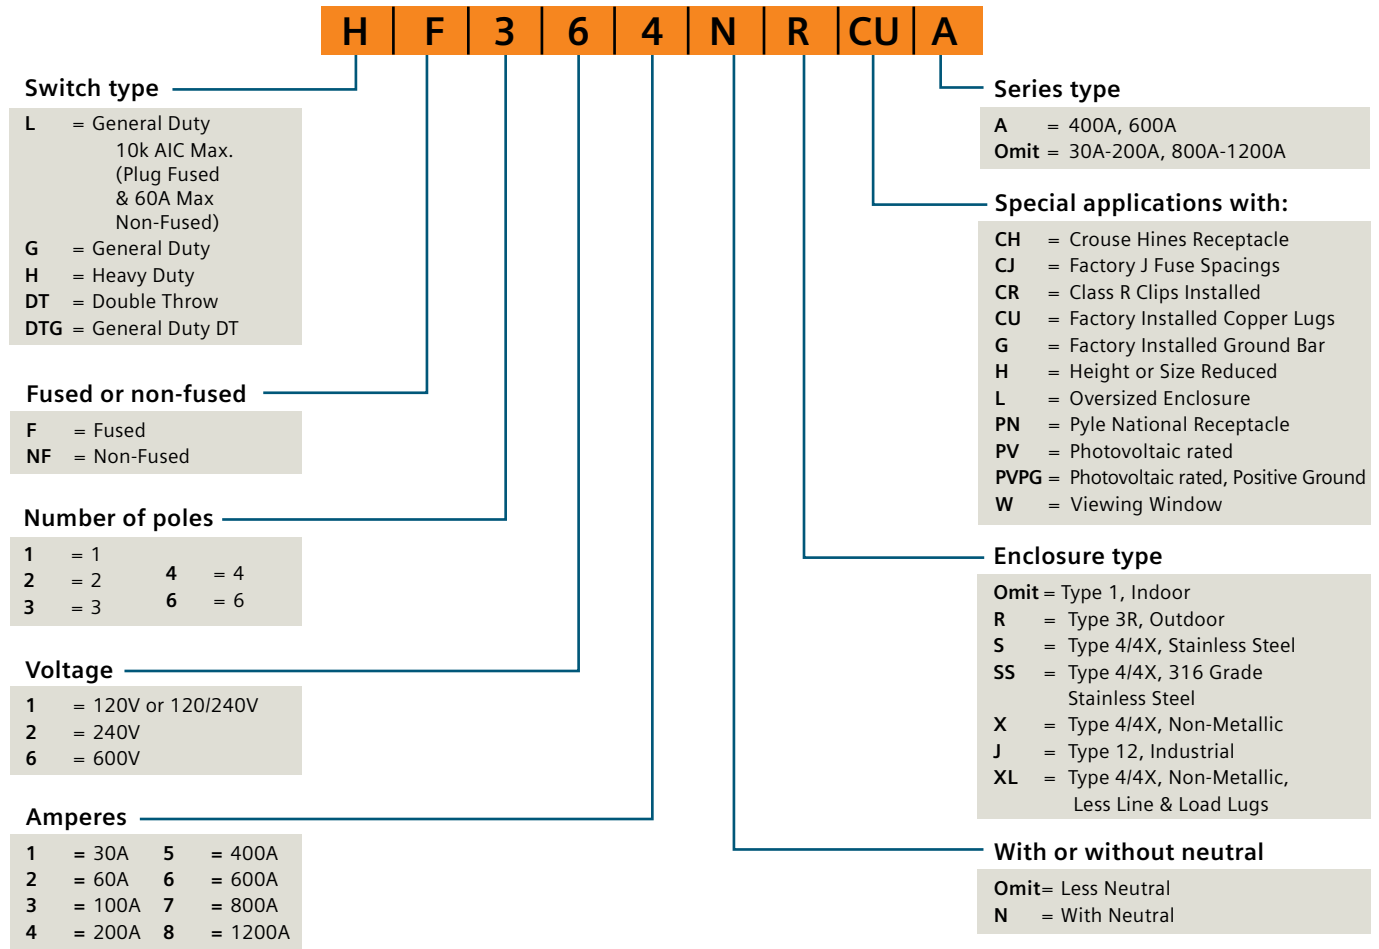

4.6 All Heavy Duty switches shall be I<sup>2</sup>t rated.

### C. APPROVED MANUFACTURERS

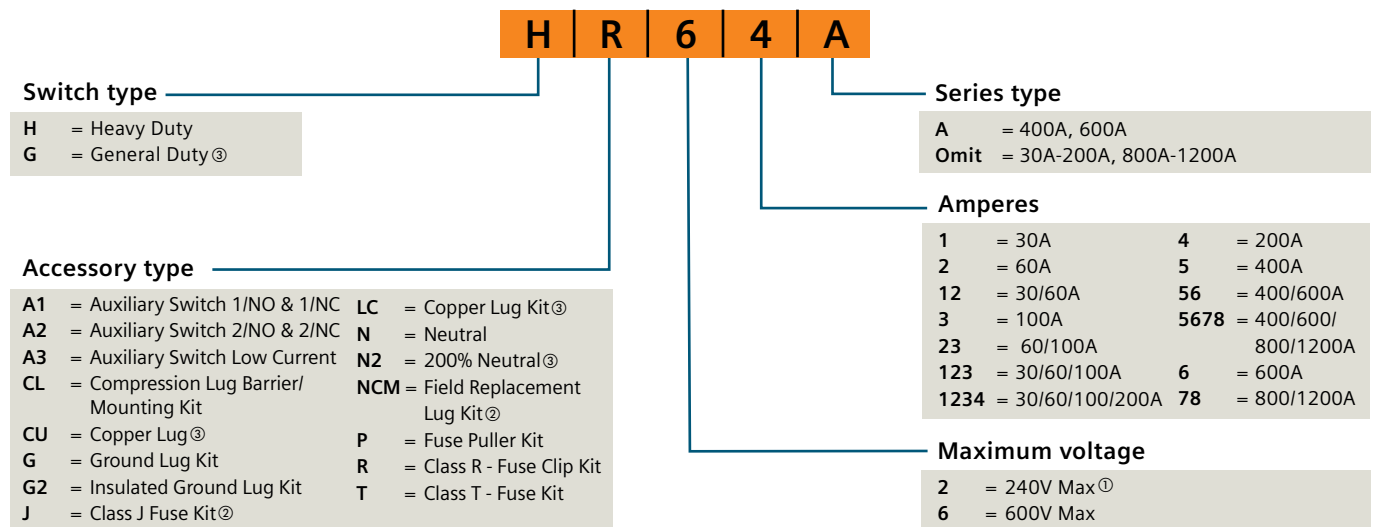

1.1 Switches shall be manufactured by Siemens (no equal) or approved equal.

# Type VBII Safety Switch

## Catalog numbering system

## Accessories catalog numbering system

**Note:** Catalog numbering systems above do not apply to 4-pole & Type "F" & "FR" double throw switches and accessories.

<sup>①</sup> For 400A, 600A use 680V max accessories except for T Fuse Kit.

<sup>②</sup> Only offered for 400A, 600A.

<sup>③</sup> For 30A-200A, 800A-1200A.
